Gerry's chin went up with a little jerk. "Of course I know," she said to Toby, "and I'll be quiet from now on."

THE next morning while she was at work the door opened and Toby walked in.

"Well," he said, "are we all set?"

"All set for what? I told you last night I had to work this morning."

"You can do that when you're on board ship. Come on, get ready!"

"I am not," replied Gerry primly, "a bosun's mate, neither am I a second-class seaman. I do not choose to be ordered around by you or any part of the British navy."

"You may not be capable of piping me over the side, darling," he retorted, "but you're as necessary to me as a bosun. I need you, Gerry!"

"Is this a proposition?" she asked and then regretted it. His eyes looked hurt.

"No," he said quietly, "I don't want anything like that. I'm most awfully fond of you, Gerry."

Gerry was silent.

"Come on—I've got a taxi waiting outside."

She put the cover on her typewriter automatically and went. Why she was going with him, or why she was letting him order her around this way, she did not know.

They got into the taxi, and Toby drew her arm possessively through his. "I thought we'd go down to the harbor," he said, "and have a look at the Ariadne. I want you to see her."

The destroyer was lying out in the harbor like a long, gray seal. There was something lithe and darting about her that made Gerry shiver. She longed for a pencil to write down her first impression, but she was enough of a reporter to take in certain details without it. The number on the Ariadne's bows—H-48—the slight difference in build and tonnage which differentiated her from the other destroyers lying in the harbor—the little row of flags dripping from her mast. They spelled something, she didn't know what. She'd remember them, though.

"Nice ship, that," said Toby calmly, but he didn't fool her.

She knew what it meant to him—his own command—his little world. She was touched that he had wanted her to share it with him.

They had lunch and then went to the movies. Toby held her hand all through the picture, and she wondered what had happened to the old Gerry Potter, who never held hands with anybody, or wasted afternoons looking at B pictures.

WHEN the movie was over he said, "Now what shall we do?"

"I must go back to the hotel," she said firmly, thinking of the unfinished article, the article which had to be sent to New York right away.

"No, you're not going back to the hotel," he said. "You're spending the evening with me."

They found a small restaurant near the docks where the lobster stew was good and the ale strong and bitter. The ale made him slightly talkative.

But it wasn't the story she'd hoped for. It had nothing to do with the Ariadne. He told her about his mother and father, and his dog and his home in Devonshire. He talked about England. She couldn't possibly use any of it, but she found she was intensely interested in what he was saying.

Toby smiled across the table. "Now

## For Quick Relief of HEAD COLD Misery

### Specialized Medication Works Right Where Trouble Is

The instant you put a few drops of Vicks Va-tro-nol up each nostril, it gets right after the sneezy, sniffly discomfort of your head cold. You can feel it go to work as it spreads over the trouble area where most colds start. Shrinks swollen membranes—relieves the clogging congestion—and helps make breathing easier again. Just try it.

And remember . . . if used at the first sniffle or sneeze, Va-tro-nol helps to prevent many colds from developing. Follow directions in package.

## VICKS VA-TRO-NOL

**CHEST COLDS** To relieve misery, rub on Vicks VapoRub at bedtime. Its poultice-vapor action eases coughing, muscular soreness or tightness, loosens phlegm.

**VICKS VAPORUB**

HERE'S THE ONLY MULTI-VITAMIN PRODUCT RECOMMENDED BY THE MAKERS OF VICKS VAPORUB

Beginning to Feel

## OLDER THAN YOUR YEARS?

Nervous? Irritable?

Losing Your Sparkle and Drive? . . . because of daily Vitamin Shortage?

See if you don't soon begin to enjoy renewed energy and interest in life after you start taking just two tiny "VITAMINS Plus" capsules daily. See if you don't feel younger—and look better! Results are usually so good because "VITAMINS Plus" provides protective amounts of ALL the known essential vitamins—the vitamins you must have to enjoy vigorous health. And that's not all! "VITAMINS Plus" actually gives you extra vitamins of the B-Complex and added iron. Try it! Remember...

Life Begins With

## VITAMINS Plus

tell me something about yourself, Gerry."

"There's not much to tell," she said. "I was born in New Jersey, and I went to Wellesley, and I got a job on a newspaper after I left college. I have a couple of parents, and a brother who's in the Marines."

Toby paused, and then asked her why she wasn't married. "What's the matter with the men?" he said. "An attractive girl like you ought to have been snapped up long ago!"

"It's a long story, Toby," she replied. "Not now—some other time." But she knew she'd never tell him.

He paid the check and they left the restaurant.

"Let's take a walk," he said. "There's a small park on the other side of town and it ought to be fairly empty at this hour."

They found a bench under a pine tree, and sat down. Below them lay the huge harbor, masked in darkness. You couldn't see a thing, but you knew it was teeming with life. Gerry shivered and Toby put his arm around her. He drew her toward him and her heart turned over.

"Gerry!"

"Yes, Toby?"

"Love me a little?"

There was a long silence. Love was a dangerous word. You didn't fool around with it; not any more. It could make you lie awake night after night staring into the dark with your eyes burning with unshed tears. It could make you do foolish things and ruin your self-confidence. It could destroy you inside.

Her eyes were growing used to the blackout. She could see the expression on his face as he bent over her. There wasn't anything light about it; he was very serious.

"Gerry, darling! From the first moment I saw you sitting there in the canteen—"

"No, Toby, no!" There was panic in her voice.

"Yes," he said quietly.

His lips closed over hers. She knew how it felt to be drowning in a dark sea, unable to help herself. And as the almost forgotten sweetness swept over her, she thought: I can't bear this again. I can't bear it!

"Say you love me, Gerry!" he commanded gently.

"Yes," she answered. "Yes, I'll say it. I'm afraid to, but I think it's true."

THE next day was Alwyn's turn on shore. Toby had to stay on board the Ariadne until evening. Gerry was disappointed in one way, but relieved in another, because it meant temptation was out of reach. He was coming for her at six-thirty. It was now two-forty-five, and she had three hours in which to finish her article. She got out her typewriter again, digging sentences out of her mind with a pickax.

The door opened while she was trying to describe the harbor without giving information to the enemy, and Joe Billings walked in.

"Heavens, girl!" he greeted her. "Don't you ever stop work?"

"No," said Gerry.

"Well, you've got to stop now. I've brought you some news, sweetheart. We're sailing."

The typewriter ceased firing, and there was a dead silence.

"Well," said Gerry at last, her voice sounding queer in her own ears, "what time?"

"We have to be on board at four o'clock. That's all I know."

"Four o'clock!"

That meant she wouldn't see him again. Unless she could find Alwyn and

get a message out to the ship, she'd be gone before Toby arrived on shore.

She had one hour and fifteen minutes in which to finish her article, do her packing, and find Alwyn. But she had them in the wrong order; she must find Alwyn first.

"Where are you going?" asked Joe.

"I have errands to do," she said.

TOBY jumped out of the Ariadne's gig and came toward her along the windy dock.

"Don't say anything now," he said briefly, walking her past the crowd of sailors and civilians on the dock. "Wait!"

They went to the hotel, and she felt a childish desire to cry with rage, although this was the moment she had looked forward to for weeks. They went up to her room, and she sat down on the

bed and looked at Toby. He began to pack up her things. He got order out of the chaos on the floor, put the half-written pages with the finished stuff on the table, and shoved the whole manuscript into her dispatch case. Then he helped her pack her clothes and her toilet articles, and locked her typewriter.

"You haven't got much time, Gerry," he said.

She put her head down on his shoulder for a moment and was comforted. Then Toby handed her her purse and gloves, and she put on her hat. When she had paid for the room, they left the hotel together. There was a cold September wind blowing in from the harbor.

"I've got to leave you now," Toby said, as they reached the gangplank. "I can't go on board with you."

"Oh, Toby! Toby!" she said softly.

"Why does it have to end so soon? Why couldn't they have waited, so we could have had just one more evening together?"

He didn't answer her. He put his arms around her and held her close without speaking. Then he kissed her the way he had the night before, and her eyes filled with tears.

"Don't, Gerry!" he said. "I'll see you again! I'll see you again, darling, very soon!"

He gave her another kiss, and she walked up the gangplank with a feeling of loss that was terrible. When she looked back, he was smiling at her. She wondered how he could smile.

THERE were only eight passengers on board the freighter: Joe Billings, herself, a man who was on the War Production Board, three WRNS who had been giving pointers to the WAVES, and an Englishwoman with tired eyes who was going home after leaving her children in Montreal. The cabins were small but comfortable, and the food was excellent. They dined with the officers and then went to bed.

Gerry could not sleep. She was awake at two in the morning when the engines began to throb. She could feel the ship slide through the water, turn on her heel, and make for the open sea. When morning finally came, Gerry put on her clothes and went up on deck.

The sea was covered with gray ships. It was a large convoy, well supplied with destroyers. She looked at them and thought of the Ariadne lying in harbor far astern. The freighters were plowing through the water at a snail's pace, for the faster ships had to reduce their speed to the common denominator of the slowest one. The destroyers, however, moved at will under their own rpm. They went speeding up and down the long line of freighters, making S-turns through the convoy and leaving a trail of foam in their wake. Planes occasionally flew over the ship like gulls, dipping and swinging their wings in the sunshine and then zooming away again.

Gerry hung over the rail. She was staring blankly at the blue-gray sea when another destroyer took shape out of the morning mist—a long, lean form crowned with spray. The destroyer came hurtling down the convoy, full steam ahead, and as she drew nearer, Gerry saw the number on her bows.

It was the Ariadne.

"Oh, Toby!" she said with a catch in her breath. "No wonder you said, 'I'll see you again!' Oh, darling, no wonder you could smile at me!"

SHE wanted to laugh and cry at the same time but she did neither. She took out her handkerchief and waved at the destroyer as it went by, and she thought she saw an answering flicker from the bridge. She watched the destroyer disappear into the mist. He hadn't told her, because he couldn't.

A few days later, Joe Billings wanted to know why she spent so much time at the rail, gazing into space.

Gerry's first impulse was to make some flippant reply, and then she thought she'd tell him the truth. She had to tell someone or she would go crazy, and Joe was an old friend.

"There's a man out there," she said, "on one of those destroyers."

"Gosh!" said Joe. "What a story! And the trouble is, you can't write it."

"He's in command of the H-48."

"You mean that tin can that went by half an hour ago?"

"Yes. His name is Fentress—Toby Fentress."

Joe said she had certainly changed her

# How many of these lighting mistakes are you making?

**T**O HELP you protect eyes at home, and to aid in the conservation of critical materials, General Electric asked its home lighting experts to list some of the common mistakes made in home lighting. If you follow these simple suggestions, you'll get more useful light from G-E MAZDA lamps—and you'll be helping to save both materials and electricity.

**1. CHECK ON LAMP SHADES.** Dark linings can absorb half the light you pay for. Why waste good light from G-E MAZDA lamps?

**2. FIVE G-E MAZDA LAMPS** burning in an unoccupied room! That's a peace-time luxury we can dispense with today!

**4. THAT BARE BULB** is doing little good for anyone. Glares in Dad's eyes, doesn't help Mother's sewing. Better turn it out.

**3. NO LAMP!** That's bad. Mother would strain her eyes less with table-lamp (lower right) beside her. Sewing calls for plenty of glareless light.

**5. DON'T BE A LIGHT-MONOPOLIST!** If Dad moved floor lamp to right of his chair, Junior could sit beside him and share good light.

**6. FLOOR IS BAD PLACE** to read. Why not move that chair closer to Dad and make the floor lamp do double duty between them.

**7. LAMP IS POORLY PLACED.** Better move it to that table where Mother is sewing.

**8. DUST AND DIRT ON LAMP BOWLS** and bulbs can waste half the light you pay for. Clean them regularly. Pity to waste half the light from G-E MAZDA lamps when precious eyes need it!

## G-E MAZDA LAMPS

Tune in G-E All-Girl Orchestra every Sunday at 10 p.m. Eastern War Time, over N. B. C. Network.

**9. GOOD EYESIGHT** is one of our most valuable national resources. So don't strain your eyes. Have them examined regularly by a competent eyesight specialist. And remember, G-E research has

worked for over half a century to give you the abundant light of modern G-E MAZDA lamps. Don't throw away the benefits of all those years of lighting research. *Don't waste light!*

type if she could fall in love while on assignment.

"It's all right," said Gerry. "I'm still functioning."

The days passed in slow succession until they were off the Grand Banks. The sky and the sea and the ships were blended into the same dull gray, and occasional flakes of snow flickered through the air. The sea had an evil look, as though God-knows-what was lurking under the surface. Everybody slept fully clothed, and the captain never came off the bridge. Gerry would have been more frightened if she hadn't had implicit faith in Toby's ability to keep the Germans away. She was sleeping peacefully the night the ship's whistle went off.

The sharp blasts that meant "We are in danger!" tore the air like the wail of a banshee, and Gerry was out of her berth almost before she was awake. The whole ship was awake and quivering. She could hear running feet everywhere, but the sound was orderly; there was no sign of panic.

Gerry's cabinmate was calmly putting on her life belt. "Well," she said briefly, "I guess we're for it."

"Yes," said Gerry, "I guess we are."

A trickle of fear ran down her spine; it was over as quickly as it had come. Toby was out there; he'd take care of her somehow.

The deck was crowded with dark forms. Just as she reached her boat station, there was an explosion on the starboard bow, and a column of flame rose into the sky.

"They got her that time," said somebody. "She's hit amidships."

There was another roar as the magazines went up; and then the ship broke in two and disappeared.

A bulky form struggled through the crowd around Gerry's lifeboat. It was Joe; his face looked ashen white in the darkness. He took Gerry by the arm and led her behind a ventilator, away from her fellow passengers.

"Listen, kid," he said.

"Yes, Joe?" she answered, wondering why his voice was so thick and uneven.

"That ship out there," he said, "that tin can that just went down—"

"Was it a tin can?" she said. "I heard somebody say it was a corvette."

"No, Gerry, it was a destroyer. It was the H-48."

She swayed toward him, and he caught her.

"Steady, old girl!" he murmured. "I'm sorry, kid! I'm sorry."

She pulled herself out of his arms and went to the rail. The place where the destroyer had vanished was off the stern now, for the convoy couldn't stop to help the survivors. The freighters had to keep moving. She could see dark forms struggling in the water, and hear faint cries for help. She put her head down on the rail and everything went black; when she came to again, it was dawn, and she was sitting under the lee of the ventilator with her head pillowed on Joe's broad shoulder.

JOE'S office in London was on the Haymarket. It should have been in Fleet Street, but a bomb had removed all traces of the original office long ago. Joe was sitting in his shirt sleeves, pounding out a story, when Gerry walked in. It was the morning after their arrival. She looked at him enviously because he wasn't having any trouble with his story at all. Words were flowing out of him like a river in flood. He glanced up and saw her and stopped work.

Gerry laid a manuscript down upon his desk. "There's the stuff I wrote on board ship," she said. "Read it, Joe, because I'm not sure it's any good. I've got to cable it to New York, if you think it gets by."

"What makes you think it isn't any good?"

"Because it was so hard to write. I can't write any more, Joe! I can't write a word."

"Sit down, kid," said Joe. "I'm sure it's swell, but I'll look it over."

Gerry smoked a cigarette and then powdered her wan face. Joe read fast; it wasn't long before he was through.

"That's all right, Gerry," he said. "But I notice you haven't said a word about the sinking. The boss may kill it."

"I know. But I couldn't write it—I couldn't put it into words."

"I don't blame you."

"A correspondent worth his salt," she added, "would have turned in a good story about it, no matter how he felt."

"No, I don't think so," said Joe. "I don't think so at all." He put the manuscript back in its manila envelope. "You've got to take this stuff over to the

admiralty and have it censored before you cable it," he reminded her. "They'll run a blue pencil through most of it, but don't get sore."

"The admiralty!" said Gerry. "Isn't that where you go to find out about people?"

"Yes, it is. You go to the admiralty annex on the Haymarket."

Her face was a study in hope. Joe looked at her, and he felt a little sick.

"If you need me," he said, "I'll be right here."

She was back within the hour. She sat down quietly and asked for a cigarette.

"Well, Gerry?" he said.

"Missing," she answered.

It was better than knowing the fellow was dead, Joe reflected. There was at least a grain of hope for her to live on. He told her so, and she nodded.

"I feel sure he's alive," she said. "I may be crazy, but I know he's not dead. The next thing is: How am I going to find him?"

Joe frowned.

"The admiralty wasn't much help, either," she added. "They just said they were doing all they could."

"You'll find him some day," said Joe. "Keep your chin up."

GERRY went out into the Haymarket again and spoke to the first sailor she met. He was a little surprised, but eager to help when she explained.

"What would you do if you were trying to find someone who'd been torpedoed?"

"I'd go to the admiralty—"

"I know—I've done that."

"Try the canteen, miss. The sailors who go there sometimes know more than the admiralty."

Gerry pulled wires and became a canteen hostess, working there on Saturday nights, serving coffee and sand-

wiches, and dancing to the strains of a juke box. She was disappointed when she found she was not allowed to question the sailors about their ships, but then the admiralty released the story of the sinking of the *Ariadne*, and she was allowed more latitude. You could talk discreetly about a dead ship.

Every sailor she met was asked the same question, but the answer was always the same, too: "No, miss, I never 'eard of the *Ariadne*."

"It's very strange," she said bitterly one night when she was unusually tired and discouraged, "that no one has! She was on the regular convoy route. She used to go back and forth, back and forth, just like a ferryboat."

Toby's words, but she had used them unconsciously! They came back to her now with a shock.

"Don't give up, miss," advised the sailor whom she had just questioned, as though he had read her thoughts. "You'll find a lad who's been on the *Ariadne*. Everybody comes in 'ere sooner or later."

"No, I won't give up," she replied, ashamed of her outburst. "Not ever."

Joe called for her one night at the canteen. This was odd, because he was usually in the office at that hour. He took her by the arm and walked her across Berkeley Square to the Ritz, and they sat down in the bar. He ordered two double Scotches, and she thought he looked a little queer.

"What's the matter?" she asked.

"I'm tired," he replied. "I had to go down to the naval hospital at Greenwich this morning. Royalty was inspecting, and the office wanted me to do a story because some of our boys are down there."

"Well, go on!" said Gerry, as he paused.

Joe did not look at her. "I found a

**In Line of Duty**—Our boys don't parachute down behind the enemy lines just for a thrill. They risk their lives in the line of duty. Our dollars have a duty to perform too—behind and in front and *over* the enemy lines—in the form of equipment, food, ammunition, supplies of all kinds. And these dollars, unlike our boys, take *no* risk. They are merely *loaned* to Uncle Sam through the purchase of War Stamps and Bonds. Buy as many as you can. Then start making some real sacrifices and buy more.

#### THE ARMY NEEDS BATTERIES

Field equipment and mechanized equipment of all kinds need batteries. Willard makes many of them, including many "special purpose batteries." The same materials go into them, that are used in building *your* automobile battery. So take care of your battery. Make it last. That's the way to *save critical materials*. Your Willard dealer can help you.

**Willard** "SAFETY-FILL" BATTERIES  
-have the power to carry on!

Ask your doctor about wonderful PAZO ointment and the soothing, blessed relief it gives for simple piles. Get PAZO ointment from your druggist today!

THE GROVE LABORATORIES, Inc., St. Louis, Mo.

sailor down there with a severe case of burns. His face was swathed in bandages, but he could talk. He was on the Ariadne, Gerry."

Her heart stopped beating altogether. "What did he say?"

"I think you'd better go and talk to him. Tomorrow. I've made all the arrangements for you to go down there."

"No, I don't want to talk to him," said Gerry, "because I know. I can tell from your expression, Joe, just what he said to you."

Joe was silent. From Piccadilly came the wail of a siren, but neither of them paid any attention to it.

Gerry looked at him with a white face. "Tell me, Joe! Tell me all the details!"

"Nobody on the bridge was saved. All the officers were killed when the magazines blew up. He explained why, but by that time I was so sick—for you, Gerry—that I wasn't listening."

"It's all right, Joe," she said. "Really, it's all right."

Joe thought the way she took it was extraordinary and said so.

THE next morning she went back to work and wrote a story that was one of her best and when they dined together a few nights later, he told her she was all wool and a yard wide.

"Well, what else can I do?" she asked. "I have a job to do. I can't lie down on it now. Besides, writing keeps me from remembering all the time."

The only concession she made was to give up the canteen. She told the senior hostess that she was too busy to work there any longer, but she told Joe the real reason:

"The canteen reminds me too much of the night I met Toby. I just can't take it."

"That's all right, Gerry," he said, "don't worry about it. You're doing enough as it is. You ought to rest nights, anyway. You look as though you'd lost ten pounds."

"Make it fifteen," said Gerry, "and you'll be nearer the truth. Here's a small remembrance for the boy in Greenwich Hospital," she added, handing him a

sizable check. "You needn't tell him where it comes from. He doesn't know the skipper had a girl."

The days passed into weeks, and the weeks became a month. One night as she was walking home, she passed the canteen. It was a Saturday, and she could hear the strains of dance music. She walked on a few paces and then turned back. She stood there on the sidewalk, listening. The juke box was playing a polka.

She could hear laughter and the shuffle of dancing feet. And suddenly she wanted to go inside. She wanted to ask questions again, ask the boys in there if they knew anything about Toby. It was a feeling that came from nowhere, but it was irresistible.

She opened the door of the canteen. It was all just the same. The air was blue with smoke and naval uniforms, and the floor was crowded with dancing couples.

"I'm crazy!" she thought as she put on her apron. "That boy in the Greenwich Hospital—he knew! He was there—he saw it all. Toby's dead—he died when the magazines blew up."

She would have gone if somebody hadn't dropped another sixpence in the juke box. She recognized the melody vaguely, but she couldn't remember the words until somebody began to sing:

"I'll see you again, whenever spring breaks through again..."

You could hear the words and music plainly above the laughter in the room. Who had said those words to her? Toby! He had said them to her instead of goodbye. He was sure he was going to live, that he would see her again. The tune was an omen. She knew she had come in here tonight because hope had never really died, and now she must have faith, too.

She walked out on the floor, and a sailor asked her to dance.

"Look," she said, "did you ever hear of a ship called the Ariadne?"

"Yes," he answered.

"Were you on board her, by any chance?"

"No. But there's a man in here who was. Want to meet him?"

"Yes, if you don't mind," she said, her lips dry.

A moment later she was face to face with the gunner's mate of the Ariadne.

"What—what happened to the skipper?" she asked.

"I don't know, miss," he replied. "The last time I saw 'im, he was swimmin' for a raft."

"Do you mean," she said slowly, "that you saw him after the magazines blew up?"

"Yes, miss. When the bridge went up, he was thrown clear. I saw him swimmin' near me."

"But do you know whether he was saved?"

"He must 'ave been. There was a trawler about, pickin' up survivors. I'm sure he's alive, miss."

"And what about the exec?" added Gerry, wondering what had happened to Alwyn.

The sailor confirmed her fears: "Lieutenant Thomas was killed. That I do know, miss."

SHE finished out the evening and left. Outside in Berkeley Square, the stars were very bright. She walked swiftly up Hay Hill and turned down Piccadilly. The darkness seemed strangely peaceful, strangely beautiful. She entered the hotel and went up in the lift. She was going to call Joe. She could hardly wait to speak to him.

She opened the door of her room and switched on the light.

There was a form lying on the bed—the form of a man in a navy-blue uniform with gold braid on his sleeve. His dark red hair was in need of a haircut, and his breathing was deep and regular, as though it came from utter exhaustion. She crossed the room and knelt down beside the bed.

"Toby!" she said, but he didn't wake up. He was too far gone from weariness to know she was there.

She laid her hand on his cheek for a moment and then put her head down beside him. When he waked, her face would be the first thing he'd see.

THE END

"Well, three more records and our 1,000-play needle will be done for"

ROBERT DAY

## Who is this man the Crawfords didn't want to see?

The Crawfords weren't friendly when he called. They had already made up their minds on the matter.

"I'm not driving my car much," Dick Crawford said. Just to and from the plant. Besides, we can't drive over 35 any more. So why should I need insurance?"

Then the man the Crawfords didn't want to see did some explaining. He called attention to authoritative figures which show that *most* auto accidents actually happen at speeds *under* 35 miles an hour!

Finally it was Mrs. Crawford who decided. She saw that no family could risk the expense of an accident, especially now. So she insisted that Dick insure their car. Now he realizes it was the smartest thing they ever did.

Dick Crawford *did* have an accident—on his way to work. And the other driver was badly hurt.

There was a heavy judgment—far more than Dick could have paid. And if the man the Crawfords didn't want to see hadn't called—if he hadn't convinced them they needed insurance—it would have been disastrous.

Who was this man? He was a representative of the State Farm Mutual Automobile Insurance Company.

*There are 7,000 men like him—ready to advise you about auto insurance in wartime . . .*

They are the 7,000 State Farm representatives in the United States and Canada. Their responsibility is to help save *you* from accident loss.

They are backed by the largest automobile casualty insurance company in the world, one which has saved its policyholders over

\$50,000,000 in the cost of their insurance. They offer insurance protection so reasonable in cost no driver need be without it.

They offer insurance, too, that's geared to wartime conditions. State Farm insurance rates, for example, are adjusted to the type of gas ration card you have. Another example is State Farm's special coverage for pool car drivers. And at all times it is important to know that State Farm auto insurance is non-assessable.

They offer a new type of collision insurance that does a lot to help offset rising repair costs. It is State Farm's unique 80% *Collision Plan* which pays 80% of the cost of repairing collision damage to your car, whether it's just a dented fender or a costly accident. This plan pays 80% of every collision repair bill on your car up to \$250, and 100% of any bill over \$250!

Also important in wartime are State Farm's other automobile insurance coverages. State Farm's Medical Payment Plan pays medical expenses of members of your family and passengers injured in your car, at the lowest cost in history—less than 1c a day. Comprehensive Insurance protects you against loss from fire, theft, and most of the other hazards that threaten your car. Emergency Road Service and Bail Bond Insurance pays 80% of the expenses incurred on a public highway for mechanical first aid, towing, and a number of other services, and reimburses you for 80% of any premium or fee paid for a bail bond. A State Farm representative will be glad to tell you about the advantages of State Farm's life and fire in-

surance, too. (For obvious reasons, the names in this advertisement are fictitious.)

# "See-ability" tells the tale...

**THIS LITTLE LADY** is having fun now, but at the same time, she is proving how priceless *See-ability* is for little folks. Their ability to see clearly for years to come, may easily depend upon the light they have today—light for study and for play.

This is the wrong way to use light. The correct reading position is to sit up straight, with lamp placed to avoid shadows. In the second illustration, full use is made of the lamp. It is close to the table, lighting it without shadows, without glare, and without waste.

It provides the *See-ability* needed to keep young eyes bright. Further suggestions are included in a new booklet: "How to Get More Light for Your Money." Write to the Westinghouse Electric & Mfg. Co., Lamp Division, Dept. R-2, Bloomfield, New Jersey.

In these days when prices of most goods are higher, Westinghouse Mazda Lamps cost less than ever before. And they are made to the same high quality standards that have distinguished Westinghouse lamps for over 50 years.

## Johnny-Quick-on-the-Downbeat

Continued from page 18

*We look back now—our smiles are rueful—*

*By contrast, those old days were booful.*

*Oh, yesterday's tears are tomorrow's laughter.*

*Each time—*

"Stop!" Sally cried.

He stopped. He glanced at her inquiringly. "Too many anapaests?"

"I don't want to hear any more of it," said Sally.

Johnny's face was growing red. "Will you kindly give with reasons?" he asked softly.

"It's a quickie and I don't like quickies."

JOHNNY got up from the bench. His face had a wooden look. "Sally, I've just found out who has been picked to write the music for your picture. If I may speak frankly and dispassionately, those two tin-pan-alley cats haven't come up with anything worthy of the juke-box trade since Heigh, Ho, I Wanna Go Back to Tasco. I am here strictly from altruism. You need something like Tomorrow's Laughter to give your picture class. What's the matter with it?"

Sally shrugged. "Oh, it's not bad. Thirty-two-bar chorus. AABA pattern. Built to the title idea. Faintly reminiscent, of—what was that thing Crosby used to sing a couple of years ago? Not too reminiscent, of course."

"Oh, no," Johnny quickly agreed, "it would never do to have it too reminiscent."

"Just enough so that it will be easy to learn and remember," Sally elaborated. "Then the triplets on the release—just to be a little different. All the tricks, Johnny. You know so many tricks. It's too easy for you. But there isn't a real, a fresh melodic phrase in it."

"Really?" said Johnny, as if he were grateful for every word of it.

"And you," Sally said bitterly, "are the Johnny Hale who wrote Breakfast in Heaven and Clouds Against the Moon! You can write heartbreakingly lovely tunes—and you ask me how I like a fast hack job like this!"

"You really," said Johnny in admiring tones, "sound as if you know what you're talking about. I hate to argue with anyone as beautiful and clever as you are, but, Sally, you do not know songs. You can sing them, you can put them over on the screen, over a mike, or across the footlights, but, baby, you cannot pick them."

"I am going to shower and dress now," Sally said with the serenity that was such an attractive part of her. "I'm expecting some people. Yesterday's laughter is today's tears for both of us, so let's accept it. Goodby, Johnny, and good luck!"

"I have a skin thicker than an armadillo's," said Johnny, "but my nerve ends seem to detect the presence of whisk-broom bristles. Before I go, will you tell me why? You know you're still in love with me."

"That doesn't make any diff—" Sally began. "I am not!" she indignantly corrected herself. She was blushing. "That's all in the past. You are nothing but another tall, tanned man with snowy teeth when you smile."

"In New York," said Johnny in a slightly shaken voice, as he crossed the index and middle fingers of his right hand, "we are like this. You love me. You say so. I love you. I say so. We are nuts about each other, simply nuts. So what happens? With your knowledge and consent, I come to Hollywood to do something about the low blood count of my finances."

"Johnny—"

"You do so nicely on Broadway," he went on, "that you are invited to Hollywood to make a picture. We knew that that was in the cards. We agreed harmoniously that if or when that happened I would write your songs."

"Johnny, please!"

"Because I've always written your songs, because I know your moods and what you can sing and what you can't."

"Johnny, it's no good."

"Isn't it? Even murderers are given a trial before you hang them. So what happens when you come to Hollywood? You refuse to see me. Your agent refuses to let me see you or him. You hang up when I telephone. You throw

# AUTO-LITE SPARK PLUGS

IN SERVICE AT HOME AND ON EVERY FRONT

"Gran'maw—c'mere—the Army wants ter know if Willy is six feet tall!"

## THIS YEAR ALL AMERICA MUST MEASURE UP

Few of us on the Home Front can measure up to the job being done by our men in the Armed Forces. But we can try. Things like building increasingly better, the armaments those men need. Even little things like keeping our cars up to snuff—so they stretch every gallon of gasoline miles farther. That's the job Auto-Lite Spark Plug Dealers can help you do with their

"Plug-Chek" Inspection Service. Actual tests by the American Automobile Association show this new spark plug service can help increase gas mileage as much as 12%.

It's as simple as the ABC which identifies your gas ration book. To make sure you get full measure in miles, ask your nearest Auto-Lite Spark Plug Dealer for a "Plug-Chek" today.

Keep 'em Smiling!

...and help the U.S.O.  
A big 24-page book jam-packed with Paul Webb's famous "Mountain Boys" cartoons will be mailed by us to any man in the service. Just send name and address with dime or War Savings Stamp which the U. S. O. will get in full. Auto-Lite pays all costs of books, envelope, mailing and postage.

IN ITS 26 GREAT MANUFACTURING DIVISIONS, AUTO-LITE IS PRODUCING A LONG LIST OF ITEMS FOR AMERICA'S ARMED FORCES ON LAND, SEA AND IN THE AIR

*"But think of the rubber  
you're saving," urged Elsie*

"DRAT THE RUBBER I'M SAVING!" bellowed Elmer, the bull. "I've been sabotaged. These infernal skates deliberately tripped me!"

"Nonsense," said Elsie, the Borden Cow. "It was just your own clumsiness. Now stop complaining. In times like these, we must all sacrifice till it hurts."

"It isn't the sacrifice that hurts," moaned Elmer, "it's the sitting down."

"What's wrong with sitting down?" asked Elsie. "People just love to sit down to a glass of my rich, creamy Borden's Milk. They show good judgment, too. Milk and milk products rank so high on Uncle Sam's National Nutrition Program that just going around telling people about them makes me feel like Paul Revere."

"I wish I felt like Paul Revere," grumbled Elmer,

feeling his bruises gingerly. "He was lucky . . . he had a horse."

"Speaking of horses," beamed Elsie, "cheese lovers everywhere tell me that wild horses couldn't drag them away from Borden's Liederkranz. And I don't wonder. This tawny-crust, creamy-centered treat is the one American-made dessert cheese that's famous the world over. Of course, it's only one of more than 20 Borden's Fine Cheeses, but . . ."

"Woman," snarled Elmer, "if you ever stop talking, take a few minutes off and help me pick up these papers!"

"If it's picking up, you want," smiled Elsie, bending over to help Elmer, "most folks say there's no pick-up like a glass of Borden's Hemo. It's the new way to drink

your vitamins and like 'em, you know. And it tastes like the grandest malted milk, only more so."

"Very interesting," mumbled Elmer, dusting himself hastily, "but I must be off to the office . . . oof!"

"Oh dear, down you go again," sighed Elsie. "If I fell

down on my job as often as you do just getting to my velvety smooth Borden's Ice Cream would

half as luscious to taste, nor nearly as nourishing.

"And that, I suppose," sneered Elmer, "would panic the entire country into a panic, including the and Navy."

"Nothing could panic those boys," said Elsie. "But both our fighting forces and our allies do on me for plenty of Borden's Evaporated Milk. It

only irradiated with Vitamin D, but it makes scrumptious creamed soups and mashed potatoes.

"Don't say *mashed* so casually, ple-a-se," groaned Elmer. "Unfortunately, it reminds me of the way I

"One way to make a man feel just grand," giggled Elsie, "is to serve him a hearty slice of mince pie with Borden's None-Such Mince Meat, the eatin

spiciest mince meat ever. Won't you agree?"

"Just help me get these blasted skates off my feet and into the Scrap Drive," yelled Elmer, "and I'll do anything."

"Yes," snickered Elsie, "big folks and little folks agree that . . . if it's Borden's, it's got to be good!"

Elsie says: "To stretch the rubber on your car, stretch your legs...don't drive if you can walk."

ny letters in the wastebasket unopened. My name is suddenly hay fever. Why?"

Sally walked to the end of the room. She looked out at the ocean, then turned and came back. She sat down on the olded towel on the piano bench and looked up at the tall, sun-browned young man with the aggrieved blue eyes.

"The night I met you," she said, "was at a cocktail party at the Countess di Maille's. Remember?"

"Yes. I saw you across the room and gave you my assembly-line smile."

"You took me home in a taxi. You were the first man I'd met in New York who didn't, the minute I got into a cab with him, try to give me an osteopathic treatment. It was an amazing experience. You were kind and thoughtful and considerate. I'd been working hard and I was very tired that night. I had never felt so grateful. I liked you immediately."

"Better men than I am," Johnny murmured, "have had both hands paralyzed by love at first sight."

"The more I knew you," Sally went on, "the more I liked and admired you. You weren't Johnny-Quick-on-the-Downbeat then. You were thoughtful and studious and quite serious. It's the way I was brought up, Johnny. That's the type I like. I can't take the quickie type seriously."

"Wait a minute," Johnny broke in.

"You weren't doing so well in New York. You—"

"I went into a horrible slump."

"Yes," she agreed. "We're pretty young. It was probably your first serious slump. All creative people have slumps. Those with real character fight through them and come out on top. They've not only licked the slump but themselves."

JOHNNY was gazing vaguely at her nose. "If—"

"Soon after you came out here," Sally purposefully went on, "these incredible reports began coming east. You had completely changed. You weren't going with your kind of people."

"If you mean Judy Carver—" Johnny began doggedly.

"I don't," Sally lied. She was determined not to let him know how much it had hurt when those rumors linking him and that blond, beautiful, husky-voiced glamor girl had reached her. It wouldn't have hurt quite so much if Judy Carver had been a really nice person, but she wasn't a really nice person. She was tawdry.

"I can explain Judy Carver," Johnny said. "I can explain everything."

"It isn't important. She's only a part of the picture."

Sally hadn't meant to sound bitter. She wasn't jealous of Judy Carver's meteoric rise from a Brooklyn grocery store, or her beautiful friendship with Johnny. She did not consume without salt the witches' brew of the gossip columnists, yet she believed that the existence of smoke usually indicates the presence of fire. Judy Carver was, Sally argued in her realistic way, merely a straw in the ill wind that would soon blow down Johnny's castle of cards.

"What is important?" Johnny plaintively asked.

"The way you went quickie!" Sally cried. "The boy who plucks songs out of thin air for anybody at a moment's notice! Writing Love Isn't That Way in a rowdy night club with Judy Carver's lipstick on Buzz Barkley's dress-shirt bosom!"

"It's a good song," Johnny said dully. "Next you wrote Bright China Skies, likewise on the spur of the moment, for Dorothy Lee Wang on a pari-mutuel ticket at a race track."

"What's wrong with Bright China

Skies?" Johnny asked. "The proceeds are buying rice for China, aren't they? It's a hit, isn't it?"

"Then," Sally proceeded, "in Jimmy Quigley's column about a month ago—Here. I saved it." She found the clipping in her desk. She read: "Johnny Hale has come up with another tuneful flash song. It happened in a Beverly Hills poker game. The stakes were astronomical. Johnny needed \$2,500 to call a bet, but he didn't have \$2,500. Producer Amos Jacoby offered him \$2,500 for an on-the-spot song for his new picture Dancing in the Dawn, and Johnny went into one of his famous fifteen-second trances and came up with I've Got the Symptoms, But Is It Love?"

"It's a neat little number," Johnny defended himself.

"It's a quickie," Sally said. "And—"

"If a song is good," Johnny broke in, "what difference does it make whether it was ground out in six months or whipped out in six seconds."

Looking at Johnny, so tall and brown

memory of me will be quickly removed."

The door closed solidly behind him.

Sally, contending with an impulse to burst into tears, realized she had ruined her last chance to patch things up with Johnny. She wasn't really sorry, she told herself as she walked into a chair that she thought was her bedroom doorway.

IT WASN'T that she had stopped loving him. She would always love him, but she knew what happens to romance when respect flies out the window.

And it wasn't that she wasn't grateful for his generosity in offering to do the songs for her picture. But the picture must be a success and she dared not jeopardize it with those flashy, spur-of-the-moment songs of his.

And it wasn't jealousy. It was simply that his choice of a girl like Judy Carver proved what kind of man he really was.

In a night club a few evenings later she heard Dinah Waverly sing the song she had spurned. A week later you couldn't turn your radio dial through its range

## MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

"He's a reticent little fellow when you get him alone"

and nice-looking, Sally felt herself weakening. Often in the recent past, when he had tried so ingeniously and so relentlessly to see her, she had almost weakened. She would not weaken!

"The six-second song," she answered, "can't help being flashy and cheap."

"There is a word," said Johnny, "called 'faith.' You might look it up in the dictionary."

"There is also," retorted Sally, "a word called 'character.' You'll find it plainly printed on the faces of people who have courage and integrity."

"Oh, nuts," said Johnny, knowing full well that when a man says, "Oh, nuts," in an argument with a woman, reason leaves the room.

"I wish I could make you understand—" Sally began in a whimper.

"I do understand," Johnny said savagely. "Thank you, glamor puss, for both barrels." He strode to the front door. He turned. His white teeth flashed in his most attractive smile. "If you will open all the doors and windows, all

without hearing Tomorrow's Laughter a dozen times. It made the hit parade in a month.

"All right, I was wrong," Sally admitted to her most private self. "It's clever and it's awfully catchy." It must have been. Everybody on the street was whistling it. "Johnny was right. I can sing them but I can't pick them. But in the long run, I'll be right."

A few days later at a Santa Monica Beach club she saw him for the first time since their quarrel. She and her producer were having a luncheon conference on the tiled terrace close to the ocean, and she suddenly saw Johnny's handsome curly head and his shoulders, burned by the sun a rich butternut, among the many bathers. She singled him out with the ease of a mother identifying the cry of her child among dozens.

He was frolicking in the water with a girl in a green swim suit. Her slimly sumptuous figure and her incredible daffodil-yellow hair made her easy to recognize.

They were playing with a large blue rubber duck with a red bill. They were laughing uproariously. Watching them play, Sally felt a sharp stab of unhappiness.

Suddenly, Johnny seized the rubber duck and carried it to shore. He borrowed a pencil from a man. When he dropped to the sand, he was less than a dozen feet from Sally.

Judy Carver followed him out of the surf and dropped down beside him. "Well," she said breathlessly, "have you got it?"

"Why," Johnny answered, "does a baby duck walk softly?"

"I don't know," the husky voice of Judy Carver said. "Why?"

"Because it can't walk, hardly." Johnny looked up at the cloudless California sky and began to hum a tune. Some men with cameras were strolling in that direction. "I think," Johnny said, "this may be that gay little swimming-pool number, Judy."

Sally realized that she was witnessing the painless birth of another of Johnny's spur-of-the-moment songs.

As he hummed, he began to write rapidly on the stomach of the rubber duck.

When Sally saw the photographs of Johnny, Judy and the inspirational duck—they appeared next day in all the morning and afternoon papers—she told herself that the entire episode was degrading. She experienced not only a feeling of revulsion but a feeling of desperation. She resolutely denied that it was jealousy.

When Sally heard the song, she did not change her opinion. It was gay and it was facile. It was catchy, as all of Johnny Hale's songs were; but it was, as was the duck episode itself, cheap and tawdry—a shining example of the expediency that would soon ruin Johnny Hale.

IN THE next few weeks Sally was too busy with troubles of her own to give much thought to the tragedy that loomed ahead for Johnny Hale. The studio was having casting trouble, story trouble, director trouble and music trouble with her picture. There were even times when the songs they were giving Sally to sing did not seem right to her; but she was not sure. When the thought occurred to her, she stoutly denied that she wished Johnny Hale were around to pass judgment on these songs, and she frequently assured herself that she did not miss him and was lucky to have got rid of him.

Sally let herself into her apartment one evening, so tired, so battered in spirit, that she could think of nothing but a long warm bubble bath and bed. She was so tired that the very thought of a cocktail was distasteful and the thought of food, abhorrent.

With the door half-opened, she stopped and listened. Someone in her living room was playing a familiar gay little melody on her piano. It was Why Do Baby Ducks Walk Softly? She closed the door and placed her back against it.

The unseen pianist began playing Tomorrow's Laughter. He played one chorus of that, then drifted into Bright China Skies and from that to I've Got the Symptoms.

Sally walked into her living room. Johnny Hale, looking very cool and self-possessed and handsome, was seated at her piano.

He saw her and stopped playing. He lifted one hand high over his head and held its palm toward her.

"How!" he said in a deep American Indian voice.

"How," Sally responded in a small, tremulous shriek, "did you get in here?"

"What a silly question," Johnny answered amiably. "I could have bribed

*Who says you  
can't get a  
good Martini?*

ONE luxury you *don't* have to give up is a perfect Dry Martini. Your local liquor store has them in this bottle, always ready and always right. You just add ice and serve.

What goes into this bottle is no secret, and what comes out is no guesswork: Milshire, the genuine pot-still gin, and the world's finest dry vermouth—mixed and measured with exacting care. *Neither love nor money can buy better ingredients nor make a better cocktail!* Order a bottle, or a case, today.

your maid. I could have climbed the fire escape. I could have picked a lock. The thing is, I'm here."

"The next thing is, you're going!" Sally panted. She was trying to compose herself. She was on the verge of tears, anyway. She had done only a sketchy job of removing her make-up and she looked a wreck. Not that the impression she made on Johnny mattered. It was simply that a woman always likes to look her best when she confronts the man she has jilted.

She was trembling with anger. She wanted desperately to be alone.

"Some people are dropping in in a few minutes," she said coolly. "I have to bathe and dress and—and—"

The affectionate gleam in Johnny's blue eyes made her falter.

"I am awfully busy," she said firmly. "This was a cute stunt, Johnny, but I must ask you to go."

He was watching her attempts at calming herself with sympathetic interest.

"I know what you mean," said Johnny. "'Sighted song writer; sank same.' But I've just heard the music for your picture. To be perfectly frank and dispassionate, it stinks."

SALLY seated herself on the edge of the nearest chair. "So you broke into my apartment like a common burglar—"

"—To come to your rescue."

She clapped her hands. "And write a little number for me on the back of a rubber duck!" she caroled. "What a pity! I gave my entire fleet of rubber ducks to the rubber drive."

"The last song I swam to your rescue with—" he began.

"Ah, yes! You told me I couldn't pick them. Remember? And now it's Number Three on the Hit Parade. Proving that if I don't follow your advice, I'm a Hollywood has-been before I even begin."

Johnny pursed his lips judicially, but he raised only one eyebrow. "Perhaps we shouldn't put it quite so strongly."

Sally jumped up. "Get out of here!" she cried. "I don't want your quickies!"

"That," said Johnny calmly, "comes under the category of sticks and stones. The Navy is allowing me about two weeks to clean up all my unfinished business. Let's finish this now. Let's be honest, Sal. Let's face the facts."

Sally slowly sank down on the edge of the chair. "What facts?"

"That you're going to be the face on the film vault shelf if you don't get one good romantic song to hang that picture on."

"Goody!" Sally cried. "You're going to take it out of a silk hat before my unblinking eyes!"

He gravely shook his head. "I don't seem to be in the mood, Sally. But I'll try."

He swung around to the keyboard. He played some experimental phrases. The notes were like rippling liquid. He tried some chords. He played a few of his favorite whimsical arpeggios.

"This may be it," he said dreamily. "I think—I think the title of it will be *Deep In This Lonely Heart*."

With her eyes closed, Sally listened. His fingers were finding a melody that was wistful and might readily become haunting. He began to sing:

*Deep in this lonely heart a song lies  
dreaming,  
Waiting for the magic of a word—  
A word as gentle as the murmur of awaken-  
ing spring.  
It dreams and awaits the little whis-  
per. I have heard  
Upon the night mocking laughter. I can-  
not sing*

*This love song, my song of life, until  
your lips,  
So cruelly silent, waken it from its  
dreaming.*

*Beloved, return soon to my side and  
whisper the word  
That will give to both of us our mean-  
ing.*

Sally jumped up. "No!" she wailed. Johnny swung about. He looked shocked. "What's the matter?"

"The same thing!" she said hysterically. "It's just too quick! It's just another song on a rubber duck!"

He got up. "Sally," he said in a shaken voice, "do you really feel that?"

"I don't trust it! You say I can't pick them. Maybe I can't. All I know is that one of these times one of these quickies of yours will be a dud. This may be the one."

"No," said Johnny, "this isn't it. This song has a heart. This is your love song."

Sally was shaking her head. "No! No! It isn't it!" She gulped. "I asked you to stop bothering me. I meant it."

Johnny stared at her as if he were amazed, then he walked rapidly to the doorway. He turned and gave her a long look from blue eyes that had turned black and bleak.

"Good luck, glamor puss," he said.

She heard the door close. She sat down and put her face in her hands. Her face was hot. She was shaking.

She jumped up. She ran to the door and let herself out. She rang for the elevator, then ran to the stairs.

Johnny Hale was climbing into his roadster when she ran into the street.

"Johnny! Wait!" she cried. She ran to the car, opened the door and climbed in beside him.

She panted, "I'm sorry I was so rude. I can't let you go thinking I'm ungrateful and hateful. The whole thing is, I can't help feeling the way I do any more than you can help the way you've changed."

"Is that the whole thing?" Johnny asked quietly.

"But I am grateful!" she said breathlessly. "You were so sweet to go to all this trouble. I realize you're only trying to help me. I—I think it's the nicest song you've ever made up on the spur of the moment."

"Can I drop you off some place?" Johnny asked calmly.

SHE felt weak and sick and thoroughly miserable. She suddenly felt terribly alone and lost.

"Johnny—" she whimpered, and stopped.

Along the quiet, dimly lighted street someone still invisible was walking toward them, whistling. It was a sweet, wistful, eerie melody.

"I've really got to be going," Johnny said. He started the engine.

"Just a moment," Sally said. She was suddenly alert and mystified and very calm. "Turn off that engine."

When he did not obey her, she turned it off herself.

She heard again the wistful melody. It was closer.

"Johnny!" she whispered. "Do you hear that? It's the song you just composed! It is!"

"I've got to be getting along," Johnny said.

Sally could now see the whistler as he came down the sidewalk under the pepper trees. She softly picked up the words.

"Beloved, return soon to my side and whisper— Hey!" she called.

He was a tall, thin mulatto boy in an apartment-house uniform.

He hesitated, peered, came over. He

looked in and said, "Oof! Evenin', Mr. Hale."

"Hullo, Harry," Johnny said dully. "That," said Sally, "was a lovely song you were whistling, Harry. What is it?" Harry looked frightened. "I—I don't rightly know, ma'am."

"But where did you ever hear it?" "Mebby you better ask Mr. Hale." "No. I'm asking you," Sally said. "And Johnny—I'll do the talking." With one hand, Johnny made a limp gesture equivalent of a shrug.

"Do you work for Mr. Hale?" Sally asked.

"No, ma'am. I just run the elevator in this building."

"And you heard him playing that song?"

"Yes, ma'am."

"How long?"

"You mean, how long I been hearing him play it?"

"Yes."

HARRY'S face became thoughtful. "Two months. Yes, ma'am. Any two months." The whites of Harry's eyes became prominent. "But it wasn't always like the way I was whistling it, ma'am!"

"No?" said Sally.

"Oh, no, ma'am. It's just like the way he does all his songs. It starts off one way, then he changes it and changes it's you hardly know it, and finally he gets it right."

"That," said Sally, "is terribly interesting, Harry. Give me five dollars," she said to Johnny. He gave her a five-dollar bill. She gave it to Harry. He clutched it and gazed at her dumbly.

"Thank you so much, Harry," Sally said. "It's awfully interesting, the way song writers work, isn't it?"

"Yes, ma'am," Harry agreed in a dazed voice. "It sure is." He resumed his walk under the pepper trees.

"Step up, folks," Sally said softly, and watch the pretty gentleman go into a trance for fifteen seconds and come up with a lovely song."

"This is where I came in," Johnny muttered.

"How beautifully you did it!" Sally

marvelled. "Especially the rubber duck—with all those publicity department photographers so handy!" She was half laughing, half crying. "Darling, you did it beautifully!"

"The pretty gentleman will now roll his hoop," Johnny muttered.

"I can guess all of it! You were deep in that slump and desperate when you came to Hollywood. Isn't it true that you fell into the hands of a smart press agent and did everything he told you to do?"

"Yeah," said Johnny.

"Wasn't his first suggestion that you go home and compose a piece and then create it spontaneously on Buzz Barkley's dress-shirt bosom—using Judy Carver's lipstick?"

"Yes," said Johnny.

"Is your press agent by any chance Judy Carver's press agent, too?"

Johnny hesitated. "Yes," he said.

Sally held her breath a moment. "He arranged that Hollywood romance because she's been slipping! There wasn't ever anything between you—was there?"

"Certainly not," said Johnny. "I kept reminding her that she was dangerous, so it wasn't necessary for her to demonstrate it."

"Why," Sally wailed, "didn't it occur to you to tell me your dreadful secret that day at Malibu when—"

"Occur to me!" Johnny said indignantly. "You wouldn't listen to me! You were too busy giving my character a total blackout!"

"Johnny!" Sally said. "My poor darling." She put her arms about his neck, pulled down his head and kissed him. "Johnny," she said tremulously, "I'll never doubt you again. Oh, darling, how I've missed you! Will you forgive me?"

"What is there to forgive?" Johnny asked. "I wouldn't have any respect for a girl who had any respect for what I've been these past few months."

Sally sighed with contentment. "I should have known," she said. "A really nice man never changes."

"Give me fifteen seconds," said Johnny, "and I'll have the music, two verses and a chorus to fit that."

THE END

# Can your scalp pass the FINGERNAIL TEST?

**1. SCRATCH YOUR HEAD** and see for yourself. If dryness or loose ugly dandruff is spoiling the looks of your hair, you need the new Wildroot Cream-Oil Formula today. Safe 3-action grooms, relieves dryness, removes loose dandruff!

**2. YOUR HAIR CAN LOOK LIKE THIS** with Wildroot Cream-Oil Formula. Gives you well groomed hair without that slicked down look. Contains no alcohol. Made with soothing Lanolin\*. Get a bottle today. Two sizes, 60¢ and \$1.00.

## Try it today! NEW WILDROOT CREAM-OIL NON-ALCOHOLIC FORMULA

GROOMS THE HAIR . . . RELIEVES DRYNESS . . . REMOVES LOOSE DANDRUFF

Don't worry if you find loose ugly dandruff under your nails when you try the Fingernail Test! New Wildroot Cream-Oil made with Lanolin\* removes loose dandruff and relieves dryness. Keeps your hair well groomed all day without that greasy look!

Get a bottle of Wildroot Cream-Oil today! Discover why 76 out of every 100 users, on a recent nationwide test, prefer it to hair preparations they had been using! Mild, pleasant odor. Equally good for women and children! Grooms and relieves dryness.

\*REFINED LANOLIN is an important soothing ingredient that closely resembles the natural oil of the skin. Wildroot Cream-Oil is scientifically homogenized for uniformity! Get a bottle today. Two sizes.

### EASY AND ECONOMICAL TO USE!

Just pour a few drops into the palm of your hand. Rub hands together and apply to your hair.

Massage briskly. Dampen hair with water if desired. Then comb or brush in usual way.

# Are Children Worse in Wartime?

By Ella Winter

Charles Ross Heath, 16, comes before Justice Siegel of Marquette, Mich., for kidnaping two-months-old Gloria Nault, whose body was found in a truck. His mother is standing behind him

Juvenile delinquency is on a rampage. It is convenient to blame the war but the cause goes much deeper than that. Parents and responsible government agencies please read—and blush

**D**ID you drink the beer?" "Naw!"

The little Spanish boy did all the answering; he looked friendly, roguish, warm-eyed—and sharp-witted. You could see he was a city kid.

The two little boys of twelve stood before the judge in Children's Court; behind them were an angry truck driver, a policeman and two weeping mothers. They had been caught on a beer truck, each with a stolen bottle of ale.

"What did you take it for, Sonny?"

"You can turn 'em in for a nickel."

"What would you want a nickel for?" The judge speaks to them in a quiet, confidential voice.

"T" buy candy."

The driver was sore. They were the eighteenth and nineteenth bottles he'd lost that day and the company held him responsible for every bottle. When a radio patrolman had come by, he had turned the kids in.

"Ever stolen before?"

The brown-eyed boy winced. His mother was sobbing loudly. It wasn't fair to call that stealing! But the judge is probing, to find out what kind of kids they are.

"Naw!" The judge believes the little, friendly, Spanish boy. He sends the two of them upstairs to wait. They will wait several hours, scared out of their wits. Then they will hear the judge's decision.

For stealing, hundreds of thousands of boys, the country over, are haled before children's courts, psychiatric clinics, juvenile aid bureaus, adult courts. They swipe stuff from hucksters' barrows, trucks, candy stores, warehouses, drugstores, from parked automobiles, shops, the five-and-ten: candy, a sweater, a shirt, chewing gum, penknives. In Hartford, Conn., a war-production center, they have been specializing in stealing nickels from parking meters.

You are sitting behind the kindly voiced judge and

asking yourself guiltily: How many boys do you know who've taken things? Nice boys, of good family; perhaps even your own boys—candy, apples, chewing gum, change from your pocketbook. The shopkeeper will call you up (or the teacher will), and ask you to "take care of" it at home. And you do, at home. Never a policeman; never a court.

Five boys were caught stealing autos. I found them at the out-patient department of the mental-hygiene clinic. They had already been arrested and arraigned. They had admitted stealing cars for rides and saw nothing wrong in it. Hadn't the cars been standing at the curb with their keys in them? The fact that they were using another person's property, that they were using gas that wasn't theirs meant nothing to them. They wanted to drive, so they got into the first car they saw, and drove. What else was there for them to do at night anyway?

Again you think of your own boy, who loves driving. What might he not have done had you not given him his opportunity legitimately? But these boys were not as fortunate; they are arrested, fingerprinted, sent to jail. They start on their long downhill career.

Among girls the largest number of delinquencies are sex offenses. There are girls who become pregnant at twelve—girls who accompany a man who offers them candy and friendship. There are little girls who play out on the streets at night, and go along with a truck driver for a nickel or a dime. That is the sum.

Now, since the war, many girls go out with soldiers and sailors, partly for the fun and the proud display of their "feller" in uniform, partly because the servicemen are lonely in a big, strange town and the kids feel they are doing something patriotic. They want to give something, so they give themselves. They're called "Victory Girls." Many are between twelve and fifteen; most have no idea of the consequences. Venereal diseases have risen alarmingly. Some girls, of course, have no objection to the money in it. One child of sixteen came to Juvenile Court with thirty offenses in one night to her credit, at \$1.00 each. I asked if they ever went after the man.

"We can't do much about them," the judge said. "The men all give the girls the same name—Tex—or Boston."

## War Increases Juvenile Delinquency

Juvenile delinquency had been on the downgrade before the war. In New York City there had been 56% less court intake of allegedly delinquent white children between 7 and 15 per 1,000 population; 10% less Negro children. With the outbreak of war, it rose immediately. In the first six months of 1942 there was an increase of 14%, in New York City, in the number brought to court; the most spectacular rise was in youngsters between 10 and 13. In girls of 13-15, the rise was 33½%. In Detroit, girl delinquency is up 43%; in the Niagara Falls area, a new war-production center, it has jumped 58%. Hartford, Conn., another large and quickly expanded defense center, has doubled its number of truants and more than doubled its number of missing young people in 6 months. In Los Angeles, arrests of youngsters rose 35% in the first three months after Pearl Harbor.

Actual commitments of delinquent children to institutions in New York City—and they are a small fraction of the cases brought into court—increased 20% in the first six months of 1942 compared to the same period in 1941; what is more striking, the rise in April, May and June, 1942, compared to January, February and March, of the same year, was 18.6%. The problem is thus intensifying rapidly. J. Edgar Hoover, head of the F.B.I., who must judge from the most flagrant cases only, says all juvenile delinquency has increased at least 20% the country over, that it is "mounting rapidly," and "unless something is done," we "can expect another era of lawlessness such as swept the country after the last war."

Does this mean our children have all suddenly grown worse?

In Los Angeles, a Mexican boy was shot and killed. Police investigated and came upon a huge, organized gang of boys and girls involved in every kind of crime—holdups, robberies, shootings, murder, attempted kidnaping. None could join the gang who hadn't committed robbery or seduced a girl. All smoked marijuana. By August last, 400 boys were in custody, twenty-eight were indicted for murder, and their "girl friends" were held as accomplices.

In Detroit, a juvenile mob of over 100 boys and girls invaded night clubs, theater lobbies, movies, bars;

THE FLEISCHMANN DISTILLING CORPORATION, NEW YORK, N. Y. • SOLE DISTRIBUTORS

smashed windows and furniture, tore down displays, threw stones and terrorized patrons and passers-by.

In New York City schools, the subject has become a grotesque nightmare. Two Brooklyn boys of 16 and 19 shot and killed their mathematics teacher. The papers were full of their brazenness, their zoot suits, their cold-blooded unconcern for any human values. The boys had objected to being reprimanded by the teacher. They are in Sing Sing for fifty years. A "reign of terror" has actually grown up in the city schools. Teachers are beaten by their students; students are beaten by their teachers. The teachers, through their guild, have appealed to the city police to protect them from bodily harm.

Some people blame Negro children; others blame foreign races. Most recent investigators say the picture includes all races, all religions, colors and creeds, and is worse only in the most overcrowded districts and in the underprivileged areas.

### Broken Homes Break Lives

Overcrowding of understaffed schools is blamed, where attendance in classes has risen to sixty pupils. Trailer towns in the new production centers have no room or facilities for the children to entertain their friends. The kids meet in taverns, at rinks, in roadhouses and stay out till 3 and 4 A. M. Mothers tired from a day in the factory don't even want them around—in the one crowded room.

It may seem a new problem.

"Tension—due to the war," is the main diagnosis. Police say: "Wartime tends to create a lawless spirit." Social workers say: "Fear of bombings, black-outs and air-raid drills are too strong an emotional stimulus for children." Boys have grown more restless; it is hard to put in those two years between 16 and 18 when they will go in the Army, hard under such conditions to keep the mind on steady, settled work. Youngsters are earning relatively high wages due to defense work and shortage of adults in civilian occupations. They grow cocky. Fathers are in the Army, mothers in the factories; families are split up; the home is no longer a home. Discipline has weakened, supervision of children has dwindled. There are too few social workers, too few supervisors, too few probation officers, teachers or welfare workers.

But is it a new problem?

True, there are new conflicts and new anxieties. True, violence and aggressiveness, normally frowned on and discouraged in the young, have become heroic virtues. Flash Gordon and Superman are childhood idols. The Russian gangster who killed 309 Germans is a heroine. Standards are topsy-turvy.

Didn't a lot of it happen before? Hasn't what is taking place now to the accompaniment of such a chorus of amazement and outrage been occurring for a long time? Before the zoot-suit slayers, wasn't there the bobbed-haired bandit? Before the Mexican gang, wasn't there Al Capone and his racketeer? Before the SS, didn't the Black Legion terrorize Detroit? There are some new causes; pressures are heightened. But let us face it: the seed fell on fertile ground.

Juvenile delinquency, as a social and legal phenomenon, hasn't had a long history. American law and treatment based themselves on English experience. England, children were subject to Poor Law tradition; and English Poor Law practice is something difficult to read about even in these days of mass slaughter. The kids were treated as "mature adults," segregated, humiliated, degraded, put to work at hard labor.

A hundred years later, in a new, rich country, young delinquents are still herded with adult criminals in state prisons; in reformatories, boys are thrown together, the normal and healthy with the sick, the feeble-minded, the defective, the psychopathic. It has become a truism that if a child is sent to a reformatory he is inevitably started on a life of crime.

At Whittier, one of California's two industrial schools, two boys committed suicide by hanging themselves with the leather belts. In the ensuing outcry it was discovered that the most brutal regime held sway, with guards beating and torturing the boys. There was no segregation between the abnormal and the normal, and California is not the only guilty state, either.

That's the picture—in outline. What to do? Not tomorrow, or when it gets worse, or after the war is over. Now. In all the honest investigations and all the same reports, the same causes for child delinquency are always found: poverty, neglect, lack of community facilities, lack of provision for children's energy and activity, no thought for outlets for the

"I'm mad at you, Mr. Schmidt—you still have plenty of everything I hoarded last summer!"

COLLIER'S

REAMER KELLER

"What I can't understand is: how come we talk so little about what we're doing, and those guys talk so much about what they did"

COLLIER'S

COLIN ALLEN

agination, for their need of attention, understanding, friendship.

The individual and the community have both failed the child. Astonishing facts and figures greet the inquirer. There is full agreement on the housing shortage, on the difficulty of life in the new trailer or prefabricated towns. Yet in this situation the city administration of New York cut park appropriations nearly \$2,000,000, closed schools, boys' clubs, health and recreation centers, swimming pools and summer playgrounds; sliced \$900,000 from the education appropriation (and the state sliced another \$2,000,000). Over a thousand jobs in the Welfare Department have been eliminated or left unfilled. The best agency dealing with delinquents, the Juvenile Aid Bureau, has been closed.

England learned a costly lesson from this war. In its first year, 1939, England sharply cut welfare services and social agencies, as well as schools. Almost immediately juvenile delinquency rose by a third, in the first four months of war; by 62% in the second as compared with 1938. Children and adults became infected with diseases to an alarming extent.

#### Action on the Home Front

But seeing all this, England corrected her mistakes. Closed schools were reopened, health and recreational services were not only put back but extended, skilled workers were called back to welfare work. Evacuated children were housed in children's shelters or in foster homes, their loneliness, anxiety and tension dealt with—a little. Hundreds of new nursery schools were opened. It was impressed on everyone that care for children in wartime was front-line service on the home front.

Or take another country. In Russia, when war and invasion broke up thousands of homes, all kinds of institutions, trade unions, state farms and factories set up new kindergartens and nurseries, homes and shelters and orphanages. The slogan raised was: "No orphans in the U.S.S.R." Foster parents offered their homes, their care and their love. And all this in a relatively poor country whose land is invaded and where fifty million people have been moved from their homes. The community in Russia does more, wherever feasible. In new factory towns, or old villages, in besieged cities, in guerrilla-administered districts, on the farms, there are theaters for children, circuses, puppet shows, museums, concerts, exhibitions, clubs, playgrounds, "parks of culture and rest." The children themselves, the country over, have organized in "gangs," but the gangs have as their objective the helping of Red Army fami-

lies, salvaging scrap, gathering the harvest, dragging wood to where it is needed, in factory or home. They use up all the surplus energy of the children.

No child lives in a vacuum. Children will take out in concrete behavior against other human beings hurt that has been done to them. When they are "bad," the temptation for adults is to bear down on them, exercise authority, punish, repress. Almost half of America's twelve-year-olds still get whipped or spanked at home; three quarters get slapped; a third have said they are afraid of their parents. This is how they put it: "When I get whipped or slapped I get mad and want to do something else bad. It makes me do worse things than I did before." Mothers drag their own children to juvenile court and ask the judge to "put the fear of God into them." Fathers insist on their rights, in complete disregard of the child's welfare; parents can be cold, selfish, jealous, unseeing or simply uninterested. A child is quick to know when it is not wanted.

Dr. Miriam Van Waters, an experienced and far-seeing Children's Court judge from Los Angeles, has listed nineteen ways of being a bad parent. Her opinion is that juvenile delinquency could more properly be called parental delinquency. Modern psychiatry has added to our knowledge of the endless ways in which unhappy or harassed parents take their tensions and anxieties out on their children. The child may break the china, torture the cat, stay out all night, and the reason is to be sought in what is happening to the parents' lives.

But in addition to the conditions or treatment that leads the child in juvenile court to say, "I would rather die than go home," there is a vast new social problem we have hardly faced. The family is changing, the role of the modern state is being transformed. Philosophies, relationships, spiritual values, our fundamental ethics are shifting so rapidly that it is difficult for the most enlightened parents to know where they stand or where their children stand. The family is weakening, as former President Herbert Hoover's Report on Social Trends pointed out. The community has not caught up. Juvenile delinquency is one result of these changes.

The answer must not be more repression. No child is a born criminal. No child is an "icy-hearted killer." Every child needs someone to go to, in or out of trouble. We have got to be honest with ourselves before we can help a child.

Juvenile delinquency does not have to be the nation's growing Number One problem.

THE END

-nothing like it!

Here and abroad, in tropical and frigid climates, our armed forces have found that Mennen Skin Balm is good for treating a variety of skin troubles. A unique preparation that is cooling, astringent, non-greasy, it quickly soothes irritated skin. Vanishes almost instantly. Send a jar to some boy in camp—keep a jar or two at home. Here are a few of its many uses:

- after shaving
- chapped hands and face
- for sunburn and windburn
- cold sores and cracked lips
- relieves tired, burning feet
- takes sting out of insect bites

**Feminine Note** — Mennen Skin Balm keeps arms and legs soft and smooth.

**MENNEN  
SKIN BALM**

## *Arctic cold* on the Alcan highway doesn't faze these big Studebaker trucks

**H**UNDREDS upon hundreds of huge, multiple-drive Studebaker trucks are rumbling over the wild rugged route of the great new 1610-mile Alaska-Canada highway. More of these big Studebakers are in service on this amazing military road than any other make of truck. And despite temperatures that often drop far below zero, Studebaker stamina is getting the cargoes of vital supplies through to our important North Pacific theater of war.

Not only on this Alcan highway that forms a land-bridge between our distant Alaska outposts and the continental United States, but also in all kinds of climates in all parts of the world, Studebaker military trucks are busy helping to tip the victory balance in favor

of the armed forces of the United Nations.

Tens of thousands of these trucks are in service on the supply lines and at the fighting fronts. And tens of thousands more are on the way.

Studebaker engineering and craftsmen provide Studebaker trucks in wartime with the same stand-out superiorities for which they were so widely recognized in peacetime. Through generation after generation, for more than 100 years, the men of Studebaker have made it their habit to "give more than they promise."

That is still their watchword in the manufacture of big multiple-drive military trucks. Wright Cyclone engines for the Flying Fortress and the other vital war materiel they are producing now.

**Studebaker is proud of its assignments in the arming of our Nation and its Allies—** Studebaker builds huge quantities of Wright Cyclone engines for the Boeing Flying Fortress as well as much other matériel including millions of dollars worth of big multiple-drive military trucks every week.

# Journey to the Sea

By Harry Sylvester

ILLUSTRATED BY ELMORE BROWN

Some things, when refused, can never be had again. A woman's heart is not necessarily one of these things

HE SAID goodbye to Twining and Varsadi—no longer even annoyed with the former—when he left the Sick Officers' Quarters of the Base Hospital that last morning and went to the office where he signed papers he never read, and to the paymaster's, where they gave him money he never counted—a large, folding wad of it—and he was free. The orders said he was to travel out of uniform, but as he was leaving the reservation, the Marine at the gate recognized him in the civilian clothes and saluted; so that, nodding in return, with a diffidence that came on him as suddenly as passion might, Camoens felt better because of the salute.

He took a cab to the station and picked up his reservation. After checking his bags he went to a bar for the first drink in months. Standing there, the rye whisky and water in his hand, he seemed to have lost his taste for it, but he could feel it working in him, so that he drank it all, feeling it let loose the things he had not been going to think of now that he was going to sea again.

Most of all he thought of The Patriots. He had christened them that himself, although other men had other names for them, and they existed in the secret world of his mind forever as they had once existed in fact, each one young and terrible, coming unwillingly to the hospital and fiercely to the door of the S.O.Q., where the others stared at him curiously or indifferently.

Camoens supposed that he had once been a Patriot himself, and part of him was proud that now he was something harder and less self-deceiving, something without a name, perhaps, but of value for the time they lived in. He thought of Twining, short, hard and barrel-chested, coming that first time to the door of the S.O.Q., fierce as only short men can be fierce. Twining had never been to sea. They had taken him out of training school with some kind of rash and sent him to the base hospital, where, for the first forty-eight hours, he had told the others what the United Nations were fighting for.

No one had said or done anything, except to look at Twining tolerantly. They knew that the casual talk that came out nights after the lights were out in the ward would silence Twining as it had the others before him. Camoens remembered now the nurse coming in with the final medicines for the day, and Garber on his cot making his usual pass, trying to put his arm around the nurse, and the nurse finally saying what the others had begun to know, with pity and amusement, was true about Garber. She said, "You're not kidding anyone, Garber. You've been too sick to be really tough. It's become a convention with you."

And all of them laughing, even Gar-

ber, but not Twining. Twining saying, just before the lights went out, "You guys are certainly worried about the war," and no one making a direct reply, but in the darkness someone asking the Scotsman from the Royal Navy what it was like when the planes came down shooting at your ship. And the little man, getting over pneumonia brought on by hours in the water, saying in a heavy burr, "It's no so bad after the fir-rst time. The fir-rst time, you want to jump overboard, whut wi' the noise of the plane and it cooming doon. But then you notice the machine guns are missing you by plenty—oh, say ten or twelve feet. It's no so bad."

Camoens supposed now that if Twining hadn't been so young he would have known enough to shut up, but he had said, "Darned if we're afraid, Scotty."

And the silence, with someone finally saying, someone never identified, "When was your last sea duty, Twining?"

And again the silence, which they mercifully didn't let be too long, before someone said to Varsadi, "What was it like there, Joe, off the Russian coast in the small boats?"

"Oh," Varsadi said, "I guess it was the

cold mostly. We figured to make it to the coast if it didn't get too cold. We did, and all most of us got out of it was the bad feet. I guess it was really worse when we were in Archangel. We were out of uniform and standing in line for food every day for weeks, and one day we heard of the British and American sailors fighting, and we went over to see what we could do, but we couldn't do much because we were out of uniform. And some Russian said, 'We fight the Germans—and the English and Americans fight each other.'"

So Twining had finally kept quiet and they knew he had learned, too; the thing they all learned, after the enthusiasm of ignorance and inexperience had left them: that it was a hard job, to be done coldly and with what he supposed the intellectuals would call objectivity.

IT SEEMED to Camoens now that his own experience had not been bad: Circling a small coastwise convoy and dropping depth charges rhythmically and seeing the oil rise, but the exultation brief as the torpedo (that none of them saw and a few of them never felt) hit. What had been bad was getting through the surf off the North Carolina reefs; but the Coast Guard had come out into the surf and led them through.

He finished his drink and went outside. Walking through the dusk of the city, he was glad to be on the way again. He had no time to see his parents, and the mine sweeper he was going on was no safer than most mine sweepers. But neither bothered him. He was preoccupied

with a nostalgia for the girls he had known. Only a little later—two or three days—the nostalgia would be something else, he knew. Now, it was vague and even impersonal and he could be glad—with the same objectivity they all acquired, willy-nilly—that it was impersonal. No one to worry over, whether for her own concern or her infidelity.

He ate in a quiet restaurant near the station, smiling inwardly and ironically as he waited for the young women to look at him; and when they passed, unheeding, he glanced at a mirror and saw he was not in uniform. Once it hadn't mattered to them whether he had been in uniform or not, and he wondered if it were the hospital pallor but knew it was not that. He smiled again, thinking that the best of the things the war had brought to him was the capacity to quickly, almost automatically, disillusion himself.

On the train, the berths were made up and he saw none of the people he was to travel with. He sat on the edge of his berth, more tired than he had thought to be. The train was moving slowly when she came into the aisle between the berths, a tall girl who moved with grace. Her head was over Camoens as she passed and he knew she had not seen him. The scent she used seemed to linger with him longer than it should have. Something to go to sleep on, he thought, with the new and almost continual irony.

But he was more tired than he knew and was grateful for it. In the morning he was the last one up in the car and, when he was dressed, saw that the girl was talking to a second lieutenant. There

The customs inspector closed the bag and grinned, calling him Captain. Camoens could feel the girl staring at him

# VEGETABLES—MIDSUMMER FRESH! In March—and cheap!

**1. Right now**, with market vegetables skyhigh, you'll get *more for your money* with Birds Eye Vegetables—*farm-fresh* in March! They're *tops* for filling out shortage-riddled menus . . . rich in *vita-mins and minerals* we need today!

**2. Take peas:** they're *delicious, tender—natural color!* They're Quick-Frozen *with-in 4 hours!* Garden goodness is captured —and they're **WASTE-FREE, WORK-FREE** (like *all* Birds Eye Vegetables!). Shelled, washed, *ready to cook!* Box serves 4.

**3. Nothing good** is lost because of long trips to market! And they're *definitely money-savers* (particularly the peas) because you can *eat all you pay for*—no waste at all! Buy Birds Eye Vegetables in **ONE** dept.! Save Worry, Time, Tires!

**BIRDS EYE** Peas—rich in vitamins A, B, G and C—have been accepted by the Council on Foods of the American Medical Ass'n.

**BUDGET FEATURE!**  
THIS WEEK—**PEAS**  
MARCH 8-13

you are, George, he told himself, that's what you get for being out of uniform.

From where he sat he could see them talking, the man uncertain, the girl bright and assured, but hanging on the man's words. Camoens stared at her and she grew annoyed. When the two walked past him on the way to lunch, he saw that the girl was slightly taller than the lieutenant. A little later, at Indianapolis, Camoens was amused to see the lieutenant dash back into the car to pick up his cap and luggage and get off. You will talk to pretty girls, Camoens thought. You should develop the ascetic principle: The less you want or have, the less you can be hurt or disturbed. So should we all, he thought, all develop it.

The girl returned to the car and became severely engrossed in her knitting. The light leveled over the Illinois plains and farms, and George Camoens, more uncertain than he had been in years, made the first, desperate attempt of that day toward serenity. He asked the girl if she would like to read one of his books or the paper. No, she told him, she would not. She looked severely at his civilian suit. One of The Patriots, he thought, and turned away.

**I**N ST. LOUIS he wandered aimlessly around the station, waiting for the train south. The Navy grapevine at the hospital had it that his new ship was going to be in the middle of things. It probably wasn't true, he considered; the grapevine was frequently wrong. But this time he would be just as pleased if it were right. He wondered what the girl was like. Even discounting his stay in the hospital, she seemed pretty special. He supposed he had been too resigned, had let her get away too easily. He should have turned on the charm, like water in a tap. His own thoughts annoyed him and he told himself that a sinking and less than three days in an open boat should not have affected him so. He was seeing things, too, for as he walked toward the train, he saw her again. There was only one porter in sight and Camoens gave the man his bags before the porter could reach the girl. He went toward her.

"Those are kind of heavy, aren't they?" he said.

"Oh, I can manage, thank you." But she let him take the bags.

"You're on the Mexico train, too?" he said.

"Yes."

"It's a long ride," he said, aimlessly.

"I've never seen the country," she said.

"I thought it would be better to ride than fly this time."

"I wanted to come down leisurely, too," he said.

"For your health, I suppose?" It was only a moment later that he realized she had given the words a double meaning. He looked at her, erasing carefully even the weariness from his face, and said, gravely, "That's right."

There was only one Pullman for Mexico. The girl knitted while Camoens sat next to her and talked, her answers in studied monosyllables. It had become quickly dark outside and they could no longer see the land. It swept by them in a long, unending shadow and Camoens stared at it across the girl, seeing in it some sort of vague symbolism. Against its dark, swiftly moving shape, he saw the girl as if for the first time, the profile white and clear. He caught himself and thought of the charm, which someone had said he could turn on and off like water in a tap. He said, "The darkness is a very effective background for your face."

"In New England, on the shore lines, I wouldn't have it, because we pull down

all the shades on the seaward side of the trains when it grows dark."

"Oh, to be in New England, now that November's there," he parodied. The charm wasn't working very well, he considered. The girl continued to knit. A Patriot, he thought. The dull blond hair curled once where it touched her shoulders. She could get away with it, too, he decided. The train whistle blew in the night and he said, "That sound is supposed to be a lonely one, but no one seems to know why."

"I've never thought much about it," she said.

"You are difficult," he told her, half to himself, then added, in the same half-pensive tone, "Certain sounds or sight or odors remind us of unrelated things for no apparent reason." He went on half-weary, more sincere than he knew. "Your face against the land rushing by made me think of women that lived a long time ago, whose beauty became legends."

Her gasp was almost imperceptible but her face had only the appearance of humor as she said, "Do you tell that to all your stray female acquaintances?"

"I don't know," he said, now not looking at her. "I really don't. I don't think so. It's been a long time—" The self-pity he hated rose in him and he almost told her who and what he was. Such as it is, he thought, and shook the temptation away. He said, "Dinner. I mean would you like to? Camoens is my name George Camoens."

She looked at him. "Another gag too?"

"No," he said. "Sorry, though. Had a Spanish grandfather. No relation to any one famous of the name. Maybe just a drink?"

"I'm not drinking," she said.

"You Patriots," he almost said, but didn't.

"But I'll have dinner with you if I can pay my own check."

"As you wish," he said. "Any concession for the pleasure of your company."

Rising, he swayed, walking with the motion of the train, and the illusion of drunkenness was strong in him. He supposed the crusher would be when they opened the bags at the customs. How modest he would seem or something.

**H**ER name was Elaine Hammel, she told him, when they were in the diner. She said that the weather had been very bad in Connecticut. He was not surprised, he told her gravely, wondering why good-looking girls could not also be intelligent ones.

"I suppose you're going to Mexico or business?" she said.

"I suppose it could be called that," he said. "And you are on vacation, of course?"

"Not entirely," she said. "I have a brother in the Navy, and I'm going to see him at one of the West Coast ports before he sails."

Camoens looked over her head. "Mazatlán?" he said.

"How did you know?"

"Guaymas is pretty far north and not handy. It's either Mazatlán or Acapulco. You'll fly from Monterrey west."

"No," she said. "I couldn't get plane reservations. I have to go down to Querétaro and then up the West Coast."

"That's right," he said. "Those little planes west from Monterrey can only carry a few passengers."

She said, "You must be married or you'd be in the service."

"No," he said. It was not often, he considered, that a Patriot was delivered into his hands. If, by chance, he and her brother should be on the same danger-

ous boat and if she could be made to like him. He said, "I'm amazed you aren't married yourself. What with your brother in the Navy. What's his rank?" "He's an ensign, just out of college last spring."

He wanted to ask her if the brother was sailing on the Sheldrake, too, but made himself wait. The timing must be perfect. "But that doesn't explain your not being married," he said, gently.

"Oh, that will come in time," she said, not displeased.

"Meantime," he said, "there are any number of second lieutenants!"

The words and their nuances were exact, he told himself with something like pride. They gave her the chance to refuse to be needled and also complimented her, a kind of double flattery. "And why not?" she said, smiling, but not looking at him.

"Exactly," he said. "Why not. 'Who has beheld fair Venus in her pride...'"

"Oh, do finish it," she said.

"No—I don't know you well enough and you mightn't like it. Next time you get hold of a volume of George Peele, you can look it up." He moved his chair back slightly from the table. "Shall we join the ladies?" he said.

"Ah," she said, "a card."

"I hope not." He knew now what she liked and what she disliked.

BACK in the Pullman they did not talk long. The tiredness behind the eyes that came frequently since he had left the hospital was there sharply tonight and he thought: I must be hollow-eyed enough to look like a hero. His berth was one of the first made up. She said, as he left her, "You can tell me about Mexico tomorrow. I've never been there."

"A pleasure," he said. It was a good omen and he supposed he should feel pleasure, a sense of triumph, but he was too tired. He slept heavily, waking into the half-light of the berth. He pulled the shade open a little and the Texas sun blinded him.

Everyone else in the car was up before him, the girl at her knitting again. He saw her face, intent, the head bent, as he walked toward the diner and before she saw him. He felt a kind of sorrow for her, nameless, which he did not allow to remain long. "I suppose you've had breakfast," he said.

"A long time ago." Her face was quite bright as she looked up at him, longer than courtesy required, he noted. He said, "I'll be right back."

It was almost noon when he returned and sat by her side.

"What's Querétaro like?" she said. "I'll have to wait there for a train."

"It's a quiet city," Camoens said. "Very Mexican, like Guadalajara and all Mexican cities except Mexico City itself, which is like Paris or Brooklyn or Boston."

"You mustn't have seen much of Paris," she said.

"No," he said. "I was a kid, then, a long time ago."

"And what else about Querétaro?"

"Oh, Maximilian was shot there, with a general on each side of him... It's a good town to walk in. The buildings are very old and you get a strong sense of antiquity there... I wish I could walk in it with you."

"I wish you could, too," she said. He looked quickly at her, seeing now the attention too close to the knitting, the head turned too definitely away. The charm, he thought, like water in a tap, but felt uneasy and without pride. He did not press her, as much because of his own inner embarrassment as from a feeling that silence was indicated at the moment. He said after a while, "We're late and we'll probably be late at the border. You'll have to get up in the middle of the night for the customs and immigration inspection. Or stay up. You ought to try to nap this afternoon."

She was trying to knit faster, he saw. He felt embarrassed himself and would not look at her face. Her voice was uneven as she said, "Sometimes things seem

## A 4 ★ HIT in the SOLOMONS

On the screen, *It Started with Eve*  
A Universal Production

Look at them and be proud of them! As tough a bunch of hard-fighting marines and soldiers as ever outslugged the Japs. But now in a moment of leisure in a jungle setting, a screen goes up and a Bell & Howell Filmosound gives them the latest smash hit from Hollywood. Tired bodies are refreshed, taut nerves are relaxed, and they go back to their job of fighting—*fit to fight*.

To bring the movies of the homeland to its fighting men all over the globe is but part of the Bell & Howell war effort. For the home front there are Filmosound Projectors and the Filmosound Rental or Purchase Library of over 3,000 subjects.

Filmo cameras and projectors are also helping to train our armed forces. From the movies made and projected with this equipment they learn about the weapons, tactics, and strategies of war.

Some of the Most Timely Filmosound Library Subjects  
*Emergency First Aid... Gardens for Victory... Caucasian Barrier... Milestones of Democracy... Winning Your Wings (with Jimmy Stewart)—and hundreds of others. Write for details.*

to happen very fast. Has it ever been that way with you?"

"No," George Camoens said, "not in a long time." Without any feeling of triumph, and knowing that the coincidence would not be much of a one, he followed the pattern the processes of his mind had indicated at the beginning of this. He said, "What ship is your brother on?"

"The Sheldrake," she said. "I imagine, from what he wrote, it's going to be risky."

"Most mine sweepers are," Camoens said.

"How did you know it was that?"

He drew a breath, sighed, and said, "They're all named for birds." He had almost said it then, but didn't. He would let it follow the original pattern. He said, "Maybe the boat will be gone when you get there." It would be, he knew.

"I know. I'm just taking the chance."

He could look at the good face now. The certainty was back in it. He touched her hand lightly and she stopped knitting. "You're a fine girl."

"It doesn't make much sense, does it?" she said. Her voice had changed again: "You must think I'm crazy. I think I'm crazy, myself."

Camoens could not speak. The charm would not function. He felt dull and stupid and concluded that maybe that was the way he was. She said, the voice only partly controlled, "You'll have to excuse me," and rose.

"How about lunch?" he said.

"No. Thanks." She shook her head and was gone. He went to the diner again and sat there and then sat in the observation car a long time. The sun was setting when he went back to the Pullman and the train had made up a lot of time and was coming into San Antonio. The girl was not in the car and her bags were gone. With something like concern, but for which he had no name, Camoens asked the porter if Miss Hammel had gotten off the train. The porter said she had rented a vacant compartment.

Camoens was going to knock on the door of the compartment but didn't. He went back to the observation car, picked up the Railroad Guide and began to read it.

**I**T WAS very dark when they got out at the station in Nuevo Laredo, and *cargadors* carried their bags into the Mexican customs room and laid them on the polished granite tables. The girl was the last one into the big room and when Camoens greeted her, her *cargador* carried her bags over to the table and put them beside Camoens. "They believe, judging by the tables," Camoens said, "that taxes are among the more permanent features of civilization. The tables look like something out of a Roman bath."

He noticed her pallor as she smiled. It became her, even in the thin, uneven light of the place. "A terrible time to get up, isn't it?" she said. She was going to try to keep the conversation on an impersonal level, Camoens saw. Her *cargador* spoke to him in Spanish and Camoens replied.

"What did he say?" the girl asked.

"Apparently he's worried about his tip after he takes the bags back to the car. He asked if you were my wife."

"And you replied?"

"I said, 'Alas, no.'"

She turned away, sober and tender and unsmiling. So now it was all set up, Camoens told himself. The customs inspectors were working toward them along the table. The man started to open Camoens' bag, and the fat woman in black opened the girl's. The man lifted Camoens' raincoat and there, just underneath it, were the uniforms, with one

sleeve showing the gold star and the gold stripe-and-a-half. The inspector closed the bag and grinned, calling him captain Camoens smiled thinly back and said "Solo teniente." He could feel the girl staring. The silence was the feel. The inspector said, "Mucho gusto," and moved on.

On the way back to the cars, the girl said, "Why didn't you tell me what you were?"

"I told you my right name," he said.

"I see what you mean," she said, after a moment. "But shouldn't you be wearing it?"

"Coming down here into another country, I was told not to."

"I suppose I should apologize."

"No." He watched the *cargador* put the bags on the car platform and then he walked back to the observation car with the girl and got on. It was empty now, a three in the morning. The train started without warning and she was thrown against him. It was almost as though he had ordained that, too, he thought, and laughed inwardly as he kissed her. She stayed close to him, awkwardly turned and he realized that she was either younger or more innocent than he had thought her to be.

"It's crazy for anything to happen as fast as this and then to think that it matters, isn't it?" She sounded very young.

"Yes, I think so." He felt it was the first truthful thing he had said that day. He kissed her again, less hard than before, and said, "Love should come out of something of longer duration than this." What else, professor? he mocked himself.

**T**HE train moved very fast over the plains of Tamaulipas and in a little while they could see the mountains of Nuevo Leon come up into the heavens. The mountains rose up against the starlight of the clear and moonless sky and Camoens told himself that it had gone far enough. He had planned the end, his small and somewhat grim satisfaction for Monterrey, when she, now caring would know he was going on the same ship as her brother, the ship she did not yet know she would never see. Camoens' mind was troubled and he bent and kissed her again rather than seek the cause.

She said, "Do you think that sometime, when things are better, and when I've grown up more, you'll maybe love me?"

He didn't know why it had to be like this, he told himself, and said, "I don't love anyone. I think it's a lucky way to be in a war."

She put her arms around his chest, under his arms, so that it hurt him where the rib had been broken as he jumped for the last boat clearing the falls. "You're very wise," she said. "I like you for that."

"You're a very fine girl," he said, "as I told you before. I hope you don't get hurt."

"What do you mean?"

"Only that."

It was colder as the train climbed up into the mountains through the high pass. He didn't have to tell her where he was going, he told himself. He would just get off at Monterrey and make his plane connection. She was a good kid. He thought, with the irony which now gave him no pleasure, that it was curious he should be so relatively calm. In the beginning between them it had not been that way. He could see, over her shoulder, the first light coming up through the saw-toothed mountains to the south and east. She said, "After I see my brother in Mazatlán, I could come back to Mexico City. Maybe you'll be there, attached to the embassy?"

ishful thinking, he told himself; that another thing he had gotten over. said, slowly, so as not to give any away, "No. I'm getting off in a while at Monterrey."

hen there won't be any chance of eg you again?"

he hesitated without meaning to. "I ot it."

Vell, anyhow," she said, "I'm glad aren't going to be on the same boat y brother. It's bad enough having on that kind of a boat. I'll tell him but you when I see him. I ought to be uerétaro tomorrow night and then in atlán a few days. I'll tell him, then."

moens didn't speak for a long time. hi he asked her if there was something portant she had to tell her brother.

don't know whether anyone else d think it was important or not. You he and I are orphans and we're the close relatives left to each other.

es," Camoens said. *Yes, George, are certainly a smooth article. You it on and off like water in a tap.* He osed it was better to do what he d. So he told her what he had ned to tell her now, but muting and ging it as best he could, to not hurt s originally he had planned to hurt

ook," he said, "I expect to see your ner . . . and I don't think you'll get e him. We sail tonight. I'm flying through Torreón." He heard her and he said quickly, "I wouldn't y too much if I were you. There's ing extraordinarily dangerous about e we're going," he lied. "He prob- just heard some grapevine rumors hey're mostly wrong. Honestly. I'll him your love and tell him anything you want me to. Why, we'll all be ng a drink in Acapulco maybe in a le months."

er face changed. In the changing gher face was incredibly mobile algh the features seemed hardly to ce. "Oh, you're good," she said.

he shook his head involuntarily and as gh to clear it from a blow. Patting oulder, he said, "You go write him te and by that time, we'll be in terrey. Hurry, now."

She moved ahead of him through the cars, her grace restored to her. He did not find credible his memory of her young awkwardness against him.

The train was in the station by the time he had gathered his belongings. In its cup of mountains, Monterrey was still hidden from the sun, but a pale, clear and washing light lay on the station, the train and all the city. Camoens waited patiently outside the cars. The porters got on the train and as it started to move, the girl came to the still open doorway of their car. Camoens took the envelope of expensive paper from her hand, smelling the delicate scent in the still, clear mountain air. "Thank you," she said, "a great deal. You can write to me care of the embassy down here. I'll be down a couple of months. You—" he missed the last words. She blew him a kiss and Camoens smiled at the youngness of the gesture in that place and that time.

HE TOLD the *cargador* to take his luggage to a cab and he told the cab driver to go to the airport. It was not until they were on the edge of the city that the sense of loss came to him. He gasped at the sudden and unexpected agony of it and, in something that might have been anger, hit the shatterproof glass with his fist. A small, unsatisfactory crack appeared in it. The driver looked back and said respectfully, in bad English, "Sir, that is much valuable and you have lost it."

"I know," George Camoens said in Spanish; "and I will pay for it. I am always losing valuable things. Do me the favor to drive on."

"Yes, sir," the driver said.

They went on and when they could see the field, there was the old-style mono-plane, trimotored, waiting, its propeller idling in the new sun, and near it a few people looking anxiously toward where the late cab was now finally approaching.

The anger, or the thing that was like anger, had almost gone. Incredibly, he believed that he would see her again. He even saw the place; in April, in some Southern garden. He got out of the cab, and the pilot, knowing who Camoens was, saluted him.

THE END

"Just the same, I feel safer with it this way"

# Mortgage on a Dog

By Vereen Bell

ILLUSTRATED BY  
HARRY BECKHOFF

The deputy folded the mattress with Jud's bird dog, Fred, inside, and stumbled out with it.

The trouble with Old Fred is he's just too good for these here field trials. He's just as apt as not to point a judge that's had birds for breakfast

JUD LEE lay hiding underneath the elderberry bush chewing contentedly on a sweet-gum stem when his small son came and said, "Pa! It ain't that little old fool from the bank this time. It's a big old fool with a revolver in his belt, and he's gittin' ready to load our stuff on his truck."

Jud stared incredulously. "If that bank has set the sheriff onto me just because I owe three years of rent," he said ominously, "I just be durn if I ain't goan git mad! They just keep worrying me and worrying me about that old money, and I ain't goan put up with it much longer."

The sheriff spoke to him pleasantly and the deputy nodded as he brought out a chair and put it in the truck.

"Sheriff," Jud said, "let's talk this over. If you put me out of here, my little fambly won't have nowheres to go at."

"You had the money after your dog won them trials, and you spent it, and the bank says for me to turn you out and that's all there is to it." He spoke to his deputy. "Keep the stuff coming, Alwin."

Jud watched his meager belongings being loaded. They were *really* going to throw him out.

From the interior the deputy called, "Sheriff, he's got a right nice bed in here, but there's a dog laying on it and he keeps growling at me when I try to git him off."

"Bring the bed on out, dog and all."

The deputy folded the mattress with Jud's bird dog, Fred, inside, and came stumbling out with it. He opened it up on the truck, and Fred looked around and then went back to sleep.

"Sheriff," Jud said, suddenly, "I've thought up sump'm. There's a doctor in town, and he's stuck on that durn dog yonder, and I bet I could git him to make me a loan on Fred!"

The sheriff motioned to his deputy. "Just wait, Alwin." He said to Jud, "The bank said that I wasn't to listen to nothing you said, unless you happened to mention selling a valuable dog you had. They never spoke of mortgaging no dog, but if they git the money that's all they care about. Come on and we'll go to town. I'll go, and we'll take the dog."

THE receptionist in Doctor Ingram's office told Jud that the doctor was in but busy.

Jud said, "Shuh, he'll drop whatever he's doing when he hears it's about my old dog Fred." And without waiting, he pushed through the door to the doctor's office before the receptionist could get up to stop him.

The doctor was examining a woman patient when Jud burst in. The woman gave a horrified scream. The startled doctor pushed Jud outside and shut the door.

"You idiot, you shouldn't have come bursting in there like that!" the doctor said angrily.

"Shuh, Doc, don't worry none. Stuff like that don't embarrass me. Let me tel you my proposition."

"If you've got a proposition, tell it to me quickly."

Jud's face saddened. "Well, the sheriff's out at my place a-fixing to turn my little fambly out into the cold."

"That's exactly what he should do Goodby."

"Wait. You've always had a hankering to buy my dog Fred."

The doctor's interest quickened. "You mean you're actually willing to sell Fred to save your farm?"

"Not exactly. I figured to mortgage him to you until another one them trials and then I would win the money to pay you back."

The doctor's eyes gleamed briefly. "Jud, the only reason I would consider such a proposition is because it may end in my owning the dog. I warn you about that. Now there's an open trial at Spencer this week end. I'll pay the bank sixty dollars—one year's rent, enough to stal them off for several months—and I'll pu

## Hitler came the closest . . . by using the air

Recurring attempts to conquer the world bloody the pages of history. Let us tabloid the tale: When the ancient *flat* world bordered the middle ocean, the Mediterranean, conspicuous contenders were the Carthaginians and Romans. With the discovery that the earth is *round*, attempts at world-conquest grew in intensity on a widening scale: Philip II, Louis XIV, Napoleon, William of Hohenzollern! Until World War I, battles were confined to the earth's *surface*. Then came the dress rehearsal, in Spain, for World War II, with

aviation the dominant factor. "It was the handwriting, not on the wall of Belshazzar's Palace, but upon the universal sky for all mankind to read." This, the first global-war, is the birth pain of the human race entering its greatest era, the Air Age. To hasten victory, our entire aviation industry continues to perform miracles of war-plane production. But the ocean-of-air will remain after this war, *and we must remain dominant in it*. To that end too Vultee labors, because the Air Age has just begun.

VULTEE AIRCRAFT, INC., VULTEE FIELD, CALIFORNIA

## VITAMINS FOR VICTORY

Even vitamins will help to win the war and Uncle Sam is making certain that his men are getting plenty of vitamin-rich fresh vegetables and fruits.

Carrots, for example, are of particular importance to the air force. In addition to health-building Vitamin A

they also provide Carotene which helps to prevent night blindness.

From the fields of the West, Union Pacific transports immense quantities of fresh vegetables and fruits to military supply depots and civilian markets.

It's a patriotic duty for *all Americans* to keep fit. Eat vitamins for victory!

*The Progressive*

### UNION PACIFIC RAILROAD

ROAD OF THE STREAMLINERS AND THE CHALLENGERS

up the forty-dollar entry fee at Spencer, and I'll give you thirty dollars for transportation and expenses. Miss Monroc, please go with Mr. Lee to my lawyer's office and have him draw up an airtight lien on his dog Fred for the sum of one hundred and thirty dollars. I'll keep the dog here until you get back. Remember, Jud, next week bring either a hundred and thirty dollars or my dog Fred."

WITH thirty dollars cash money in his pocket and the bird dog Fred at his heels, Jud had started to the bus station to learn the bus schedule when he passed a used-car lot. At once it occurred to him that, if he was going to be traveling here and there following field trials, it would really be better to have his own car to drive. He got into conversation with the salesman, and went from one car to another, and finally, in the absolute back of the lot, they came to the vehicle the salesman was willing to let go for a cash down payment of twenty-five dollars.

The car did run pretty good, for the shape it was in, and Jud drove around town a couple of times, with Fred holding his head out the back window and prining into the breeze. When he stopped, Clem Frisby, who had come to town to get some new calendars, approached him.

"Well, Jud, you acting mighty biggity, now that you got a car. Passed me right y while ago without a lift of a finger." "I swear I never seen you, Clem, er I'd shore retched out and wove to you. Me and my money-making dog is all set to go win a field trial. Git in and go. We'll be back Monday er so."

"I'd shore like to see old Fred out-unt them city dogs," Clem said, "but ght here at the end of the physical year when the stores is giving out new calendars, I ought to stay on the job."

"Git in. You got enough calendars." Clem hesitated another moment, and finally unloaded his armful of rolled-up calendars on the floor of the back seat and got in. "Okay," he said with an excited grin, "let 'er go."

Spencer was a hundred and fifty miles away, and after a while the novelty of the ride began to wear off, and as night came Clem and Fred went to sleep. The car rocketed through the darkness, its light blinking occasionally. For an hour the motor ran as smoothly as could be expected, and then suddenly began a rapid, hammering knock that grew in intensity until Clem roused up and Fred shook his head inquiringly. Jud kept the accelerator pedal on the floor.

Finally Clem shouted, "Don't it sound to you like one them bearings is burnt out a little bit?"

"Yep. Sounds like it."

Clem went back to sleep. The knocking grew still louder. Clem woke up and said, "If that thing's going to keep up ch-ch-all a rackët as that, let's stop and fix it."

The next town was fairly large. They were reluctant to slow down for fear the car wouldn't crank again, so they leaned out and yelled, "Where's a garage at?" but the few passersby who were able to understand them above the clatter were so astonished to answer in time, so Clem said, "I'll hop out and git the inflammation and catch you coming round the block." Jud circled the block. Clem was waiting but missed him on the first round, and Jud had to circle again.

Clem directed him to the garage, and they drove in the whole night shift of mechanics came near and regarded the car interestedly.

"We want to git a bearing fixed, and we're in sort of a hurry," Jud said. "How much will it cost?"

"Can't tell, offhand," said the foreman. "Maybe you've busted a piston too. We'll take a look."

A half-hour later he said, "This repair job will cost you about fifteen dollars."

Jud said, "Fifteen dollars! You must think I'm made of money! Can't you fix up a bearing out of a piece of old shoe leather?"

"Not hardly," he answered. "Might as well git it fixed. You can't run like that—the burnt-out bearing driving the piston will wear your crankshaft down, and then you'll really be into it."

"Tell you what," Jud said. "Just take the durned old piston plumb out."

"You can't do that. There's another piston has to operate in rhythm with it. They'll be out of balance and she'll go to pieces."

"Then take the other piston out, too," Jud instructed.

THE garageman argued, but Jud insisted. So they took out two pistons, crammed cardboard into the empty cylinders to keep any stray raw gas from leaking into the crankcase, and the job was done. When time came to crank up all the garage employees retreated to the other end. Clem stood down, too.

The motor started all right, and the four cylinders that had pistons fired fine; but there was a break in the roar when time came for the empty cylinders to fire. This caused the car to shake. Fred, in the back, held his seat with difficulty, and his face took on an apprehensive look.

Jud cut the motor, and Fred, having momentary purchase for his feet, sprang through the window and ran to the other end of the garage, where he hid beneath a disabled car.

"You come here, sah!" Jud called. But Fred didn't come until Jud crawled underneath and got him.

Again he cranked up, and someone got in beside him, but the vibration of the car was such that his companion was just a blur.

"That you, Clem?" Jud shouted.

"Yep. That you, Jud?" Clem shouted.

"Yep."

Out on the road again, the tailpipe shook loose from the muffler so that part of the exhaust gas seeped up through the floorboards, and Fred presently sank to the seat in a grateful semicoma.

Jud said, "What's that clicking noise I keep hearing?"

"It's my false teeth hitting together," Clem complained. "I shore hate fer them to git all chipped up."

"Here," Jud said. "Just hold this old croker sack between your teeth."

Clem bit down on the croker sack and it worked fine. The next thing that bothered him was the heat that threatened to scald his feet.

"Suppose she catches afire?" Clem shouted suddenly.

Jud thought a moment, and then his face lit up. "She's insured, so the man says. Just before we git to Spencer, if she'd catch and burn up, it would be right nice. We'd be there, and git our money back too. Now if she catches, you grab your calendars, and I'll grab old Fred, and we'll git out and let 'er burn up."

"Reckon we hadn't ought to have a little fire drill?" Clem suggested. "I'd hate to forget to save my calendars."

"Ain't a bad idea," Jud said. "After while, now, I'll make out she's afire, and we'll practice up."

"That's it, do it when I ain't expectant."

Presently Jud slammed on the brakes and shouted, "She's afire!" Clem grabbed his calendars, and Jud dragged out the torpid bird dog.

"We got it down pat," Clem said with

satisfaction. "What's the matter with Fred? He looks sorta sick."

"Just sulling," Jud said. "He'll be all right when he sees we're a-going bird-hunting."

Just before dawn, with the croker sack in his mouth straining Clem's snores, the car really did catch fire. Jud slammed on brakes and cried, "Clem, she's afire shore enough!"

Clem stumbled out, still holding the sack between his teeth. Jud, dragging Fred out, didn't see that Clem had opened the hood, and in his half-sleep state was throwing sand on the blazing motor. The fire quickly smothered.

"Well, I'll just be durned," Jud said in disgust. "Look what you went and done. You act to me like you ain't never had nothing insured before!"

With Clem chewing apologetically on the sack, Jud cranked up angrily and they drove on.

THE field trial assembly was waiting impatiently when Jud's car drove up, stopped and backfired, causing Judge Rice's horse to rear. The field-trial judge was angry even before that.

"Is that the post entry Dr. Ingram phoned in last night?" he asked Jud, when Fred staggered shakily out.

"Yep," Jud said. "His name is Fred and he's raring to go."

Judge Rice bit off his words. "So are we, Mr. Lee. We've been waiting here ten minutes. You're in the first brace. Next time, be here when you're supposed to."

Jud said to Clem, "He sounds like somebody with a guvment job."

The judges rode out to the front of the gallery, and the secretary of the club announced, "First brace, Wildwood Jack and Fred. Bring your dogs forward."

Wildwood Jack was eager, jumping about and straining in the grasp of his handler. Fred trotted alongside Jud with a fatuous grin on his face. When they were out front, the big judge glanced at his watch. He started to say, "Are you ready, gentlemen?" but then looked at Jud and said, "Are you ready, men?"

Wildwood Jack broke away in quick jumps the instant of release. Fred strolled forward a few steps, then lay down and panted contentedly. The gallery, already impatient to get started, was forced to draw up to prevent running over Fred.

"Your dog," Judge Rice said elaborately, "doesn't quite show the drive we like to see in a class dog."

"Judge," Jud said worriedly, "somebody has tampered with that dog. Fred, you git going, sah!"

Fred wagged his tail briefly, and put his head on his legs.

"That dog ain't at hisself. He don't belong to lay there like that," Jud said, "and he don't belong to wag his tail."

Clem had gone back to the car, intending to follow in it as best he could, in company with the dog wagons and a spectator truck. Finally he got it cranked and underway. Fred, hearing the unmistakable racking noise of the motor, lifted his head in alarm. As the sound drew nearer, Fred got his feet up and started running.

With Fred on his way, Jud steered his horse to the rear of the gallery where Clem followed in the car.

"Something bad ails old Fred. Maybe I should have give him a thorough of medicine before we come," Jud said. "But it's too late now. Listen to me, Clem. If we can keep him out yonder in front, maybe he'll git back at hisself. He's took it into his head that he don't like our car, so if he tries to quit again, I'll raise up my hand and you race the motor to beat all hell, so he can hear it."

Clem accepted this responsibility with

**T**HE Piper L-4 plane is already proving its worth as the "Eyes of the Artillery" on the fighting fronts. Called the "Grasshopper" by artillerymen, it makes an ideal elevated observation post. The observer sends firing corrections by radio to the battery until the guns blast the target.

The plane's protection is low-altitude flying, ability to land quickly and be hidden easily, and the fact that it is practically invisible from above, even when in flight.

The Piper L-4 also serves the Tank Corps, Cavalry and Infantry . . . directing troop movements, transporting personnel, delivering messages and spotting enemy infiltration.

And, when victory is won, a peacetime version of the Piper L-4 will take you quickly and safely to your favorite hunting, fishing and vacation spots, and streamline your business trips . . . saving time, gasoline and tires.

**FREE BOOKLET ON HOW TO FLY.** Send today for your copy of the easy-to-understand booklet "You, Too, Can Fly!" If you also want the full-color Piper catalog, enclose 10c in stamps or coin for postage-handling.

# PIPER

POINTS THE WAY TO WINGS FOR ALL AMERICANS

pride. "We'll work in co-ornication and keep old Fred a-going," he said.

Wildwood Jack found birds. It was a small covey huddled in a hawthorne thicket, and when they burst out the other side, the dog was steady to wing and shot, and the gallery murmured in approval. Jack was sent away, and he raced along the fringe of a cornfield.

Fred had not been seen since the initial sprint which carried him over the hill and out of sight. On the right side of the course was a creek swamp, on the left beyond the broad and varying avenue of fields, a body of shortleaf pine woods. Jud began to wonder, worriedly, if Fred had taken it into his head to run away.

But presently, after galloping his horse hard, he found him. Fred was asleep in a patch of sunlight in the woods.

"I'm plumb disgusted at you," Jud said angrily. "Git up and go to work. Er do you want to do your hunting from now on with an old fool doctor that smells like sheep-dip?"

**F**RED made no effort to get going, but lay there looking up at Jud lazily. Presently, however, the gallery drew near. Jud moved his horse out into the clear and held up his hand to Clem. Quickly there came the racing and badly broken rhythm of the old car. Fred lifted his head in sudden alarm, and the next instant he sprang away and headed across the cornfield.

This second sprint cleared Fred's lungs somewhat of the gas, and instead of disappearing into the woods on the other side for another nap, he swung back out in front, far ahead of the gallery and gave the appearance of hunting. In fact, when Wildwood Jack found his third covey, Fred was in the vicinity and seeing his brace mate on birds, honored the point.

"Well, I'm glad to find out the old fool will back," Jud said. "First time another dog ever found a covey in front of him."

Mrs. Terrill, who owned the hunting preserve the trials were being run on, drew her frothing horse alongside Jud and said, "Is that really so, Mr. Lee?"

"It's the truth, ma'am, and you know the truth will go from here to heaven."

"I do hope your dog is feeling well," she said.

"No'm, he ain't." He leaned slightly toward her and whispered, "I'm thinking he's been messed with."

Her eyes opened wide in horror. "Why, the poor thing! How terrible!"

But Fred was doing better now. He was covering his ground nicely, and Jud figured that if he could get him on birds a couple of times he might have a chance to be called back in the second series, even though Wildwood Jack had him beat on finds. But whereas Fred was now willing to hunt, his nose was badly off, and was proved a few minutes later.

Fred was seen to strike scent near a gallberry clump, then to turn, draw a few steps and point in fine style. Jud shouted, "He's got 'em, Judge, shore'n hell," and they rode to the place.

Jud dismounted, and with his gun in hand walked toward the pointing dog. Just as he got there, however, a sow with eight little pigs, to Fred's astonishment, emerged from the gallberry clump and with offended dignity, walked away.

"Did you ever see the beat of that?" Jud demanded in amazement.

"I certainly did not," said Judge Rice coldly.

With ten minutes left to run, Jud became desperate. *I'm shore about to lose my old dog to that doctor.* Then Fred came in from a long swing out to one side, and just as he was about to pass the front of the gallery he wheeled and

pointed. Every horse was drawn to quick stop.

"Your dog is pointing straight toward me," Judge Rice said puzzled.

"You must be standing right spang the middle of the covey," Jud said. "Back up real easy like and maybe they won't flush."

The judge backed his horse, then drew him around to one side. But strangely, Fred slowly turned with the man, still pointing. The judge, perceiving this, moved all the way around the dog, and Fred kept moving with him, pointing.

"Lee," Judge Rice shouted, furiously, "your dog is pointing me."

"I'll be darn if he ain't! First a sow and then you," Jud said. "Judge, you didn't eat quail for breakfast, did you?"

"No, I did not!"

"Judge, you right sure you ain't et no quail today?"

"I have not!" roared the judge. "Make that dog stop pointing me, Lee, and furthermore, don't ever run him in another field I'm judging, you understand?" He rode off.

After another brace had been put down and the gallery moved on, Clem and Jud were sitting on the running board, with Fred tied to keep him from running away from the old car.

"Well, I guess I've lost my old dog sure enough," Jud said, and tears rose in his eyes.

"I ain't never seen him zibit so many idiocentricities," Clem said. "It turned out to be a pretty good deal for that doctor."

Jud straightened. "Clem, listen here. When I went up to see that lawyer, that doctor made me leave the dog in his office! You know what he done? He gave Fred a dose of some kind of pizen, to make him act like that so I couldn't win!"

Clem ejaculated, "I just be darn!"

At this moment portly Mrs. Terrill rode back. "I couldn't go away without telling you how sorry I am that you lost Mr. Lee," she said. "But I'm sure you must be wrong when you say someone tampered with your dog."

"No, I ain't wrong," Jud shouted, "and I've done figured out the very scoun'l what done it!"

**T**HAT afternoon Mrs. Terrill's big car stopped in front of Doctor Ingram's building, and out got Jud and Clem and the dog Fred, and Mrs. Terrill, and an officer of the S.P.C.A. and a policeman. They went inside.

Doctor Ingram, in a bright herringbone suit, looked at the assembly in amazement.

Jud spoke. "First thing is to give you your old money back. Here she is, a hundred and thirty dollars. Now you ain't got no more mortgage on my dog."

"Congratulations!" the doctor said. "Fred must have won!"

"You ain't fooling nobody with that made-up friendship. This fat lady here give me the money and took over the mortgage. Fred never won that field trial and you know how come!"

"What on earth are you talking about?"

The S.P.C.A. officer said gently, "Let us handle this from here, Mr. Lee."

The outraged protests of the doctor got pretty loud, so Jud and Clem slipped out the door for quieter surroundings.

"It just goes to show you," Jud said darkly, "that you can't tell who to trust in this world. I shore wouldn't a-thought it of that doctor."

"He shore turned out to be a wolf in cheap clothing," Clem said.

They walked on. Finally Jud said, "You know, Clem, I still think that judge had et quail for breakfast."

## Keeping 'Em Up... Bringing 'Em Down

THE fighting men and the civilian populations of the United Nations are protected

with the finest anti-aircraft defense in the world. The ability of anti-aircraft gunfire to keep enemy planes high—to bring enemy planes down—depends on effective controlling mechanism. Its "eyes" are the Anti-Aircraft Height Finder. Designed by Americans—made by Americans, this intricate observing and computing instrument is part of the "mechanical brain" that makes the aiming, fuse setting and firing of anti-aircraft guns a matter of automatic pre-

cision. The reputation of deadly accuracy of the Yank ack-acks keeps enemy planes at high altitudes, out of effective range—away from vital objectives.

The Anti-Aircraft Height Finder is but one of many Bausch & Lomb optical instruments used on fighting fronts to hasten Victory. Back of the lines, too, Bausch & Lomb products—such as Microscopes, Metallographic and Spectrographic Apparatus, and Contour Measuring Projectors—all essential in research, inspection and quality control, are speeding production of vital war materials. And in factories that hum and

glow, day and night, American men and women are working longer, more effectively and with less fatigue because their eyesight, corrected through the professional and technical skills of eyesight experts, is at top efficiency.

"and they like it so well they buy some more, and then the man is called a bootlegger." Not called a bootlegger, Mr. Wullschleger; is a bootlegger.

ONE of our authors, James Street, is hurt because in his story called All Out With Sherman, we cut out an incident which he treasured. What Mr. Street was particularly intent on stressing was the origin of the phrase "War is hell." According to the version still current in Mississippi, Sherman was not filled with dark and philosophical views when he uttered the famous words. They came after he had been dumped out of a wagon in a swamp. "The day was hot and Sherman had a hang-over," Mr. Street relates, "and when the wagon turned over, it got him, so he said, bitterly, 'War is hell.'"

FROM Miss Grace E. Ray of Norman, Oklahoma, the seat of the University of Oklahoma, where, doubtless, democracy is considered an important study as well as a priceless boon, we learn that the Navy personnel in that area includes Negroes. "But," explains Miss Ray, "Norman has been declared out of bounds for them, since by tradition Norman has never permitted a Negro to remain in town overnight. Some of the construction workers are Negroes and they may be seen in the Norman streets in the evening but never remain in town overnight; and no Norman woman may have a Negro servant in her employ. The neighbors simply call on the person importing one and ask that the Negro be sent out of town. And the Negro is sent out."

HAPPILY, Mrs. Mildred P. Scott, of Brooklyn, New York, finds this magazine an educational institution of great worth. She bases this on the fact that her son Carl, "who is completely allergic to school, studying, or even reading books (other than the horror 'comic books'), accidentally read a few lines of your issue of January 16th and thinks he has caught you in an error." According

to Carl, a picture we labeled as a Jap Zero is actually a U. S. Republic P-47. He gives quite learned and convincing reasons for his belief, but what interests his mother is another matter. "How all this information got inside him, I don't know; but try to make some mention of it for my sake. Maybe it will encourage him to read a couple more lines some day."

WE ARE grateful to Mrs. Scott for bringing up the subject of reading, because it gives us a chance to comment upon government questionnaires, a question that has been agitating various humorists, stray congressmen and

harassed manufacturers. F. X. Neuhau of Grand Rapids, Michigan, has forwarded us a burlesque questionnaire whose high light seems to be a line that reads: "If you have no color or creed check here." But we have come up with another bit of literature—this time the real thing—that intrigues us even more. It is the insurance pamphlet handed out to young men just after they have been inducted into the Armed Forces at the draft boards. It urges the selectees most strenuously to take out insurance and headed, very delicately: "HERE TODAY GONE TOMORROW." Let nobody ever tell you there isn't at least one genius at work in government service. . . . K. C.

## Big Freeze

Continued from page 34

Chicago, Wirtz got an idea. He rounded up some of the best skaters he could find, bought a few hundred dollars' worth of scenery and ran a one-night "figure-skating exhibition" on the hockey rink of the huge Chicago Stadium. It drew \$11,000 for the single performance.

"H'mm," said Wirtz, "I think I've got something here."

He decided to get a collection of pros and try his ice-show experiment for two nights on January 31 and February 1, 1936. The show cost him \$3,500. It drew \$33,000, and Chicago clamored wildly for more.

But now he had a star attraction without a single big name. There was only one name in figure skating in those days—a 23-year-old blond amateur from Norway, who was just then in the process of winning her third Olympic championship, Sonja Henie.

Wirtz sent her this cable: "Will you turn pro for three thousand dollars a night?"

Sonja answered: "For three thousand dollars a night, anyone will turn pro. Where do I meet you in New York?"

When she got here, Wirtz signed her

for \$12,000 for four performances in the Chicago Stadium. That was the beginning of the Wirtz-Henie association that has lasted down to today.

So Wirtz now had four stadiums, three hockey teams and a million-dollar touring ice show that kept his arenas occupied during the hockey off season. Also, he picked up a bit of extra change by running the Henie show into Madison Square Garden and a few other choice spots every year.

### A Problem in Personnel

In 1939, Wirtz sent Bill Burke to England to buy up all available English skating talent, which Burke literally proceeded to do. He purchased two complete shows. These Wirtz combined into the European Ice Review, which kept the Wirtz arenas occupied during the Sonja Henie off season.

But now poor Wirtz had another problem. It was a farm-team problem, just as in hockey. How was he going to develop young skaters for the touring shows and keep the older skaters satisfied and employed for fifty-two weeks

out of the year? The touring shows lasted thirteen weeks at the most.

This is how the white elephant Ceter Theater in New York became the first ice theater in the country. Wirtz leased it for five years and ran two shows called It Happens on Ice and Stars on Ice into it consecutively. By this time, the best choreographers, scene designers and dance directors in the theater were deserting to him in droves. His casting was done among kids who just wandered in and asked for auditions.

It Happens on Ice received one of the most merciless pastings in history from the dramatic critics when it opened on October 10, 1940. It closed on April 26, 1942, eighteen months later. Stars on Ice threatens to go on forever.

As for the future, Wirtz, who is having his hands full trying to raise a family, manage his business and tend to his hobby at one and the same time, shudders to think of it.

"There are only twenty cities in the country equipped to handle ice shows now," he says. "Think of what's going to happen after the war."

THE END

## Sign language for a naval victory

WITHIN THIS TEST ROOM, a sea fight with Axis war vessels is being weighted heavily in favor of one of the Navy's slashing motor torpedo boats.

Taking place here is an important reason why these PT boats have already sunk over 250,000 tons of Jap war vessels!

This giant 12-cylinder Packard marine engine just completing a brutal workout—its "green" as the engineers call it. For 8 long hours, each cylinder has been pouring out as much power as the entire motor in your Packard car.

Suddenly, the chief test engineer throws a switch. He checks his gauges and instruments, then motions to the crew in the test room. "Test run O.K.—take it away for tear-down!"

Now the huge engine will be completely taken apart. Each part will be painstakingly checked

and tested to make sure it withstood its gruelling punishment. Then it will be re-assembled and test-run again for 4 hours, in accordance with exacting Navy specifications.

Perhaps you think this is carrying perfection to the *nth* degree. And you're right. But that's the way Packard builds engines.

It's also the way Packard builds Rolls-Royce aircraft engines for U. S. Warhawks. And for British Hurricanes, Lancasters and Mosquitoes that have bombed, strafed and blasted Nazis from Africa to Hitler's doors in Berlin.

Today's hair-splitting standards of precision manufacture will enable Packard to pass on new benefits to you after the war. This added experience, and the training of a superbly skilled supervisory staff and thousands of precision-minded workmen, will be your assurance of a still finer post-war Packard car.

Ask The Man Who Owns One

... to make your car last longer

Your Packard Dealer has an ample supply of spare parts, and skilled mechanics who proudly wear the ODT badge. Drive in for a complete "Car Health Plan" check.

If you need a new car, and can qualify, brand-new '42 Packard Clippers are still available—and selected low-mileage used cars on which there are no sales restrictions.

# The Clark and the Clurk

By Oscar Schisgall

ILLUSTRATED BY EARL BLOSSOM

A SHORT SHORT STORY COMPLETE ON THIS PAGE

I mustered all the Cockney I could think of and said, "You're a bit of orl right, blighter." Limey answered in his best Brooklynese, "You're okay yourself, mug."

FINALLY, when I couldn't take any more of Oliver Henry's sarcasm, I got up and said in a grim voice, "Limey, I'm a quiet guy and I don't like to fight. But the time has come when you and me better go for a walk."

"My word!" he said, flat on his back and talking to the stars. "The man doesn't fancy being called a boor from Brooklyn."

I glared down at him. "Listen, you lug! You coming, or do I have to do it here?"

We were on the edge of a sandy hill, apart from the others. A full North African moon, scudding through clouds, gave us showers of yellow light. There were twenty of us in this British-American patrol. We'd set up a portable radio, and our job was to watch for Rommel's column. And while watching we were supposed to be a model of British-American co-operation.

Most of the English boys were all right; I had nothing against them—not even the way they talked. But this Oliver Henry was different—a lanky character from London, with a big, hooked nose, very bright eyes, and a feeling that Americans had a long way to go before they could be called civilized. What was worse, he liked to point out our shortcomings—especially mine.

Now he pushed himself to his feet, grinning. "You've a bit of a narsty tongue, me lad," he said. "Since you're *arskin'* to be 'urt, why, it'll be a pleasure to oblige."

I was boiling as we walked away from camp. We tried to look casual about it, so that nobody would guess what we had in mind. If the lieutenant had suspected we were going to fight, he'd have yanked us back in a second. As it was, he just saw a couple of men heading for the jumble of rocks and hills we called Latrine Boulevard.

The funny thing was I could have liked Oliver Henry. Big and homely and loose-jointed, he was a cheerful guy. Only, he'd rubbed me the wrong way from the start. When he asked what I used to do before the war and I told him I'd been a clerk, he sniffed as though the word had a bad smell.

"I expect you mean a *clark*."

"No," I said. "A *clurk*!"

"Odd," he said, sort of pitying me, "'ow you Americans always tyke the vulgar accent. Is that the w'y they teach in your schools?"

IT WENT on and on like that, with me getting madder and madder, until at last he made this crack about me being a boor from Brooklyn. That did it. I figured the only way to make him shut up for good was to bash in his big nose and loosen a few of his horse teeth.

About three hundred yards from camp we turned in behind some rocks where the shadows were black. "Okay," I said. "Put up your dukes."

He stared at my fists. Then he began to chuckle. "Oh, no, me lad. Not *that* w'y. Not 'arf. I 'appen to be a *wrestler*."

I guess I just blinked at that, feeling foolish.

"Still an' all," he said, "if you want to fight in that silly American w'y, I won't mind. I expect we could each fight the w'y we know best, wot?"

"You mean," I said, brightening, "me slugging, you grabbing?"

"Why not?"

"Limey," I said, "that suits me right down to a T! Let's go!"

We squared off, and I felt fine. The first time he came at me I shook him up with a jab to the right temple. It was so easy I almost laughed. Then he crouched and came in again.

I feinted with my left to make him turn

a bit—just far enough to set him up for a haymaker. Instead of turning, however, Limey grabbed my left arm. I didn't know how he got that double hold on it, wrist and elbow. I couldn't see exactly what he did, either. He got his shoulder under the arm, swung away and bent quick, and the next thing I knew flew over his back in a mighty somersault and landed with a smack in the sand, more surprised than hurt.

Limey sat on my chest, keeping my left arm under me and never letting go of my wrist. He asked, "Enough?"

That was funny. Couldn't he see my right arm was still free? His face, just above mine, was an open target. I could have broken his nose. I could have smashed his mouth. I could have banged him off me with one punch and got up to pound him into a mess.

Only, I didn't do it . . . because just then I had a peculiar thought that kept me still. I lay there, with Limey sitting on me, and I frowned up at him. Quite a long time must have passed; maybe minute.

He was about to talk when we both heard a sound—a rattle of pebbles. I didn't come from the direction of the camp. It came from the other side. Limey looked first. Then he let me go and whispered, "Gorblimey!"

I SAT up, staring. A couple of men with rifles were crawling toward the rocks—toward us. Their helmets were German. We were in black shadows, so they couldn't see us. But we hadn't brought any guns, and I was for letting out a yell for the boys in camp. But Oliver Henry squeezed my arm. He pulled me behind a rock, and we crouched there, waiting.

We didn't stir till the Germans were five feet from us. Then we jumped out. They didn't have time even to lift their rifles. I tore in and let the nearer one have it—a right to the face that broke out most of his teeth and dropped him like a log, unconscious.

When I looked around, Limey was swinging the second Heinie over his head the way he'd thrown me. He brought the fellow down with a terrible thud, at the same time he gave his arm a wrench, and I heard the crack of breaking bone. The German groaned once, then went limp.

Oliver Henry, breathing hard, straightened and glanced at the fellow I'd dropped. When he saw the smashed-up bleeding mouth, he stared at me in surprise. "S'y! That's quite a punch you gyve 'im! You didn't 'it me that 'ard!"

"No," I admitted. "But then, you didn't break my arm."

"I *could* 'ave," Oliver Henry said, but not boastfully.

"Uh-huh. I can see that. Why didn't you?"

Limey seemed embarrassed. "Well, after all, we were fightin' a *friendly* sort of fight," he said, as if defending himself. "I jolly well like to pull your leg about the w'y you talk an' such, but you didn't think I *ated* you, did you? I mean the w'y I *ate* these Germans—"

I began to grin.

"Besides—" He tried to make it sound less personal. "Why should I 'elp M' Itler by breaking the arm of a chap who's 'ere to fight 'im?"

"Limey," I said, still grinning, "those are the same thoughts that came to me—just about in time to save your nose." I held out my hand. As he took it, I told him, "I still don't like the way you talk but—" Then I mustered all the Cockney I could think of and said, "You're a bit of orl right, blighter."

Limey grinned, too. In his best Brooklynese he answered, "You're okay yourself, mug."

## When the mail brings HOME over there

EVERY returning fighting man tells the same story. In the jungle or on the desert, in training camp or at lonely station, the big event is the arrival of the mail from home. "Write oftener," they say. "You don't know what your letters mean."

Until American homes are safe again, the war plants of Crosley will make nothing that isn't used by the fighting men of America who are winning this war. Converted to war material early in 1942, the eight Crosley plants were delivering early in 1943 a rate of production *four times greater* than the Crosley peace-

High-sounding phrases about the objectives of this war are sometimes hard for a fighting man to nail down in his mind. But one thing he knows is that he is fighting for the HOME he left. He knows what the gangster-nations do to homes they over-run. It's not going to happen to *his* home!

time peak. And soon it will be *six times greater*.

The pace and demands of War have stimulated the manufacture of new inventions, new materials and new products. Crosley, when Peace comes, will make even finer radios, refrigerators and other electrical appliances for the home; and the Crosley Car for civilian use.

## Let's Live a Little Longer

Continued from page 11

### LIGHTER MOMENTS

with **fresh**  
**Eveready**  
**Batteries**

"It's your wife, sir, she says  
to be sure and wear your  
ear muffs and rubbers."

One of the important uses of "Eveready" "Mini-Max" portable radio batteries by our armed forces is to furnish power for "walkie-talkies" (portable 2-way field radios). Because the armed forces are taking all we can make, there are none available for civilians.

The words "Eveready" and "Mini-Max" are registered trade-marks of National Carbon Company, Inc.

survivors among the retarded group; and at 1,300 days and at 1,400 days. One of the rats lived 1,421 days—141 years!

None of this fitted the popular conception of the superman, the race of Methuselahs we have always dreamed about. These supermen were supposed to be big, husky. McCay's work indicated that such a race would be small, wiry, gnomelike. This preliminary evidence also upset traditional medical notions. Doctors had always assumed that the child which started life with vigorous growth had the best chance for survival.

When McCay published his preliminary results he was swamped with criticism. He had made an accidental selection of long-lived animals, said one group. Other critics contended that the lab accident had killed off the weaker animals—and that the strong survivors naturally lived to greater age. Other doubters contended that by restricting diet, McCay had put a smaller burden on the kidneys of his rats, and that this accounted for their extra life.

Dr. McCay set to work again. This time he was armed with ample funds. The Rockefeller Foundation provided \$60,000 for the second experiment—enough to hire the half-dozen helpers needed with the work.

The second experiment consumed four more years—and bore out every finding of the first. The last of the control group of rats—the ones which ate all they wanted—died at 965 days. Life for the others went on for 1,200, 1,300, 1,400 days. Rats were retarded as long as 1,000 days and resumed growth when given all the food they wanted. In this second experiment, all sorts of variables were introduced after middle age.

#### Little Influence on Longevity

Sedentary people can take heart at one of these findings. Exercise, it developed, had little influence on longevity. Rats were exercised in a revolving barrel. Those which were kept thin by diet lived just as long as ones kept thin by exercise. Fat was the big enemy.

Many dietitians have contended that certain food elements—meat, potatoes, sugar—tend to shorten life. McCay didn't find this so.

This second experiment turned up other odd facts. Insurance statisticians have long noted that women live longer than men. They have attributed it to the fact that men hurry and worry more, but there is no evidence that male rats hurry or worry—and they don't live anywhere like as long as their womenfolk.

Still another interesting point—which ties into human beings. As a rule, we aren't much interested in diet until we reach middle age. But McCay's rats indicate that even then it may not be too late to watch our waistlines. One group of rats which ate all they wanted until middle age, then went on a restricted diet, lived 10 per cent longer than animals allowed a free choice of food.

This four-year stretch of work indicated that life could be prolonged at will. This was a tremendous accomplishment—something which had never been done before. But it didn't explain *why* life was prolonged. That was the purpose of Experiment No. 3—which is still in progress.

McCay started this job with 500 rats. Additional money came from the Rockefeller and Macy foundations. This one was set up on a larger scale than the ones which preceded it. This time there was a

pathologist to help—a man who could autopsy the animals and find why they died. A New York dentist volunteered his services—to analyze the teeth of animals and see what chemical changes were wrought by age.

One of the most significant findings to date was turned up by the pathologist—Doctor John A. Saxton, Jr., of New York. At 500 days, he killed a number of rats from both the normal and the retarded groups. At this age, rats in the normal group were approaching old age and death. Rats in the retarded group were still less than halfway through life.

Over half the "normal" rats had serious diseases of one kind or another—lung infections, tumors or degenerative diseases of the kidneys. Only 10 per cent of the retarded group had these lethal maladies. Somehow the retarding of growth had also retarded serious sickness. This, of course, misses explaining long life by a wide mark.

McCay puts it frankly: "It only moves our whys back one notch."

This third experiment bears out all the findings of the first two. At 900 days—90 years—nearly all the rats in the control group were dead. But only 20 per cent in the restricted group perished.

McCay is carrying out a similar, though more limited, piece of work with dogs. Dogs live too long to give quick results, but preliminary work indicates that they will bear out the rat findings. Retarded animals are as frisky as pups and less prone to disease.

The work is helping shift attention from the very young—where medicine has already done a magnificent job—to the very old. Neither McCay nor anyone else in the field is interested in keeping old people hanging by a thread. But they are all interested in prolonging the fruitful, productive years of middle life.

There are a number of applications of this work in the animal world. The productive life of milk cows, wool sheep and laying chickens might be enormously prolonged by using McCay's methods. At least, everything points in that direction.

So far as human beings are concerned, McCay hasn't developed a magic elixir which will give us a century and a half of life. He has simply indicated that retarded animals live longest and in doing so he has provided a method of getting

at the problem of old age. He has shown how to prolong life. The next step is to find why it works. Then we will be at the root of the big secret. Meanwhile, none of us are going to retard the growth of our children—even if it would insure tremendous age. McCay sums up his own advice in a few words: "First, what you should—then what you *don't*. But don't eat too much."

Exact advice for the average person is almost impossible. Food requirements for human beings vary too much. Thus, an inmate in an old ladies' home might subsist on 1,000 calories a day. An office worker might need 2,500, a bricklayer 3,500, a lumberjack 6,000. Mineral and vitamin requirements are so difficult. A quart of milk, two eggs and a slice of meat will satisfy most of our mineral needs. Our vitamin needs are well outlined: 4,000 units a day of A, 600 of C, 333 of B<sub>1</sub>, etc. It all adds up to this: Get all the essential minerals and vitamins, but go shy on calories.

#### Practices What He Preaches

Doctor McCay practices what he preaches. He eats lightly and thin. Overeating is criminal. He holds his weight rigidly at 140 pounds. What this accounts for his energy is a moot point, but he has enough energy for two or three average men. He is realistic about his project.

"No one with ambition can do the type of work," he says. "Results come too slowly. You can spend a lifetime on it, then find that you are barely getting started."

This attitude may be a little gloomy. In the space of twelve years, he has provided a jumping-off place for solving the biggest medical problem facing the world today—the staggering problem of old age.

McCay's favorite story about old age doesn't, incidentally, concern rats. It's an old one, but it may have missed you. It's the one about the man being interviewed by reporters on his 90th birthday. He attributes his great age to the fact that he has never tasted liquor. At this point there is a rumpus in the adjoining room. "What's that?" the reporter asks.

"Dad," says the old man. "Drum again."

## A BELLYFUL OF HELL FOR HITLER

JEEPS FROM WILLYS-OVERLAND

THE SUN  
NEVER SETS  
ON THE  
FIGHTING JEEP

YES, SIR!—a bellyful of misery and hell—the kind that American and British fighting men in North Africa—and Russian fighting men from Moscow to the Caucasus, mounted in tough Jeeps built by Willys-Overland, are dealing out to a badly addled Hitler and his deluded gang.

Wherever Allied fighting forces are pushing their head today, the amazing Jeep, fighting Hell Cat from America, is doing a job. With its speed and

agility—its ability to drive through deep, gooey mud, and tenacious sand, or to swoop up stiff hills and dunes—it is taking Allied fighting men and fighting materials to points of vantage that no other four-wheeled automotive fighting machine of this war could reach.

Born of American engineering and manufacturing ingenuity, the U. S. Army Jeep, with its world-renowned Willys Go-Devil Engine, is the

most beloved chunk of speed, power and rugged endurance supplied to any motorized army unit in the world today. Willys-Overland's civilian engineers assisted the U. S. Quartermaster Corps in designing and perfecting the Jeep adopted by the U. S. Army. The amazing world-renowned "Go-Devil" engine that drives it with such power, speed and flexibility, is an exclusive Willys-Overland development. Willys-Overland Motors, Inc.

# 100 OCTANE GASOLINE

## A Statement to the American People about their New Super Aviation Fuel...World's Finest!

- ... — 100 Octane Gasoline, the new super fuel to fly super planes, can be made by several methods.
- ... — There is only *one* method by which it can be made in the tremendous quantities needed by the United States and United Nations today.
- ... — That method is Catalytic Cracking, which makes in quantity a much higher quality fuel—i.e. more power—greater maneuverability and greater load-carrying capacity for planes.
- ... — Socony-Vacuum was the first to recognize the possibilities of Catalytic Cracking—we brought to this country Eugene Houdry, the inventor of the Houdry Process, and worked with him in developing and perfecting Catalytic Cracking.
- ... — Socony-Vacuum was the *first company in the world to produce 100 Octane Gasoline in commercial quantities by the use of the Catalytic Cracking Process.*
- ... — Socony-Vacuum has produced more Catalytic Cracked base stock for 100 Octane Gasoline than any other company.

- ... — Thus, America when the war began had available the world's finest aviation gasoline—and methods and equipment to produce it in quantities for the world's mightiest air fleets.
- ... — Today through Socony-Vacuum's New Thermoform Continuous Catalytic Cracking Process—a further development—we are enabling America to increase the quantity and quality of 100 Octane Gasoline.

### What this will mean to you — tomorrow!

America can expect lighter, faster, more efficient engines for the peace-time "air flivvers" and dream cars to come.

40 to 50 miles per gallon of "gas" is no longer just "visionary"!

The "100-octane-plus" gasolines already being developed will take the wraps off inventors and designers—make possible more powerful, higher-compression engines of all types.

Working constantly to improve petroleum products for War and for Peace—is Socony-Vacuum's pledge of Friendly Service to America.

## Double, Double, Toil and Trouble

Continued from page 17

toned up, well suited to a visit to a great and serious opera.

In the lobby of the National Theater he caught sight—and it gave him a little shock—of Adolf Hitler. The Fuehrer was dressed very much like himself. In the midst of the busy tumult of the arriving audience he did not see Oscar at first. But Oscar gathered together all his strength; with his whole will he wished, he commanded, that the Leader should see him. And behold—the Fuehrer turned his glance upon him, reflected for a fraction of a second, recognized him, came toward him, took his hand, pressed firmly and said significantly: "How are you, Party Comrade Lautensack? You have troubles, it seems. We all have them. Yes, the times are difficult. That's why the will that arises from them must be all the stronger."

A wave of sympathy, of closeness, passed from Oscar to Adolf Hitler. Clearly he had reread the book *Mein Kampf*; his own spirit had breathed at it from its pages, and now he was finding out that the Fuehrer spoke exactly the way he wrote. They were bound together, they were one, these two men.

More powerfully than ever today the music moved Oscar. The sharp contrast of the Venusberg with its voluptuous, pouring excitement and the Wartburg with its sacred harps and songs—that was his own problem. He himself was Tannhäuser, and the shrill, sensuous quivering of the violins, the wild bacchanale of the Venusberg, bathed in red and blue lights that was Trettnow's Berlin, it was the shirt fronts, the naked, pearl-beked flesh of the women. And the sweet, innocent pipe of the shepherd boy, Wolfram's warning, and Elizabeth's heavenly love—that was pure telepathy, Hravliczek's serious science, Tirschensch's maternally severe affection.

The opera was over; the wild and the red sounds died away. After this powerful inner disturbance Oscar felt an appetite; he was as hungry as a wolf. He made his way to the small Italian restaurant, hoping perhaps to see the Fuehrer there once more. And actually, the waiter too had felt moved to go to the restaurant, and for a second time that evening he gave the clairvoyant a significant nod.

After Oscar had satisfied his hunger he could not go home; he was too full

of the exciting music. Unexpectedly there arose in him the memory of certain women whom he had neglected badly for some time; above all he was moved by the image of Alma, the little seamstress, and her plump good looks. In spite of the late hour he telephoned her, and after some resistance she said he might come.

He came in his festive frock coat. She was amused and at the same time impressed, and the evening turned out well.

THE next morning the telephone broke shrilly into his sleep. He answered in a bad humor. Hannsjörg was on the line. "Trettnow's here," he announced. "She wants to see you as soon as possible. She's staying at the Four Seasons. She's waiting for you to call."

A sweet shock ran through Oscar. Now fate was rewarding him for following his inner voice. Now the reward was here in the person of Hildegard von Trettnow.

"She's waiting for you to call her." Careful now. He mustn't make a false step so near the goal. From the beginning of their relationship he must show this fine lady who was the master.

"Don't you hear me?" Hannsjörg was asking on the other end of the line. "She's waiting for you to call her."

"Then she can wait a long time," replied Oscar. "If the lady wants something of me, she can be kind enough to come to me."

There was a short pause. Then the high voice at the other end of the line swore at him: "You idiot, you dumb ox, you frightful ass!" It was just the way the ten-year-old Hans used to swear when his older brother had got him into a hopeless position and then left him there.

Oscar hung up. And two minutes later Hannsjörg was on the line again. Almost pleadingly he remonstrated: "You can't expect a lady like Frau von Trettnow to chase after you into your hole in Rumfordstrasse."

"I do expect it," said Oscar. "Perhaps, instead of cursing at me like a truck driver, you might consider my motives. If your Trettnow doesn't value me so highly that she'll take the trouble to come to me, then the whole idea just doesn't pay. Then I'll stay in Munich and sign the contract with Hravliczek. By the way, Tannhäuser was very good last night. Thank you for the ticket." And he hung

up again. The choruses of the day before rang within him: "Hallelujah, hallelujah!" Of course, after she had traveled from Berlin to Munich, Trettnow would make the little trip from the Four Seasons to Rumfordstrasse—there was no doubt about it. Oscar stretched voluptuously in his bed, turned on his side, and fell contentedly asleep again.

In the afternoon Hannsjörg rang up. "She's coming," he informed him, rather brusquely, obviously because he, Oscar, had been right again. But in Oscar's soul the brasses from the festival scene in Tannhäuser blew their fanfares.

So the next morning, shortly after eleven, accompanied by Hannsjörg, Hildegard, Baroness von Trettnow, actually fluttered into Oscar's modest room at 66 Rumfordstrasse. On one wall hung the mask, somber and significant. Oscar sat in his armchair; he had hesitated about what he should put on; in the end he had decided on the purple jacket.

Hildegard Trettnow was the way Hannsjörg had described her: well-dressed, elegant, around thirty, handsome, reddish-blond, the features a little sharp, a bold nose, eyes that were quick, pale, hysterical. Both the brothers, as she entered the room, were thinking the same thing: What would our late lamented father have said to this? The Baroness von Trettnow!

WITH cool courtesy, Oscar arose. "I'm delighted to meet you, Master," said Frau von Trettnow in her loud, flat voice. "Hannsjörg has told me so much about you."

Her pale, hysterical eyes went to and fro between the plaque and Oscar's face. "It's a great experience," she said, "to be allowed to compare Oscar Lautensack's portrait with the original. I hope it doesn't disturb you if I look at everything here so brazenly."

"You are my brother's savior," replied Oscar with distant politeness. "You have put me in your debt as well."

"Then you only tolerate me here for your brother's sake?" Frau von Trettnow answered coquettishly; she was obviously expecting some flattery. But Oscar felt it was premature to pay her compliments and escaped into the mystical.

"There is no such thing as chance," he proclaimed. "Everything is a great web; all things are interwoven. Who comes to me does not come by chance."

"I also find," said Frau von Trettnow, trying to lower her harsh voice, "that a sense of fate emanates from you. A person who has once felt the dark, the web-like quality in you, can never free himself again." In place of any answer he contented himself with assuming his Roman look. "I understand," the baroness went on, "that in every detail of existence you seek the link to the cosmos. After what Hannsjörg told me about you I was able to form an idea of your world concept. I've also been prepared for it through the ideology of the National Socialist Party. In your presence I have the same feeling as in the presence of the Fuehrer." She was silent; her eyes went reverently to and fro between him and the plaque.

Oscar too was silent, but he looked the baroness full in the face.

The baroness, insecure, titillated by his gaze, wriggled her hips. Oscar said at last: "To be effective I need readiness on the other person's part."

"There's no lack of readiness," said Trettnow with animation, "on my part. From the first moment I saw your portrait that readiness was there." In short,

## Would you like to own this sailboat?

Imagine the fun of racing along in a spanking breeze with a gay, light-hearted crew aboard! Just remember this, in an Axis-dominated world, you wouldn't be allowed to own a sailboat, a rowboat or a canoe. You couldn't even call your soul your own. So trim sail now and buy all the War Bonds and Stamps you can. It's the quickest way we know for every one to help lick the Axis. And, incidentally, if you buy lots of them now, you may have enough to cash in after the war and buy yourself a sailboat just like the one that's shown above. This advertisement contributed by the makers of Sani-Flush and Mel'o.

DOG MEDICINES**

everything went off according to plan, and when at the end Trettnow asked shyly and coquettishly whether she might see Oscar again, he was able, without compromising his dignity, to assent, with a deep look.

That same afternoon Hannsjörg visited Oscar, praised his brother for having done his part well, and gave him directions as to how he should proceed further in regard to the contract for Alois Pranner. "You must get Trettnow to the point," he instructed Oscar, "where she begins talking to you about hard cash. When you've got her there, then, of course, you don't understand anything about such business matters; you refuse proudly and refer her to me. The most important point is that *she* should start talking about money, not you."

TWO days later Oscar was eating dinner with Frau von Trettnow in the dining room of the Four Seasons. Between soup and Danubian trout the baroness spoke about the kinship of Oscar Lautensack's world concept with Adolf Hitler's. Between the fish course and the *tournedos à la Rossini* she spoke about the mission which awaited Oscar in Berlin. Between the meat course and the *soufflé surprise*, she spoke about the difficult times which demanded that Oscar should descend from his ivory tower and let the common people hear his voice, and of the example of the Fuehrer, who had given up his vocation as a painter in order to save Germany. With the fruit and cheese, Oscar declared that the exhortation to take up the cause of the German people had never sounded so forceful and urgent as from the baroness' lips, and heedless of the other guests and the waiters, he looked her up and down, with piercing, very male glances.

Coffee was served in the baroness' drawing room. Now the hour had come. Oscar fixed his fierce, dark blue eyes on her face; he concentrated his gaze on the bridge of her nose. Violently, rallying his forces to the utmost, he gave her the inner command: "Start talking about hard cash, you goose."

She understood and obeyed. "I understand, Master," she said, "that if you decide to move to Berlin you will have to leave much behind you. Surely that will also involve material difficulties. Would you permit me to lend a hand? I should be overjoyed."

"Hallelujah!" the pilgrims rejoiced within Oscar. "She's hooked," the brasses from the festival scene trumpeted in his soul. But aloud, somberly and sternly, he said: "I don't bother about those externals. There is only one law for me: my inner voice."

"I know," said the baroness, put to shame and covered with maidenly blushes. "I shouldn't have brought up the subject in your presence. I'll talk it over with Hannsjörg."

The blushes were not unbecoming to her; Oscar looked upon her with gracious eyes. "It is doubtless no accident," he said dreamily, "that the Party has called me through you in particular. For us Germans the ideal still remains a feminine one. The eternally feminine attracts us." She sat there happily. He knew that he would only have to touch her at that moment and she would dissolve; he even felt a desire to do it. However, that would have been unwise. He contented himself with giving her a long, full look while pressing her hand in farewell. Then he went to Alma.

Two days later Hannsjörg informed him that all was going according to plan: the contract for Alois Pranner was ready.

Oscar felt for the bell in the dark, rang it. His servant Ali came in, a personable young Arab in the costume of his people; here in Berlin, Oscar had begun to surround himself with persons and objects

that attracted attention. Ali pulled back the curtains and rolled the breakfast table up to Oscar's bed.

A pale New Year's Day sun revealed the gorgeousness of the heavy, rich-hued furniture. While Oscar toyed with his breakfast, he feasted his eyes on the magnificence he had amassed. He had come a long way in the few months of his life in Berlin. He could enter this new year of 1932 with satisfaction.

Half past eleven. As a matter of fact still rather early, for he had not come home from the New Year's Eve party at Frau von Trettnow's until five o'clock. Everything there had been as he had longingly imagined it in Munich; gentlemen in white shirt fronts, ladies in deep décolletés had crowded around him, paid homage to him. He had made the grade; he was on top again.

He had himself massaged, took a shower. He felt in good shape physically too. Success agreed with him, and the violent Berlin life made him young. He put on his luxurious purple dressing gown, surveyed himself in the mirror; the dressing gown looked well with his Roman head.

He went over into the library, sat down at the huge desk, and gazed with approval at the pile of mail which lay arranged before him. He tipped over the pile and rummaged around in it like a child, smiling absent-mindedly. There were many who sent him their good wishes; he had won himself followers; the world knew now who Oscar Lautensack was.

There was a knock at the door. His secretary came in: Herr Friedrich Petermann. Herr Petermann never walked in, he always stole, slipped, smuggled himself in. Oscar called him a desiccated sneak and could not stand him. He was annoyed at Hannsjörg for browbeating him into hiring just this particular secretary; now he could not get rid of him; he knew too much. In his secret heart Oscar guessed that his brother was having Petermann spy on him.

OSCAR kept his secretary only a short time. But his cheerfulness had vanished. His heavy mail no longer gave him pleasure. He shoved the letters aside and did some telephoning, to exchange New Year's greetings with his friends. They were people with resounding names and titles. His worthy father would have stared.

In between, however, he also called up little Alma, the seamstress, to wish her luck; for Oscar Lautensack did not do things in a small way and he had generously taken Alma along with him to Berlin and set her up in business here.

But after this conversation he returned to the bigwigs. He rang up Councilor Maedeler, then Count Zinsdorff. He was a young man with a beautiful, insolent, vicious face and magnificently casual manners; Oscar was proud of his friendship.

But today's conversation with Ulrich Zinsdorff did not make Oscar happy. Zinsdorff mentioned in passing that he had spent New Year's Eve at the chief of staff's, at Manfred Proell's. They had told some good, smutty stories, but there had been serious political talk as well, and the Fuehrer himself had appeared; toward morning there had been a showing of the most colossal, filthy movie—in short, the year 1932 had got off to a most promising start. It was too bad Oscar hadn't been there.

Yes, too bad. More than too bad. Oscar's mood was at once upset. He felt bitter. He would have liked to meet the Fuehrer. For great as had been the successes which that autumn and winter had brought him, his ultimate dream—direct co-operation with the Fuehrer—had not been fulfilled. Hannsjörg considered it too early to bring him together with Hit-

ler; he had always had new excuses keeping him away from the New Year party at Manfred Proell's.

Oscar gazed mechanically at the ring on his finger. It was one of Trettnow's presents, a handsome seal ring. But a matter of fact he had imagined something different for his large white hand. At Posner the jeweler's, on Unter den Linden, he had been shown a valuable diamond ring. Men no longer wore seal rings, but he didn't let fashion determine his tastes. Soon, as soon as he had money, he was going to buy that diamond ring.

No, he hadn't quite yet reached his goal. It wasn't just the ring; there was also a certain wall in the library. For a time being, a large painting hung there, a huge pretentious canvas, executed by an artist of the Pilot school and portraying the astrologer Seni at the bier of Wallenstein.

But no one knew better than Oscar that this was only a weak substitute. The right decoration for the wall was a tapestry he had seen in the Bernheim Galleries in Munich; that tapestry was definitely and genuinely an old Flemish original, and it depicted the laboratory of an alchemist. Only unfortunately it was outrageously expensive. But wait—soon he would also be able to

## The Stag at Eve

When Little Tarzan eats his beans  
And other unattractive greens,  
I give the model child a cake  
As a reward, for goodness' sake.

But when he buttons up his trap  
And won't devour a single scrap  
Of foliage, do I then deny  
The stubborn apple of my eye  
A sweet, and let him starve? I do—  
Like fun! Instead, I give him two.

Thus do I keep the toothsome brat  
Luxuriously pink and fat.  
And if my views are in collision  
With those held by our pediatrician,  
If he condemns my soft technique  
As reprehensible and weak,  
I'd like to have him come to dinner  
And try to feed the little sinner.

MARGARET FISHBACK

place the astrologer Seni with the alchemist's laboratory.

Oscar felt something disturbing. Somebody must be close by. Peevishly, a haughty word on his lips, he went to the library.

Hannsjörg was there. An impudent smile covering his whole pointed, pale face, he came to meet Oscar. "Happy New Year, old top," he said. "I felt ought to bring my good wishes myself. How was it at little Hilde's? We had a marvelous time at Manfred's." So Oscar even dared to remind him of the evening with the Fuehrer, from which he had excluded him.

Oscar assumed his Roman expression. "You dirty stinker," he said with conviction.

"You mean because the Fuehrer was there?" replied Hannsjörg comfortably lighting a cigarette; he looked slightly pitiful, sitting in the much too large armchair. "Was it such an awful imposition," he inquired with sympathy, "that you had to spend the evening at little Hilde's? Did she keep you there overnight?"

But when Oscar did not enter into the spirit Hannsjörg felt it was time to bring up the subject about which he had cornered his New Year's present. "I've got a st-

# Casablanca

It's more than a town in Africa....

AND MORE THAN A WARNER BROS. PICTURE.

On November 10th Casablanca was a word in a geography book. On November 11th it became a place that will go down in history.

And scarcely a week later "Casablanca" was the Warner Bros. Picture the 'New York Times' hailed as one of the Year's Ten Best.

On the battle-line, and in back of it, there is an *American* way of doing things that is traditional with Warner Bros. This tradition goes back to another war when we presented a motion picture called, *My Four Years in Germany*.

Long before the recent invasion, the powder-keg that was Casablanca hid a story restless for screen telling. In any day this would be grand entertainment for its sheer excitement alone.

But in these times, with our entire picture-making effort keyed to morale building, "Casablanca" offers another example of the war-time policy of our company.

Our "Yankee Doodle Dandy" is putting song and spirit into America's heart. And with "Air Force" telling of a fighting America in action, we of Warner Bros. are happy to offer these productions as symbols of the American way of living to those who battle here and abroad for the good way of life.

gestion for you that will give you pleasure," he informed his brother. "We're going to found a magazine, you and I. The Society for the Dissemination of German World Philosophy will publish it. It's going to be called Germany's Star. It's to deal with those sciences which are beyond the reach of arid intellectualism—with racial studies and occultism. The budget for it has been approved. As a member of the executive committee of the German World Philosophy I officially invite you, Oscar Lautensack, to assume the duties of editor. I'll be glad to help you to the best of my abilities. You know, as the former publisher of Lightning, I have experience."

The casual, ironical manner in which Hannsjörg clothed his announcement, and the reference to the blackmailing paper which had brought Hannsjörg money and trouble, did not prevent Oscar from recognizing what a great favor his brother was again doing him. A magazine was a valuable present in the times in which they were living. "Germany's Star," he said critically, "it doesn't sound bad."

"It can rise in a fortnight—can Germany's Star," Hannsjörg announced cheerfully and resolutely. "So roll up your sleeves, my boy. See to it that you turn out a good article for the first number." He noticed with satisfaction how stimulated Oscar was. He left.

Oscar remained behind, his face working. Ali, the servant, announced that dinner was ready, but Oscar waved him aside, sunk in meditation. He went up and down his rows of books; his purple dressing gown billowed gorgeously, trailing behind him.

Oscar, almost mechanically, reached for a book with a sober, bluish-gray paper cover, a thick volume which exuded science and boredom. Thomas Hrvliczek, Handbook of Metapsychology, it said on the outside. As Oscar took the book in his hands it opened of itself at the pages describing the telepathic experiments the professor had made with him.

Full of enthusiasm Oscar reflected how he would write his articles for Germany's Star. If he was in good form, he would produce something great.

There was just one little difficulty. The manual work, the mechanical act of writing, hindered his spontaneity of expression. But neither could he dictate those essays, those panegyrics which he intended to write, to a person like Petermann, for example, the desiccated sneak. No, he'd simply have to look around, and find himself somebody who suited him. He'd go to some stenographer or other, incognito, a Harun-al-Rashid, and when he found the right face he'd make the girl the tool of his inspiration.

With this decision, Oscar concluded his hour of meditation. He rang for the servant and ate his dinner.

OSCAR and Alois were driving out Ahornallee to Frau von Trettnow's. Oscar's expression was concentrated; he was preparing himself.

It was going to be a difficult evening this time. Trettnow hadn't even told him the names of the people before whom he was to perform; he himself had wished it so to prove his good faith. He knew only that they were people of influence. And then, to be sure, Alois had been able to find out a good deal about the members of the gathering when, as usual, he had made the routine arrangements for the performance at Trettnow's house. Now, in the car, Oscar was checking up on his memory, which Alois confirmed or supplemented.

Finally they arrived at Frau von Trettnow's house, and at once Alois became the most polite, the most assiduous of

helpers, playing the part of Oscar Lautensack's admiring associate.

About sixteen to twenty people were present, the gentlemen in dinner jacket—the ladies in evening dress. They sat there with faces on which skepticism and irony were mingled with an expectant, somewhat uncomfortable curiosity. Frau von Trettnow reminded them once again that she had not informed the master who would be present, that he knew no names. Then Alois asked them to write down questions which related to the future, to put what they had written in an envelope and to seal the envelope. These firmly sealed envelopes Alois collected in a little basket which he passed to Oscar. All this took place under the brightest illumination.

Oscar mixed the envelopes without opening them, letting them glide through his large white hands. "I ask you to relax, ladies and gentlemen," he said. "It is not necessary for you to think about what you asked me on your slip; but if you do so, you will help me. The essential thing is that you don't put up any resistances to me, that you don't shut yourself off, that—if you should not believe—you put aside your skepticism for the short period of these manifestations. Please understand me rightly: You don't have to believe, but you are not to make the task difficult for me by your disbelief."

HE WENT on letting the envelope glide through his hand, felt them take hold of them more firmly, turned them around in his hands, crumpled them—always without opening them. His large, passionate eyes assumed a dreamy, absent expression. He breathed slowly, loudly. He leaned his head back, closing his eyes.

He picked out one of the envelopes, turned it over, crumpled it up. "This envelope," he said slowly, groping for words, "comes from a tall, blond lady I see her as she is today, and I see her three years from today." Unexpectedly he opened his eyes, searched among the listeners. "The envelope belongs to you, madame," he said, and pointed his large forefinger at the woman whom he had recognized from Alois' description. "I have seen you. I see you." He closed his eyes again, and from now on he spoke in a strangely drawling, sleepy voice often inserting pauses. "I see a city," he announced. "It is a southern city. The signs are in Italian. It is not an interesting city. I can't see anything remarkable about it. You are in a hotel. It is a small shabby hotel. Why is a lady like you staying in such a shabby hotel? And what business can you have in such an uninteresting city? Now a child is coming into the room. A boy. It is a lively boy. He is about nine or ten years old. He is very lively. He asks you something. You wave him away. He doesn't give in. I must say, madame, he's really not a well-brought-up boy. Incidentally, you fear for the boy. There is real fear in your eyes. Now you are going out. You go for a drive. And all the time you are afraid. You look around to see if somebody is not behind you." Again he opened his eyes suddenly and fixed the pretty blonde with his gaze. "Can you make anything of what I have seen?" he asked. "Does it make sense to you? Am I right?"

The blonde, excited, said in an uncertain, constrained voice: "Yes, it might be. A lot of unfair things happen in this world."

Until now Oscar had been nervous. Now that the first attempt had gone off so well, he became the more confident. He had at once spotted Herr Tischler from Alois' description. He knew how

handle people of that type; they were a game; they were to be treated with confidence, with "superiority." A grim, dark fit of mischief overcame Oscar. He wasn't going to stand up before these bawds and play the clown any more; he was not going to supply these people with amusement; they were going to supply him with amusement.

He picked up a new envelope, felt it "saw." "Now," he announced, "I saw a man of about fifty, with a grayish-brown complexion. His name might begin with a D, or perhaps with a T. I have a feeling that this man's health is not very sound. He has stomach trouble." He opened his eyes, and again picking up his man with his large forefinger, he said: "It is you."

HERR TISCHLER, his gray face even more colorless than before, admitted with a weak attempt at humor: "I take sodium bicarbonate from time to time, that's true."

The others smiled uneasily. Oscar's expression remained unchanged. "You asked about your future," he went on. "I have an answer for you. But it is not a pleasant answer, and I don't know whether it can be of any use to you to learn what it is. Do you want to know?" His passionate, dark blue eyes held the gaze of the man, who tried to evade him.

"What importance can it have?" Herr Tischler answered in his hoarse, rather unpleasant voice. "Or do you think, Herr Tensack," he went on challengingly, "that what you are going to tell me now will change my mode of life?"

"Perhaps," Oscar replied calmly. "Perhaps not. That depends on your powers of judgment, Herr D or T."

"Well come on, produce your wisdom," Herr Tischler said impatiently. Oscar leaned back his head, closing his eyes. "Now I see across the years," he prophesied. "I see across ten years. It is ten years from today. I see something like a forest. Stones here and there. They are gravestones. Ah—it is Woodland Cemetery. I see a certain stone. Not a very showy one. The inscription is simple too. The letters blur before me, but I can read them vaguely. The inscription is 'Anton Tiehler' or something like that." And after a malicious little pause he added: "The stone is already pretty well weathered." He opened his eyes again. "I regret that I have nothing more pleasant to report to you, Herr Tiehler, but I warned you."

The others were breathing uncomfortably. Herr Tischler, paler and grayer than ever, declared with forced joviality: "All nonsense of course. I'll never have myself buried in Berlin. I wouldn't think of it."

But Oscar, with accomplished politeness, answered: "Perhaps that doesn't depend entirely on you, sir. I can only express what comes to me from powers which are stronger than you and I."

With satisfaction he noticed that his malicious prophecy had made an impression on the gathering. He picked out his next subject. The big, heavy, blond gentleman with the plump-cheeked, rosy face was obviously Dr. Kadereit, the big industrialist. He scrutinized the man's face, sleepy eyes. This fellow wouldn't be exactly easy. Dr. Kadereit was the most important person in this gathering; Gunnbjörg had impressed that on him emphatically.

He made no lengthy, mystical preparations, but came straight to grips with the man. He shut his eyes only for a short moment, then declared: "This slip comes from you, Herr Dr. Kadereit." He inclined his head and explained politely: "By the way, I knew you were Herr Dr.

Kadereit from newspaper pictures. However, what I am about to tell you," he went on, "springs from other sources."

"Please go on," Dr. Kadereit said amiably; the portly rather clumsy man had an oddly light, weak voice.

Oscar did not go into a trance, but sank his gaze, fully awake, into the other's eyes, into those sly, veiled eyes. He kept his voice also on an everyday level; only he spoke slowly so as not to let slip an unconsidered word. "I see you," he said, "in the company of gentlemen in uniform. I see you conducting these gentlemen through large, bright rooms. I see machines. It seems to be a factory. Am I right?"

"It's not improbable," said a sharp, mocking little voice, belonging to a small, graceful woman, obviously Dr. Kadereit's wife. "It's not improbable that a manufacturer should be found in a factory." There was a ripple of laughter.

"Please do not disturb the master," Alois requested politely but severely.

The little lady was dangerous, Oscar felt. He wouldn't get by here with his scant information about Kadereit. If he wanted to regain command of his audience he would have to make a greater effort, use his true power, his intuition, his perception. He would have to gamble on that. If a current went out from him to this Kadereit fellow, he would have won; if not, well then he would have lost the gamble.

He closed his eyes, withdrew into himself. It worked—it was coming! He felt that faint, fine tearing, as when one tears a silken material. Slowly he opened his eyes. But to his astonishment the current did not go from him to Dr. Kadereit, but to the woman beside him, to that very lady who had disturbed him with her impudent words.

He knew nothing about this woman; with her, whether he would or not, he was completely dependent on his perception. His gaze fastened on her face, a pale-brown, bold, boyish face with bright, gray eyes. He would not release those eyes, and although Ilse Kadereit looked at him proudly and mockingly, yet she felt that something strange was seizing control of her and forcing her against her will to surrender her most intimate thoughts.

OSCAR'S face had become empty, his red lips had parted a little, and again his lids half concealed his eyes. "I have no message for Herr Dr. Kadereit," he said, "but instead I speak now to you, madame." His voice drawled, drew the words out, sounded sleepy: "About the future I have nothing to prophesy to you, but I can give you more exact information about your wishes and thoughts than you have yourself."

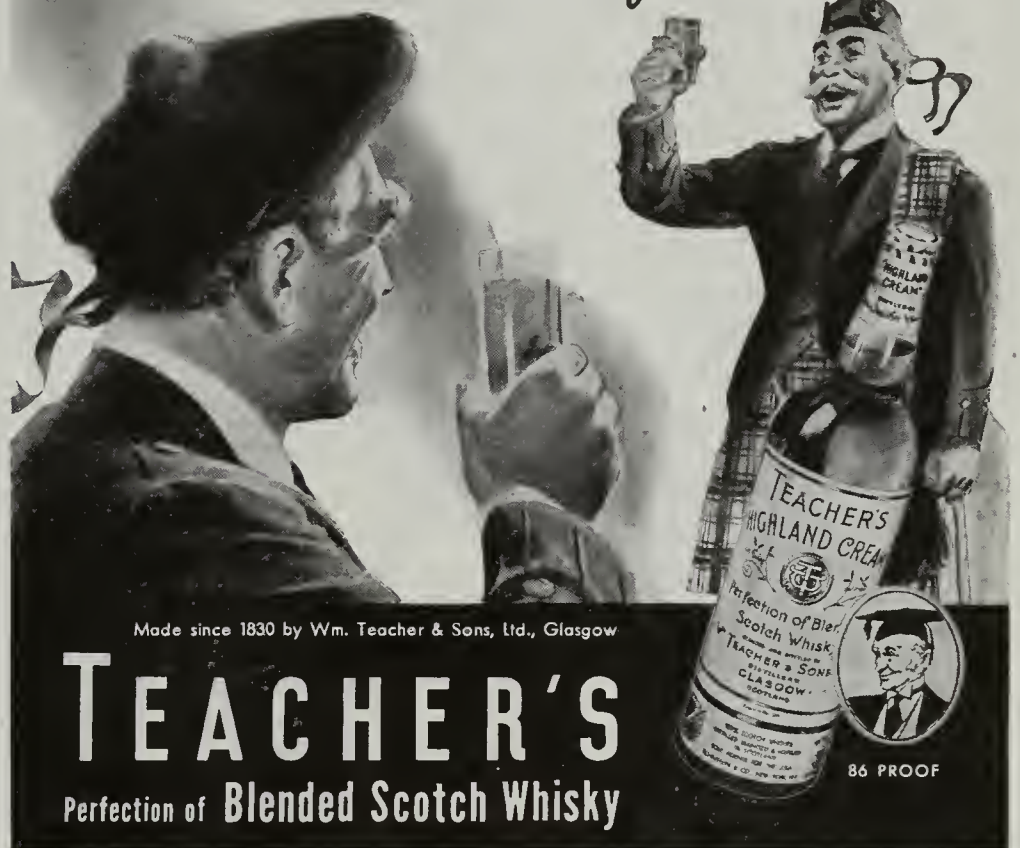

"I'm waiting," said Ilse Kadereit, but she did not quite succeed in maintaining her pretty, mocking tone.

Over in his corner Alois stood in suspense, in readiness. What Oscar was doing was daring; it was the technique of suggestion, a method made up of hypnotism and telepathy mixed; only the true telepathist could permit himself this. "You think," Oscar began now, always in the same, groping tone of voice, "that your husband should finally ally himself and his interests with the Party. You don't want this for any great or small advantage, but simply because you think it amusing. Do you remember when this wish first became clear and definite to you? Yes, you remember. And I remember with you. Please imagine exactly the way it was." He gazed before him, listened to what sounded in him, in her. "Thank you," he said and smiled, "thank you, now you're really making an effort. Your memory is becoming clear. Now I

**Cushman**  
is speeding the  
VICTORY PROGRAM

Despite more than 800% increase in production the last 2 years, Cushman's capacity is taxed by Army, Navy, Air Forces and the great defense plants—to speed up the war effort. And what a job these Cushmans are doing—saving countless steps . . . priceless time! Ten times as fast as walking—up to 35 miles per hour! Cheapest transportation—100 miles per gallon! Most convenient—stop and park anywhere! Earning their service stripes by carrying officers and key men for inspection and check-up of bases, camps, forts and defense plants—delivering orders, mail, prints, repairs, supplies, parts.

Cushman has extended its research work to perfect an even better machine—sturdier, more reliable, more comfortable—to meet severe war needs. So, though unavailable today without high priority, you are assured an even better Cushman—a still greater value—when you can get it!

Your present Cushman must serve you for the duration—so lubricate and service it regularly. Follow your instruction book religiously. For a new copy, see your Cushman dealer, or write us.

CUSHMAN MOTOR WORKS, Dept. C-3, Lincoln, Nebr.

can see well. You are in a room with a lot of greenery. Is it a hothouse? It's something like a conservatory. With you is a youngish man. He has black hair. He has a marked part in his hair. You are looking at a basin of plants with him. Yes, they are water plants. Am I right?"

"It might be," Ilse Kadereit answered hesitantly. And Dr. Kadereit, benevolently interested but more unbelieving than believing, asked smiling, in an undertone: "Does he mean Stockmann perhaps? Didn't you tell me that you had a conversation with Stockmann about the Party two or three weeks ago?"

"The man with the part," Oscar went on, "is speaking derogatorily about the Nazis. Am I right?" And without waiting for her answer he continued: "You, perhaps just in a spirit of contradiction, defend the Party. In your thoughts more vehemently than with words. 'Actually,' you think, 'those fellows with their bad manners are ten times more interesting than all of you put together,' and you think something very coarse about the class to which the gentleman with the part belongs, a vulgar word of the kind a lady rarely uses."

Dr. Kadereit laughed. "Is it right?" he asked half-whispering in his high, thin voice, and answered himself: "It could be right: you could have thought something of that sort about Stockmann."

Oscar, however, declared decidedly: "That was the moment you first wished that your Fritz would ally himself with the others, not with these." He opened his eyes fully, and said, no longer sleepily but in his everyday voice, very triumphantly: "I don't ask you if I'm right. I am right." Alois was full of professional admiration for his colleague.

Dr. Kadereit pretended to clap. "Not bad," he said, "not at all bad," and with a little smile he looked at his wife who was sitting there also smiling slightly, but with a preoccupied expression, running her tongue along her teeth. Oscar passed his hand over his forehead. "Now I'd like to let that be enough for today," he declared amiably, almost apologetically; the effort of concentration had taken a lot out of him, he explained. With that he left the platform.

ILSE KADEREIT was a skeptical woman and did not let herself be easily impressed. Now that Oscar had released her she felt a resistance to him. It wasn't a pleasant thought that somebody could look right into one like that, that he could, so to say, undress one spiritually: it was an uncomfortable feeling. But it was exciting too; she was not sorry she had come.

The others also were impressed and eyed Oscar with inquisitive awe. "Did I promise you too much?" asked Frau von Trettnow proudly. "Isn't our Oscar Lautensack really a master and prophet?" And, "Amazing," the guests admitted. "Really extraordinary," they said, and, "Did you really think that about Stockmann, my dear?" they asked Ilse Kadereit. But Ilse gave evasive answers. "Possibly," she replied, and with her sharp young girl's voice she added: "To tell you the truth, I don't know."

Lean Herr Tischler approached Oscar awkwardly. He poked him lightly in the ribs, and said with a forced laugh. "You're a great joker, Master. What you did with me just now, that was just a macabre joke of course, wasn't it?" Oscar only shrugged his shoulders. "But it's really astonishing," Herr Tischler went on, "how many things you did hit. The way you guessed little Kadereit's thoughts—that was simply perfect. And one could read in her face that it was right. I'd like to have a longer talk with you sometime. Herr Lautensack," he said in a confidential tone. "I'd like to get your advice on a few matters."

"Ask my secretary," said Oscar ungraciously.

Alois, however, when Herr Tischler applied to him, said surlily: "You'll just have to take the trouble to apply at the office of the German World Philosophy."

Meanwhile Ilse Kadereit had spoken to Oscar. She stood, a dainty little figure beside her uncouth husband. "You did that cleverly, Master," she said, "very effectively." Her little voice did not sound sharp now, but birdlike, and her gray eyes sparkled brightly and intelligently beneath her dark hair; she was very pretty. Oscar was indignant at her impudence, but he couldn't help finding her attractive. Everything about her appealed to him: her delicate yet firm figure, her bold, pale-brown boy's face with the short black hair, the cleanly chiseled chin, and the pretty, determined nose. She could go on mocking at him. In the end he'd get the better of her; he'd already got the better of her, he felt it.

As he drove home with Alois, Oscar felt very much stimulated. One just had to formulate a question adroitly and push it right in people's faces. One just had to declare with the requisite certainty that they had thought or experienced something, and they believed it themselves.

Alois leaned back sullenly in his corner. "Whom are you telling all this?" he growled. "Me? You know that it all comes from me—all your wisdom." He yawned. "It's a rotten life here in Berlin. Monday I'm off to Munich."

KÄTHE SEVERIN was copying the manuscript of Richard Wagner Prototype and Warning. While she typed mechanically, her thoughts were occupied with other things. Obviously with not very pleasant ones. For her beautiful, somewhat haggard face was twisted with vexation; three sharp vertical furrows cut into her broad forehead just above her nose.

"Käthe Severin, Stenographic Work of Every Kind," announced the sign downstairs. But for weeks now it had not attracted any clients. If things went on like this, she would have to close shop.

Tall, blond, and slender, Käthe Severin sat at her typewriter; her thin hands moved over the keys in practiced strokes. Her half-brother Paul had given her the job of copying this thick manuscript. Richard Wagner, but only because he didn't want to have her sitting around completely unoccupied. For he had no need of the copies. The book was one single, acid criticism of the figure of Richard Wagner; he wouldn't find a publisher for that sort of thing nowadays.

It was becoming harder and harder to get along with Paul. There was the question of the Nazis. Of course a whole lot of the Nazi principles were annoying, ridiculous. She herself, when she was together with Nazis, protested against them. Yet when she was with Paul she defended the movement, praised their honest fanaticism, their vigor. The arrogance with which Paul disposed of the Nazi principles simply forced one to contradiction.

Käthe loved her brother. He was amiable, he had an exceptional mind, he had a sense of humor, he was obliging, and when he expounded his ideas, his beautiful enthusiasm carried one away. Yet it was hard to be dependent on him, and unfortunately it was impossible to foresee when that dependence would be at an end.

Käthe inserted a new sheet, page 319. The manuscript had seven hundred and fifty-six pages. Her brother Paul took seven hundred and fifty-six pages to bare the weaknesses of a great man. Just because Wagner's music entered into one so sweetly and poisonously, he maintained, it was dangerous, and it was time to show

other side. Käthe was indignant that Paul should take so much pains to be a great man. Nevertheless, as she wrote she had to smile from time to time at Paul's grace and wit. He could write. The doorbell rang. Käthe answered without haste. She had lost the habit of waiting for clients. What could there be of importance? A traveling salesman.

But it was a client, a gentleman in an ample overcoat, a gentleman with a powerful, imposing face, one who as soon as he entered filled the whole little room. He asked if he might dictate to her. It was a question of an experiment. "But I'm to make the experiment," he said, "when it has to be at once." It all sounded rather imperious and violent.

"Very well, sir," replied Käthe in her crisp voice, her politeness mingled with only a very slight irony. "If you're in such a hurry we can try it right away."

THE stranger looked her up and down. "Yes," he said, "to begin with we shall just have to limit it to a trial. With the type of material I have to dictate, it's of some importance whether—and to what extent—I find a basis of understanding in the person to whom I dictate."

So the new client dictated, while she took shorthand. He paced up and down, now before Käthe, now in back of her. It was not very easy to follow his dictation. One moment he spoke measurably, emphasizing every word, with theatrical deliberation; the next his words rushed out. What he had to say sounded vague and obscure; on the other hand there was music in his sentences and Käthe listened to them with enjoyment.

The stranger described a phenomenon which until then had been foreign to her, and which he called now telepathy, now mind reading, now metapsychology. The concept did not seem to have definite boundaries, and at bottom Käthe was not any the wiser even after the gentleman had dictated for some time. But she felt grandeur behind his obscure sentences which swept away any irreverent criticism.

He dictated in a rich, silky tenor; one felt the sentences forming within him. Now and then he interrupted himself and asked: "Can you follow? Do I speak too fast?" But Käthe was well trained and made a concentrated effort, not wanting to interrupt him.

He dictated in this style for quite some time. Whenever it was possible Käthe's face sought his agitated face. A sense of excitement, of animation, went out from the speaker such as Käthe had rarely felt in the course of any job. While this stranger spoke, grand and measurable feelings arose in her as they did during the Fuehrer's speeches. She

floated on his words as if bathing in the sea. She no longer thought how hopelessly complicated everything was in the world around her; she had the feeling that she was controlled and led by an obscure but not unfriendly power.

He inserted more and more frequent pauses. Now he seemed to be finished. "Enough for today," he said, and: "Why, you look quite disappointed, Fräulein Severin. One can't dictate such things for hours. Surely you in particular can understand that." Without embarrassment, almost shamelessly, he eyed her long, beautiful, narrow face, her curved lips, her brown eyes beneath the full brows, the wide forehead slightly bulging at the base, the thick, dark blond hair with its lovely line, braided into a knot contrary to fashion. It certainly was different working with this girl instead of with Petermann, the desiccated sneak. "You're good to work with," he complimented her. "You don't upset one's mood." He smiled; actually he had a somber face, but when he smiled, it quite lit up.

"Thank you," she said happily.

"Could you really follow while I was dictating?" he went on to ask. "Or does the technical process of writing require your whole attention?"

"I couldn't keep up all the time," Käthe admitted. "But when something takes as much out of a person as the ideas you drew out of yourself, then one makes an effort to listen to them."

"'Drew out of myself'—you hit on a good word for what I do there," he said approvingly. "But please read over to me once more what I 'drew out of myself.'"

SHE read aloud in her crisp voice. To read smoothly from shorthand notes is not very easy, even for an expert. She made a concentrated effort, repeated his sentences fluently and with the correct emphasis, and—remarkably enough—there were only a few hesitations and corrections. "You read that with your soul," he said commendably. Paul would certainly have thought that "with your soul" was a cheap expression; yet she was pleased; she even blushed. And he, eyeing her once again, declared graciously: "I think we'll be working together often." While he put on his expensive, ample overcoat he asked smiling: "As a matter of fact, do you know who I am?" He asked it as if she must know him; and his face did seem familiar to her; surely she had seen it in the papers, but she couldn't think of the name. She had to shake her head, blushing. "All the better, all the better," he said, with slightly forced good humor.

## OUR ROAD TO WAR

**M**ANY a book is hailed by its publishers and one or more critics as the most important book of the year, decade or century. In our opinion, the United States government has recently had the honor of issuing one of the most important books of the last ten years.

The book is *Peace and War*, by the Department of State. (Government Printing Office, Washington, D. C., 1942; 144 pages, 25 cents.)

You've probably heard of this document. It is the story of the United States government's diplomatic deals and discussions all over the world in the decade which began with Japan's attack on Manchuria, September 18, 1931, and ended with Japan's lunge for the backbone of our Pacific fleet at Pearl Harbor, December 7, 1941.

The book makes exciting reading from start to finish. It is a digest of much of the international news you read from day to day during those fateful ten years; and it brings those bits and pieces of news into focus and perspective as it weaves them into a connected story.

What interests us most about the book is the strange dualism of character which our people and our government exhibited throughout those ten years. All along, we did two things: (1) We called repeatedly for world peace and good will, scolded

nations that threatened peace, stuck the national nose into every explosive situation everywhere; yet (2) we neglected to arm ourselves in such a way as to be able to back up our righteous words with action. And other nations were not fooled.

To illustrate, we quote a paragraph from Peace and War on the subject of Ambassador to Japan Joseph C. Grew's December 27, 1934, report to the State Department on the Japanese situation:

The Ambassador said that unless we were prepared to subscribe to the "Pax Japonica" in the Far East, we should rapidly build up our Navy to treaty strength, and when the Washington Naval Treaty expired we should continue, "regardless of cost," to maintain the existing naval ratios with Japan; *that Japan's naval policy had been formulated on a premise that the United States would never build up to treaty strength.* He reported that almost half of the Japanese national budget for 1935-36 was for the army and navy. [Italics ours.]

We hoped to eat our cake and have it too; to be interventionists and isolationists at the same time. The Axis powers clearly perceived this fatuous self-deception of ours. In due time, Japan led off the Axis attempt to snatch the cake which we hadn't eaten. Disaster followed disaster for

the United Nations' arms around the world, until a full eleven months after Pearl Harbor, we were able to mount an offensive in North Africa and score a big sea-air victory over the Japs off Guadalcanal.

We've acted that way more than once, as a nation; have tried to get something without paying for it, or to follow two irreconcilable courses of action or policy at the same time. Some of us are even now toying with the idea that we can furnish the bulk of the weapons with which to beat the Axis, and send only token forces of our own men to fight with those weapons; that others can be depended on to do most of the fighting for us.

It is no use blaming the President or Congress for our pre-Pearl Harbor unpreparedness. They were only reflecting the wishes of the people—though in some respects it must be admitted that the President was a little way ahead of the majority of the people.

If we can learn from this war to be prepared always to meet the full consequences of anything we may say officially to any other nation or nations, we shall learn a priceless lesson, and on which may save the national neck some day.

Anyway, we recommend that you spend 25 cents for this book and read it word for word.

## THE DAY OF GLORY

*Allons, enfants de la patrie—  
Le jour de gloire est arrivé . . .  
—La Marseillaise*

**I**T IS an honor to the Allies, as well as a great help, to have France back in the fight, though for the time being, France's fight is based in North Africa.

Not that the French people—the great majority of them—ever were out of the fight. Mistaken or timid counsels in June, 1940, persuaded against the planned flight of the French government to Africa, to carry on the war from there. Old Marshal Pétain may have been overconfident of his ability to cajole a fair deal for France out of

Hitler. Or he may have made the only possible decision.

France's resurrection began with the Allied smash into North Africa last November 7th. It was the first opportunity. The political squabbles, as Eisenhower and Anderson slugged eastward, and Montgomery slashed westward after Rommel, were only the surface foam on the waters stirred by the freshening air of freedom. When Roosevelt and Churchill met at Casablanca, and it became evident that the Allies were acting in good faith and had the force to back their promises, Giraud and De Gaulle agreed readily enough that the first thing on the calendar was to whip the Germans.

Meanwhile, the French fleet at Toulon had scuttled itself rather than let Hitler take it over—an act which led, as the French sailors knew it would, to the German occupation of all France and a stepping-up of brutal reprisals for the slightest acts of "disloyalty." Meanwhile, too, General Jacques Leclerc and his dauntless Fighting French had set out from Equatorial Africa on their 1,500-mile desert march for Tripoli—a story which we surmise will be retold for generations.

It now seems certain that France is destined to rise again, and in glory. The world will be the richer from the moment that promise comes true.

THEY TELL ME B.F. GOODRICH  
WAS ACTUALLY SELLING TIRES  
MADE WITH SYNTHETIC RUBBER  
8 MONTHS BEFORE THE WAR!

Right you are, Captain! Long before Pearl Harbor we were making tires in which more than half the rubber was Ameripol—our synthetic. They were the first such tires ever offered for sale to the American public. Many car owners bought them. So did leading American companies. They wanted to help get America's synthetic rubber program started. The result was a dramatic nationwide test that proved Ameripol tires at least the equal of tires made with natural rubber. The Bond Bakers, for instance, reported 28,300 miles.

An even more severe test is being made today. Synthetic rubber is doing scores of vital jobs—wherever men fight—in the air, on land or sea. And again it's passing the test—thanks to the "know how" gained before the war. But remember this—all rubber is still precious. Ameripol synthetic rubber is not yet available for civilian tires.

After we've won, your new car may have tires made wholly or partially of synthetic rubber. Look for the ones made by B. F. Goodrich. Why? Because we've had more actual experience making and testing such tires. And because we promise you that "B. F. Goodrich, first in rubber," will also be "B. F. Goodrich, first in synthetic rubber."

*In war or peace*

# Picture OF THE MONTH

Metro-Goldwyn-Mayer Presents  
William Saroyan's

## THE HUMAN COMEDY

starring

**MICKEY ROONEY**

with **FRANK MORGAN**

**SUPPORTING PLAYERS:** James Craig, Marsha Hunt, Fay Bainter, Ray Collins, Van Johnson, Donna Reed, Jack Jenkins, Dorothy Morris, John Craven, Ann Ayars, Mary Nash, Henry O'Neill

**SCREEN PLAY BY:** Howard Estabrook,  
Based on the Book by William Saroyan

**PRODUCED AND DIRECTED BY:**  
CLARENCE BROWN

**BRIEF REVIEW:** A coming event that is casting a considerable shadow ahead is "The Human Comedy". Via Hollywood and listening posts across the country, we hear that the picture tells a story so rich in meaning, so human in feeling, that it has everyone on his toes waiting for the Premiere!

"The Human Comedy" reaches down and touches the very earth of America. Its tender and sensitive story has caught the pounding heartbeats of the very real people it portrays—and magnifies them into a symphony of sound that is as strong as it is moving, as splendid as it is simple! You'll go down quiet country lanes and up the steps of rich mansions guided by the gentle but firm hand of Saroyan, master of the sweet and bitter-sweet!

All the nostalgias of boyhood will flow through you when Homer runs the 220 hurdles—and all your romantic inclinations will be with the tieless youth who woos the debutante daughter of the town's banker. Here is a story woven of the warp and woof of living and loving, dreaming and building. It is the big sum of all its wealth of tender and illuminating detail. It adds up to greatness!

"The Human Comedy" touches tragedy but it is never tawdry. It is mottled with sunlight but does not forget the rain. It probes the emotions so sensitively that as you see the story unfold, you will forget you are in the audience and step right into your part on the screen.

Metro-Goldwyn-Mayer has given this production the understanding directorship of Clarence Brown and the inspired interpretation of scene and role which the script demanded.

**ACCOLADE:** To Mickey Rooney who in this picture develops new stature as the young boy messenger whose duties bring him into contact with rich and poor and whose humanness brings him into direct contact with Life itself!

**LAURELS:** To Saroyan who makes the simple great—and simplifies the great—by applying the leveling touchstone of human feeling to all his characters.

**OLIVE BRANCH:** To all those who sometime claim that Hollywood does not make Great Pictures—here is a challenging story which will move the most critical to applause, for "The Human Comedy" has The Human Touch.

## ANY WEEK

THE most sensitive people in the world live in San Francisco. Not only are they delicate to the point of desiccation but they bruise to the touch. We have attended dinners in the town that seemed pleasant and cultured but we realize now that we were sitting on a volcano. The gathering was simply waiting in terror for the great blunder. The crime, of course, was uttering the word "Frisco." Neva Lee Budworth of that excellent

city has been protesting a caption in this magazine using the detestable word: "It means social ostracism in the Bay area, cold shoulders and unfriendly glares. Let this be a warning!" We are unable to understand this phobia because, to us, Frisco is the most beautiful word in the English language. It suggests romance, adventure, exciting life. San Francisco suggests nothing but fish grottoes, seals and Joe DiMaggio. The second most beautiful word in the language is Fresno.

IN TRUTH, love of place has always seemed to us the most pathetic of virtues. The native of Vermont who stands on the border of New Hampshire, two feet away, and says, "I couldn't stand an abominable climate like that," is no more to be admired than the gentleman who comments, with the air of having propounded a great truth, that New York is a nice place to visit. A word of reality is always a relief in this situation, and we think we've found it in a report from our Mr. James Darling, lately returned from a trip to western Canada, where he met a Negro cook and asked him how he found life in that vast waste. "Boss," said the cook sadly, "this country ain't nothin' but miles and miles of nothin' but miles and miles."

IT'S also miles back to the East Side of New York, but we are making it via a communication from one Bill Hebert of Hollywood, who forwards what must obviously be an apocryphal story about an East Side mother who had two sons, one of them a wizard in school, while the other always flunked. When the war came, both boys enlisted. The bright one went to officers' training school; the other entered the Air Forces and in no time at all was overseas in plenty of combat. Mamma was sitting on the front steps, a little depressed, the other day, after having just received a letter

from her son in the Solomons, when a friend passed by. "Hozz treeex, Mrs. Nussbaum?" asked the friend. "And hozz Louie and Henry—such smott boys?" "With Henry is everything fine," replied Mrs. Nussbaum. "Strictly kopacetik. He has just graduated from officers' trainink school. But dot dope, Louie, he writes he has just got three Zeros—again!"

JUST what Mrs. Nussbaum was doing on her front steps at this time of year is a matter for Mr. Hebert to explain, for we have had a tough winter in these parts and rarely leave the house without a cask of brandy around our neck. It has meant a great change in our life and we are sympathetic with David C. Waugh of Tomah, Wisconsin, who scoffs at the present regulations in England that cut down the depth of water in their bathtubs to five and a half inches. "Did you ever run five and a half inches of water in your tub and then get in and see how your body displacement pushed the water up the sides?" demands Mr. Waugh. "If you check, you'll find that the average amount of water in a tub in this country is from three to five inches before the person gets in." We confess we get a little more, because we have gone back to the old custom of taking our bath Saturday nights in a wooden tub by the kitchen stove. On a good night, the water often gets up to eight inches.

AND a letter from Arthur M. Herzog of New York states that he almost had the distinction of being the first native-born American shot for excess patriotism. It seems that Mr. Herzog was down at Penn Station seeing off a friend who was going to Camp Upton. As the line of selectees began to move, Mr. Herzog was pushed in among them by a tough sergeant. He protested, the sergeant admonished him to keep his lip to himself, and Herzog found himself on the train. He explained his dilemma to another sergeant, who said he couldn't do anything about it but suggested that Mr. Herzog might get off at Jamaica. Herzog decided it would be even better to get off before the train started, which he did—and was immediately chased by two other sergeants. He had almost reached the safety of the street when he slipped and was collared and dragged back

# "Thanks for helping"

We are grateful for your help in difficult times.

Here in the Bell System we have seen some 43,000 of our people go into the armed services.

Shortages of copper and other materials have made it impossible to add much-needed lines and equipment.

We have been unable to install telephones for all who want them and many of our lines are overcrowded.

Yet in spite of all this, telephone users have been tolerant and we have fewer complaints right now than at any time in the history of the business. Thanks a lot for understanding.

BELL TELEPHONE SYSTEM

**WAR CALLS  
COME FIRST**

Next time you buy a tooth brush, keep this in mind: Years of laboratory research have produced amazing new synthetic bristles . . . better, longer-lasting than natural bristle.

And among the new synthetic tooth brush bristles being marketed under various trade names, far and away the best are those made by du Pont.

#### PROLON — no finer bristle made

"Prolon" is our name for the very finest grade of this synthetic bristle that du Pont makes. So, when you read or hear competitive tooth brush claims, ask yourself this: *How can the same du Pont bristle, in another brush under another name, last longer or clean better than under the name "Prolon" in a Pro-phy-lac-tic Tooth Brush?* You know

the answer . . . it can't!

Pro-phy-lac-tic's big plus is that Prolon is the only synthetic bristle that is rounded at the ends.

Yes, under a special patented process, exclusive with Pro-phy-lac-tic, we smooth and round the end of each and every Prolon bristle in the Bonded Pro-phy-lac-tic Tooth Brush. See for yourself how much gentler these round ends are on tender gums!

#### Only PROLON has "round ends"

Remember, no other tooth brush has this important feature. So, next time you buy a tooth brush get the best you can buy for your money . . . get the Bonded Pro-phy-lac-tic Tooth Brush — the only tooth brush, by the way, with a written six-month guarantee.

... and don't miss this new line of hair brushes in gleaming Jewelite!

Pro-phy-lac-tic's latest triumph! Dresser sets and toilet brushes in crystal-clear plastic. Choice of four gleaming, jewel colors. Transparent Jewelite backs. Moisture-resistant, snow-white Prolon bristles. \$1.50 to \$10.00 — at most brush-goods counters. Illustrated: Roll-Wave, a unique "curved-to-the-head" brush . . . with comb, \$4.50

PRO-PHY-LAC-TIC BRUSH CO., Florence, Mass.

## KEEP UP WITH THE WORLD

By Freling Foster

Johnstown, Pennsylvania, is one of the few communities in this country in which party-line telephones cannot be tied up by lengthy conversations. Since 1939, its phones have been regulated by an automatic device which, after giving a warning signal sixty seconds in advance, disconnects all calls at the end of eight minutes.

Australia is the only democratic country that has completed the official history of its part in the first World War, the six-volume work having been finished recently after twenty-two years of preparation.—By Annie W. Robertson, London, England.

Naval guns fire such a variety of projectiles that the types are painted in different colors to distinguish them easily and quickly. Antiaircraft and bombardment shells are green, armor-piercing shells are black, high explosives are yellow, shrapnel are white, and gas are red. A white band indicates that the shell is also a tracer.

U. S. Army dogs are specially trained in rescue work. Upon locating a wounded man, the dog returns to headquarters, indicates his find by chewing his "brinsell," a short wooden stick that hangs from his collar, and leads stretcher-bearers to the spot.

Russia's refusal to disclose the names of the 2,500,000 Nazi soldiers killed or captured has been a major factor in the impairment of the morale of the German masses.

The compulsory banking of food-ration coupons does not affect about seventy-five per cent of the nation's retail food stores. Those who must have ration bank accounts are all food stores with two or more outlets and one-store retailers whose gross sales of all food was \$5,000 or more in December, 1942.

The expression "Tell that to the marines" is an old English phrase that first found its way into print in Sir Walter Scott's novel Redgauntlet, written and published in 1824.

In addition to its 24-hour clock U. S. Army now uses Greenwich Time exclusively to avoid confusion in time on our numerous islands. Example: Officers in Alaska and rocco, reporting incidents that occurred simultaneously, would use the same time figures, such as 27 meaning the 27th day of the month at 31 minutes after 13 or 1 P. M. the letter Z standing for Greenwich or Zero Meridian.

Cities in Free China are brightly illuminated at night by their systems of airplane defense. They always warn them of approaching bombers at least an hour in advance.—By K. B. Soon, Kukong, Kiangtung, Free China.

Latex, basis of crude rubber, is in varying quantities and qualities about 9,000 species of trees, shrubs and vines, differs from tree in that it does not seem to have any necessary function in the life of the plant. In fact, its natural purpose is not completely understood.

The first two cities to be awarded the "T" flag by the Treasury Department for having 90 per cent or more of their citizens invest over 10 per cent of their income in War Bonds are Cedar Rapids, Iowa, and Elion, New York.

The custom of slicing bread at commercial bakeries no more than one cent for a hundred loaves, and only three cents to the cost of producing an entire year's supply of bread for one average family.

Since officers of the Red Army learned from captured Nazis that they had expected to be buried in groups of these prisoners are frequently taken at night to the lines where they tell their former comrades, via loud-speaker, how well they are being treated.

Five dollars will be paid for each in or unusual fact accepted for this Contributions must be accompanied by factory proof. Address Keep Up, World, Collier's, 250 Park Avenue, New York City. This column is copyrighted by The National Weekly. None of the material may be reproduced without express permission of the publisher.

# This menace is in for a big surprise

Her name is *Anopheles*.

She is the mosquito that carries malaria.

From now on, she'll be much less of a menace to our fighting forces in Africa and the Pacific, and all of us here in America . . . thanks to a new Westinghouse development in the field of insect control.

*Insect control! Funny thing for an electrical manufacturer to be concerned with?*

Not when you know that this new device—a small metal cylinder containing Aerosol, a development of the U. S. Department of Agriculture—was made possible by Westinghouse "know how" gained in building electric refrigerators.

With this device, soldiers in combat zones can

destroy every deadly insect in barracks, dugouts, captured enemy positions, in an amazingly short time—with complete safety to themselves. Cargo and transport planes returning to America from malaria-infested areas can be rid of disease-laden insects *in flight*, long before there is any danger of bringing these unwelcome stowaways into the United States.

Is this so important? A high military authority has said that *this new Westinghouse device may save more American lives than any other single invention of the war to date.*

And it is only one of many Westinghouse products that are helping to bring Victory nearer. In addition to all the electrical products we are mak-

ing—and there are literally thousands of them—we are turning out such things as precision Army binoculars, huge steam turbines and reduction gears for ships of the Navy and Merchant Marine, plastic linings for Army helmets, control pulleys for aircraft, anti-tank shot, mountings for big Navy guns.

In peacetime, our principal business is *electricity*.

*But in wartime, our only business is Victory. And that means we are vitally concerned with anything—electrical or not—that our "know-how" can design or build to help win this war.*

Westinghouse Electric & Manufacturing Company, Pittsburgh, Pennsylvania.

Tune in the Westinghouse Program starring John Charles Thomas—NBC Network, Sunday, 2:30 P. M., Eastern War Time.

## WING TALK

THE Johns and the Sallys who are staying away from their war jobs for no particular reason have become a main problem in war production today and "absentee" has become synonymous with "enemy" in the building of war planes. Last year, it was estimated, the absentee war workers in the plane factories "shot down" between 500 and 600 planes.

Last December, for instance, the loss of man-hours in the Douglas Aircraft plant totaled 322,720, when employees failed to show up because they had hang-overs, had gone shopping or visited beauty parlors or done something else besides work. In that one plant, those absentees cost *fifty-five combat planes for Uncle Sam's Army and Navy.*

With more money than they ever had before, and squared away with their creditors, the workers get the habit of taking it easy to enjoy hunting, sports or other diversions.

Everything is being tried to solve the problem, at a time when all hands are needed to keep the planes rolling off the production lines. The excuses the workers give are usually worthless; nevertheless the situation has to be handled with caution. Personal service bureaus are being established to take care of little chores which often keep the worker from his job. A morale-building program is under way to show the worker the importance of his task, and it may even come to a point of having a ceremony at which the habitual absentees dedicate a plane which wasn't built. It will be marked "Missing—But Not in Action."

SOMEWHERE on the fighting fronts of the world today are a dozen gold-star fighting planes, marked to avenge the death of soldiers who used to work at the Lockheed and Vega plants in southern California. Those planes started on their missions last December, and in the months to come, others will be so dedicated to former employees who have given their lives in battle.

THERE will be virtual flying service stations for planes after the war if plans now being considered materialize. Looking forward to the vast increase in flying in all its phases, plans are being considered to give the fastest and cheapest type of repair service to plane owners and operators. And with it will be an aerial repair service, so that the man in the small town where no aircraft-repair facilities are available can get the same type of quick service enjoyed by those whose planes are kept at thoroughly equipped bases.

Under a plan being discussed now, main bases would be set up at strategic locations where the actual work would be done. A shuttle service would be operated, with work planes in the area served by each base which would send mechanics, parts and even rental engines for the customer's plane. Such repair depots would serve for the small feeder-line systems, on an annual contract basis, when those systems are expanded in peacetime. In addition to having the possibility of developing into big business, such an operation would afford employment for the boys who are servicing warplanes today and will

Mrs. Betty Chambers and Michael in front of a Lightning—a fighting memorial to the husband and father, 2d Lt. Robert W. Chambers—one of twelve planes dedicated by Lockheed and Vega to Gold men on the companies' service

be looking for similar jobs when they come back.

Hand in hand with this business is a circuit of aviation country clubs being opened in various cities. These clubs, in addition to the companionship they offer, will give their members savings on fuel buying and other benefits, through group purchasing. Even existing clubs may find themselves adding rooms and utilizing their existing facilities for profit when the nation swings on the peacetime aviation band wagon.

JUSTIN B. BOWEN

# GOODBYE—MR. ZERO!

Time was when the words "Jap Zero" sent a chill through the blood . . . *not any more.*

A new cock-of-the-walk is ruling upstairs—the fightingest Navy plane ever launched in the skies—the new *Corsair!*

Five tons of armored fury, it climbs like a rocket—faster, *higher* than any Jap has ever gone! And with it rides a blazing, blasting battery of high-velocity guns that can dissolve a Zero into thin air half a mile away.

*Tremendous power* is the secret of this new star in our fighting heavens.

And we are proud that the Corsair's engine—more powerful than any Axis plane known—is a war responsibility shared by the men of Nash-Kelvinator.

It may seem a far cry from refrigerators and automobiles to 2,000 h.p. Pratt & Whitney high-altitude engines, one of America's most intricate war production jobs. Yet it's only one of Nash-Kelvinator's war tasks: Already from Nash-Kelvinator have come thousands of propellers now singing their song of death and destruction over the arsenals of the Ruhr . . .

So to that lad who's riding the Corsair miles above the Jap battle fleet, we send this message from our men: "Go to it, fellow—knock the spots off of 'em! We will do our part just as you are doing yours. You'll get the best weapons man ever made. *Keep those guns blazing—'til the last rising sun and swastika are shot out of the skies!*"

# One passenger - or one million

**T**HOSE carefree days when a man could take a train almost as easily as he'd buy a morning paper are out for the duration.

Folks have to share the railroads with the Army and the Navy, just as they're sharing almost everything else these days.

We wish we could still offer you an unlimited choice of departure times and accommodations, *but more than a million and a half troops per month must be cared for first.*

That takes a lot of cars and a lot of locomotives.

It takes the time of a lot of railroad men, for these movements must be handled swiftly and secretly.

After meeting all the vast demands of a nation at war, we are not always able to serve the public as well as we'd like to—but nevertheless, with a little cooperation, *we'll get you where you have to go.*

Transportation is our business as well as our duty—and we want you to know that every railroad man worthy of the name has his heart in his job.

Association of  
**AMERICAN RAILROADS**  
Washington  
D. C.

AS MY story unfolds—provided that you have the appetite to stick to it—it will be made clear enough what a sourpuss is and why I have appropriated the label as my exclusive right. Mouth-to-ear rumors about a public man are generally so fiercely barbed that most people would be afraid to repeat them aloud if they were said of a private citizen. But of a man in public life they can believe virtually anything, provided that it is sufficiently unbelievable.

To illustrate: Should someone start a report that I squirt boiled oil on an unwelcome visitor, few people would doubt it.

Let someone whisper that I frequently order the Department of the Interior elevators shut down and all steps and landings well greased just before quitting time, and before you can recall the second verse of the national anthem, the story has become a part of my public reputation.

I expect that what I shall relate will not only reveal me in all the glory of America's No. 1 curmudgeon, but that it will be an inspiration to those who may aspire to pursue their way through public life as I have. It may encourage them to know that I have had a swell time learning the ropes myself. They are welcome to profit by my experience.

There was a time when, due to my mother, I was in danger of becoming, if not a mellow and urbane human being, at least an average one. How I escaped the fate of being just an ordinary American citizen who would pass the collection plate on Sunday in my home town of Altoona, Pennsylvania, and go to lodge meeting on Monday night, I will never know. It would have been a simple matter, as I review my career, to have developed into a pantywaist.

Originally the Ickeses got themselves out of Germany, which is an even better place to get out of today. This may account for at least some of the idiosyncrasies out of which my reputation has been contrived.

Four or five generations ago, we settled in Montgomery County in Pennsylvania, where my current paternal grandfather caught up with a young Swedish-Finnish lass in New Sweden, on the Delaware River, and married her.

On my mother's side, I stem from a line of Scots who, before the Revolutionary War, hit the trail along the Juniata River up into the eastern slopes of the Allegheny Mountains of Pennsylvania, where

KARGER-PIX

## CONFESSIONS OF A SOURPUSS

BY HAROLD L. ICKES

STORY  
about the

maternal Grandfather Ickes was later to overtake them.

Grandfather McCune (it started out years ago as McEwen) was a member of the state legislature, and his father was for twenty-seven years the nonlegal member of the county court of three in original Huntingdon County. Now you know where some of my love of politics comes from.

Politically, we were Republicans on both sides. Once my father was, briefly, an aberrant Greenbacker, and the family never quite outlived the disgrace of it. Our house was bright with lights and gay with bunting when a Republican torchlight procession passed. It was a complete blackout, however, when the unspeakable Democrats tramped by. Father ran for the council once in a strongly Democratic war and was licked by four votes. And I had peddled his cards!

One of the things they say about me now is that I have an uncanny ability to pick losers. Why, bless your hearts, many times I have supported a candidate when I knew all the time that he couldn't win. This gives one something to grouse about. The successful candidate will serve as an attractive target for one's villainous darts. Going down with the candidate you believe in is much better for your disposition, if you are dead set upon being a sourpuss.

I have never in my life supported a man because I thought that he was predestined

to victory. That would have put me in the uncomfortable position of having to defend when my nature was to attack. As a delegate to the Republican National Convention in Chicago in 1920, I yelled "No!" on the motion to make the nomination of Harding unanimous. Was I wrong?

When the time came that I must decide upon a career, my problem was to choose one where there would be feeble opposition and very little of that. It took me a long time to decide that I would do best as a curmudgeon, and I leave it to 134,000,000 Americans to say with what degree of success I have carried out my designs.

#### The Brass Band Wasn't There

I was sixteen years old when my mother died. Before she left us, she convinced my favorite aunt from Chicago that she ought to take me in. No high-hatted, stuffed-shirt delegation or police escort met the budding grouse from Altoona on that hot July day in 1890, as he stepped off the train at the Englewood Station. But the time was to come when this same youngster, sweet-tempered enough to begin with, was to have to wear a false beard to escape delegations of city dignitaries come to meet the Public Works Administrator (Old Sourpuss by then!) who had the penultimate say as to what towns and counties and states might have how much federal funds for what projects.

The baby picture, I blushing admit, is of me. And who, indeed, is man but a boy grown up?

Of course I went to school. If my drug-store uncle had had his way I would have become an apothecary. But it so happened that my uncle wasn't the boss. My Aunt Ada decreed that I was going to school, and to school I went. I had finished the eighth grade in Altoona without their having to burn down the schoolhouse, and my first job upon reaching Chicago was to jimmy my way into the Englewood High School.

Although president of my class in 1893, I was still modest and shy. I knew very few of my classmates. If I had had more experience with people, I would have realized that I shouldn't have accepted the presidency of the class. To the very end, there was a group that resented me as a carpetbagging intruder. Perhaps this was the beginning of my dead-cat-throwing public, of which I was later to be the proud possessor.

About that time, I went to bed with a bad attack of typhoid fever, as there was an epidemic in Chicago in that World's Fair year. Of this I nearly died but I managed to outwit and confound my enemies. I count it my first victory over them.

I recovered in time to return to my high-school duties with all of my lessons made up so as to graduate with my class. My recollection is, although this may fall in that category of family legends that are unreliable, self-glorifying expressions designed to refurbish prestige or hide soup stains—my recollection is, I say, that scholastically I ranked well within the first ten of my class of seventy-two. Bragging again!

That summer of 1893—the summer of the World's Fair—I went back to Altoona for the first time since I had left it three

Here I am with Colonel Theodore Roosevelt, snapped in the LaSalle Street Station, in Chicago. In case you can't tell, I am the one under the pancake hat

years earlier. There I found my definitely not interested in my college, and he turned a deaf ear to appeals for even a little in the financial help. I was never much peals anyhow, even then. I have preferred to "say it with bricks" was easy to turn down because I yet been kicked about enough for good.

My main source of income while college was earned as a night-school teacher. It was a precarious livelihood that to shrivel my soul. I taught English class of Scandinavians—mostly Swedes who had recently come to America.

At that time I must have been poor specimen of grouch. I still view that as a combination of air castles—very pretty it was! papers hadn't yet poisoned my still ignorant as to what extent corruption was rampant in public life. I had learned what a pitiless pounding a man can get when he goes into the public square. Mercy no, I am not complaining. I could do it again, I would take the road and, except for a few turns, follow the same route.

I managed to get my hands on admission to the Democratic National Convention which met in 1896 in the Coliseum, a relic of the World's Fair later was destroyed by fire. William Jennings Bryan was known to me slightly, but that was all. My seat in the convention hall was a poor one. 'way back and 'way up in the top gallery. If there had been anything to the rafters, I would have been in there.

The acoustics were terrible. To us who were in the gallery had great difficulty in hearing. So much so that I adopted the habit of shaping my trumpets out of newspapers (they were their uses) and there we would sit hour with the trumpets leveled toward speakers on the floor below. It must have been a weird sight from the main floor, not to see any faces but only row upon row of newspaper cones in the galleries.

#### A Political Puppet Show

There were many outstanding figures among the delegates—David Hill, Senator Gorman of Maryland, Teller, the great silver advocate of Colorado, and many others, including a young free-silver enthusiast from Vermont named Carter Glass. What went on there did not mean much to me, and since I could hear well, even with my trumpet, I was content with watching, from afar, the known figures in what to me was a political pantomime.

Then one day Bryan asked for a platform and he began his cross-of-gold speech. His wonderful speech filled the auditorium. His was the speech that could be heard in every corner of the building. One by one the paper ear trumpets were dropped by the audience, spellbound, sat with intent upon this bold and eloquent congressman from Nebraska.

I comprehended only vaguely the issue in that campaign. As a true Republican, I was automatically a man, in addition to which, for such as I could understand, I believed in the gold cause. But this speech of Bryan thrilled me just as a speech.

Everybody knows what it did at the convention. During the short time for its delivery, Bryan became the man of the Democratic party and years thereafter held its leadership. He was licked three times for the Presidency but he was, nonetheless, a great influence upon our public life. He was also one of the great orators of all time.

# FOOD TO FLY ON

BY HANNAH LEES

PHOTOGRAPHS BY W. EUGENE SMITH

It's the food you plan, it's the food you eat that counts. The RCAF found that. Now its messes are the best in the world—thanks to female flying officers who are content to stay out of the kitchen.

HERE were beans, among other things, for supper in one of the airmen's messes somewhere in Canada. The men were forming in line, the help were dishing it out when a trim little girl in Air Force blue and the stripe of a section officer stepped up to the pot and tasted the beans. The cook and the assistant-cook were right behind her. She looked at them and shook her head.

"They aren't cooked enough, Sergeant. Better give them the cold meat we were going to have tomorrow," she said.

The sergeant saluted respectfully, to the surprise of the girl in Air Force blue, and the order was carried out. The men waited, and cheerfully, when their supper, when they got it, was good, they thought they got them later, were good, too. They thought they would be. This had happened yesterday with the oatmeal and last week with the bacon.

You didn't know anything about service messing, might wonder mildly at a tough sergeant-cook taking orders from a woman. If you did know something about service messing, your eyes might pop out and with a look of surprise. For that little incident stands for revolution in the Royal Canadian Air Force—a revolution, what's more, with the pleasant distinction of having made everyone connected with it very happy indeed.

It started back in 1939 shortly after Canada got into the war. The Department of Defense, realizing that airmen were going to have to be properly fed so that they could fight, got out the old army ration from the war chest, dusted it off, and took a look at it. It didn't look good. We may not have learned how to prevent war, but we have learned a few other things in the last five years, and a pound of meat, a pound of potatoes and a pound of potatoes per man per day doesn't seem so perfectly nourishing now as it did then.

The Department of Defense very intelligently got together a committee not of soldiers but of nutrition experts, and this committee devised a new standard ration. It looked marvelous there on paper. Calories, minerals, vitamins were all nicely balanced one against the other. The authorities sighed with relief, put it into effect, and turned their minds to the important job of winning the war.

Now that might be the end of the story, and we never would get back to the girl tasting the beans if the Air Force, which in Canada is entirely separate from the Army, hadn't happened about then to acquire a minister who knew more than the average about public health, and was acutely aware of the connection between what you eat and how you feel. The Honorable Charles Stewart, who had been Minister of Pensions and National Health for the previous four years, was now appointed Minister for Air.

Mr. Power had a large job on his hands. Up to the outbreak of war, the Air Force had numbered some 10,000 or four thousand men. Now, as it became clear that a lot of the war was going to be fought in the air, it was going to grow. The British Commonwealth Air Training Plan was set up. More pilots, observers and air crews were going to have to be trained for efficient battle than a Minister for Air could have dreamed of before. The RCAF was going to have to do it. Men began to come streaming in from Great Britain, New Zealand and Australia, tens of thousands of men; in less than two years as a matter of fact, the RCAF grew from three or four thousand to something like 20,000.

(Continued on page 74)

Above: Here Airwoman Dibbs and Aircraftsman Cameron are assaying food for vitamin A and carotene content. This is only one of the many tests made to establish a diet specially suited to the fliers of the RCAF.

At Guelph, the RCAF has set up a school for cooks, where they are trained in the actual conditions of an air station kitchen. These hams attest to the quality of the meat and the skill of the cook.

**1ST** First Prize: Morning in McSorley's Bar, by Benjamin Rosen. Rosen entered 27 pictures for show. Jury comments: "When does he have time to sail?" "He's several fellows, isn't he?" "He's big." "I like his command of the palette." Rosen loves to paint and to talk. "You get good discussions at McSorley's," he says

**2ND**

Second Prize: Mister Chairman, by Milnes Levick, drew praise from the jury, who liked the strength shown in Milnes Levick's work. His subjects, like Hunger and Loaves and Fishes, are strong, too

Honorable Mention: Lower Harlem Scene, by Carl G. Hill, one of a delightful group of paintings submitted by Hill's wife in his absence at sea. Colored, born in Trinidad, Hill shipped as a pantryman in October. He wants to become an able-bodied seaman, then learn to be a radio operator. He chose the sea because there is no discrimination shown among seamen

**HM**

Honorable Mention: Harbor Scene, by Captain John Cook Smith. "A real picture," said the jury. "Never had a lesson in painting in my life," says Captain Smith, turning up for the opening of the show. "These modernists—they what isn't there—what they imagine. I like to paint what I see. That other picture there—of the Queen Mary. I did it from a photograph. In pencil

**HM**

Honorable Mention: Carriage House, by Joseph Richards. Richards entered many scenes similar to this one in the show. They delighted the jury. "Such houses," says Richards, "are monuments to their owners, striving to outdo one another with doodads and turrets. They gesticulate." "Richards," the jury said, "ought to paint posters." He has—marine posters

**HM**

**HM**

Honorable Mention: Spanish Main, by George Heuston, painted Venezuela just before the outbreak of the war. "Seamen don't think man is a sissy to paint," says Heuston. "They think he has some savagery." Heuston has painted all over the world. Says Nile green is really so, the colors in a Chinese scarf are actually those of the Chinese lands

# SEAMEN'S ART

Ruth Carson

REACH a seaman, and you've got an individualist. Also, frequently, an artist. Which Mrs. Isabel Peterman, United Seamen's Service, New York, talking with thousands of men as they drift through the harbor, is quick to see. So she organizes a show, writing letters to be sent to union halls from Boston to New York soliciting entries. The result is 400 pictures from close to 100 artists, the first seamen's art show. Organized by a Chinese, U. S. seaman, a native of Trinidad, a naturalized Russian, men from almost every country of Europe, black and white, now manning the ships of the United Nations. That won the praise of the distinguished jury called to judge them: John, dean of American painters; Clark, etcher; Raphael Soyer, sculptor; Gordon Davidson, sculptor; Gordon Davidson, sculptor; John Taylor etcher.

They awarded first and second prizes and five honorable mentions, releasing third prize for the artist to deal out, which it did just to press. Herman Brockdorff, and Dane, was the winner. A most of his life, painter only six years, Brockdorff has a yen for the country, too. His prize winning painting of red barns which Mar-Dimock of the War Shipping Commission, up from Washington opening of the show, bought on the whole show made such a hit, that the War Shipping Board send it on tour around the country as a lure to recruit seamen. It comes first, art or the sea, is as hard to tell. Professional

artists have gone to sea, to get the color of the sea and foreign lands, and they have stayed because the life of a seaman—free, his own, not pressed by competition, no matter how hard he works—is also the life for them.

The seaman is an individual, with time and opportunity to think his own thoughts and be himself. Few would call themselves artists. But artists among them will tell you that all sailors have a sense of beauty and fine work. In their hours off at sea, undistracted by family, movies, chores, trips, all the afterwork business of a man ashore, they have time and urge to express themselves. They will paint or sketch, whittle and carve, mount masterly displays of seaworthy knots, knit or do needlework.

If more of us could be seamen, artists gone to sea will tell you, we'd be that much smarter as a nation. Stumblebums at sea are a thing of the past. Of course, seamen go ripsnorting up the street at times—so would you, if you had been shipbound for months on end. Especially now that those months mean danger and uncertainty and worse. But, torpedoed, dive-bombed, injured and shocked, they go back to sea; because it's their life and a job they know.

And still they paint and whittle and think. There's a painting of the Queen Mary in the show, by Brody, an Englishman. A minutely detailed painting, done in the cramped quarters of his ship's berth, and good enough that the Museum of Modern Art wants to buy it. There are paintings done in hospitals, and rest homes, at sea, in lifeboats, as well as on leave ashore. You can torpedo and bomb and sink them, but you can't stop them. ★★★

HM  
Mention: Lithograph, Harbor Light at Kingston, Jamaica, by William Ryan. "It's got verve, spirit, glow," said John Taylor Arms, etcher, wanting to buy it for himself and to exhibit it at the National Academy. A group of Ryan lithographs were in the show, though water color is his specialty. Just to show them? HM

Russian-born Ben Rosen, purser (left), went to sea in 1920. He sandwiches music with painting and seafaring, heading for a café piano in every port. Won first prize in show with his painting Morning in McSorley's Bar, upper left on opposite page. Joe Richards (center), ship's carpenter, loves the sea, will quote you Moby Dick (Chapter 23) to explain why. Has sailed since he was 17. Honorable mention in show, lower left picture opposite page. Milnes Levick (right), shipped for the first time last summer, to do his duty in the war. "I like seamen," he says. "They have a sense of reality." Awarded second prize for Mister Chairman, upper right across page

William Ryan worked his way through school by shipping as an able-bodied seaman, painting and selling pictures, playing breakneck pro football. Has been a seaman full time since the war started. On lookout duty in the Bay of Bengal, he spotted a Jap dive bomber making for his ship. "He really did a job on us." The cargo had been landed, but paintings Ryan had been doing for seven months in off-duty hours went down with the ship. He was injured in getting off. "But a wound will heal. Your work is lost," he mourns. En route home he painted more, lost it via torpedo in the Caribbean. The only thing he salvaged was an action picture of the first sinking, penciled in a lifeboat on the back of a soup label and stowed in his wallet. Ryan is now an ensign in the Maritime Service. The two stars on his chest are for being torpedoed and dive-bombed. He won honorable mention for his lithograph shown on this page

George Heuston at a show of paintings he did at sea in wartime. In spite of brushes with the military police, who suspect all pictures, he has kept painting. Torpedoed 1,200 miles at sea, he saved his work. On third day of eight spent in a lifeboat, did another painting. Sailing since 1928, Heuston was an oiler. Is now third engineer. His Spanish Main, lower right on opposite page, won honorable mention

Captain John Cook Smith, 76, relative of famous Capt. Cook, went to sea when he was 14. "I've sailed the world over," he says. "Been to every race track. Had two Christmases one year"—when he crossed the 180th meridian. "Had two plum duffs." Capt. Smith lives at Sailors' Snug Harbor, home for retired seamen. He started to paint six years ago. Won honorable mention with Harbor Scene, center right on opposite page

Right: Jeanette Herzen gives official Girl Scout salute. She belongs to a Los Angeles troop. Other Los Angeles Scouts shown here are typical of the more than 600,000 U. S. Girl Scouts. They celebrate their 31st birthday March 12th

# SCOUTS AT WORK

By Ruth Bugbee

**W**HAT to do for the war is no problem for the Girl Scouts. It's the habit of these busy, self-reliant young girls to be useful. "On my honor, I will try," pledges a girl when she joins the Scouts, "to do my duty to God and my country; to help other people at all times; to obey the Girl Scout laws." Which is a large order, since Scout laws involve loyalty, courtesy, friendliness, pledges to be cheerful and thrifty and to obey authority.

More young girls would like to make this pledge than there are troops for them to join. The need is for more leaders, to direct more troops . . . a chance for hundreds of women who want to do something, to do it in an important way.

Working to keep their promise, Scouts naturally enough develop the makings of fine and capable citizens, their major contribution to war and peacetime. Their activities, besides, concentrate on specific war jobs. They help take care of small children to free mothers for other war work. They tend their own Victory Gardens. They help farmers.

Last year, they put in more than 48,000 girl-hours, spraying, weeding, picking, milking, pitching hay, gathering eggs. They promise to do more this year, and the farmers will welcome them back.

Not to waste motion, Scouts work with and for other organizations. Requests for help come in through the local Council, or the troop leader rounds up work in the community that the girls can do. They turn over some of their two-hour weekly troop meetings to sewing for hospitals and for the Red Cross, or to baking cookies and making gifts for the USO.

After school, each girl averages two hours a week besides, on special troop or service activity. The Scouts run errands for the OCD. Take part in community scrap collections. Address envelopes for War Chest campaigns.

The Senior Scouts, from fifteen- to eighteen-year-olds, specialize their activity according to their interests. There are the Wing Scouts, preparing for aviation jobs. They study for factory work or to work in transport companies or to be fliers. They make model planes for the Army and Navy and help their plane-spotting seniors.

There are the Senior Service Scouts, trained for civilian defense. They could and do put their elders to shame. They are expert campers, Red Cross first aiders. They specialize from there. Some in canteen work. Some in child care. Some in transportation and communications—which means that they know how to repair as well as use a bicycle, boat or car;

PHOTOGRAPHS BY INTERNATIONAL

can run a switchboard and know Morse code. Others know what to do about clothing, shelter and recreation for evacuees. The Service Scout program has been made the extracurricular part for girls of the Victory Corps in some schools.

Such activities develop Scouts into useful, resourceful women, ready to serve as Waves, Waacs, Spars, girl Marines, wives, mothers, workingwomen anywhere. Scouting, says Mildred McAfee, director of the Waves, is some of the best training she could ask for a girl some day becoming a Wave. And an Army nurse on duty overseas writes: "I am thankful I was a Scout and learned to take care of myself outdoors."

Scout training is practical. It is also fun. And Scouts learn to get along with people. Maybe that's why the government is encouraging Scout troops among Japanese girls, in internment centers. ★★★

Salute to the American flag, and the Girl Scout banner beyond. Scouts of all races and nationalities, range in age from seven to eight

Scouts, youngest Scouts, at work for a hospital. They are especially good at small things like throat swabs. Here they make paper bedside bags

There will be no toy shortages in nurseries and hospitals if the Scouts can do it. They make stuffed animals out of scraps and non-essential materials

Scouts visit a children's hospital to present toys made at troop meetings. Scouts also sew for hospitals, tell stories and play games with children there

Eleanor Quan and Virginia Queen, president of her Chinese Scout troop in Los Angeles, at a bookbinding job, working on scrapbooks and pamphlets

Scouts helped save the walnut crop at a Van Nuys, Calif., ranch; here they take time out to sample the pick. They earned \$8.15, spent it on War Stamps

# THE SECRET LOVE

By Josephine Bentham

ILLUSTRATED BY EARL OLIVER HURST

Nina asked the names of his acquaintances and exclaimed in rapturous enthusiasm over each name he mentioned. She discovered that his name was Bill Davis

## The life and times of a Miss Nina Burton. Her specialty was the human heart

THE senior Burtons had gone out for the evening, tactfully leaving the living room to their visiting cousin and the cousin's admirer. But it had been a mistake to imagine that their daughter Nina, aged fifteen, would be capable of a similar discernment.

From Nina Burton's point of view the whole affair was decidedly pathetic—her cousin Alison being twenty-nine years old and Lieutenant Jeffries being somewhere in his middle thirties. Nina felt, strongly, that when people were tottering down to the end of their days it was a bit late for them to be making any moves in a romantic direction. They certainly were kidding themselves.

It was only out of the kindness of her heart that she had stayed on in the room—with some vague idea of brightening the scene with her youthful presence. Alison Craig and her caller sat side by side on the sofa and glanced at each other occasionally, but most of the time they looked at Nina, who was talking to them.

"Do you want to listen to the radio?" she said. "There's Bing Crosby, but it's only a transcription, of course. Maybe you'd like to get the Horror for an Hour program. Sometimes it stinks but other times it doesn't. Well, how about it?" she went on, patiently. "Would you go for that?"

"No," said Alison. "I don't think so. But you really mustn't feel you have to entertain us, Nina dear. If you'd like to go upstairs and do your homework—"

"Wow!" said Nina. "My homework's so terrible I'd just prefer you wouldn't mention it. I've drawn a veil over my homework. What program would you like to listen to?"

"None of them," Rand Jeffers said. "It

may sound a bit peculiar to you—just like to sit here and talk to cousin."

Nina greeted this with a broad smile. "Wow!" she cried. "Was that a comment, Alison! But, my goodness! I just sit and talk if you want to. I don't have to listen to the radio. I know a girl at school who has to have a radio on all the time or it makes her nervous."

Rand's comment was a trifle irrelevant. "It's a pity you haven't a date of your own," he said, and then, suddenly, he grinned at her. "Now I have a greening half-grown sprout of a nephew your age. Maybe I ought to have brought him over. They tell me he's won with girls—mows 'em down like a wheat."

Nina stiffened. "Men fail to fascinate me," she said. She crossed her fingers, thinking of Grant.

"I mean," she added, "the kind of that would be anybody's nephew. body like that would just simply accelerate the old pulse."

"I see," said Rand. Alison was looking at him out of the corner of her eye.

"What about our going for a walk?" said. "Just a nice, brisk little walk?"

"But Mother said you oughtn't to go!" Nina reminded her at once. "We were coughing this morning and Mother thought maybe you were getting a cold."

Alison brightened. "That's right—" she said. "And I ought to have some lozenges. Nina, you mind very much running down to the drugstore and getting me some?"

"Why, sure!" Nina said, thinking of the whiff of the old ozone—

She scrambled to her feet and grabbed her coat and tied her scarf around her head. But when she got to the door she turned to smile at them.

"I'll be right back!" she promised

# CHINA NIGHT

Pearl S. Buck

EDITED BY MARTHA SAWYERS

by Thus Far:

At the Japanese attack Pearl Harbor, Lieutenant Daniel ("Dan") James, of the U.S. Navy, is houseboating in China with his friend, old Hatford and his beautiful Eurasian daughter, Leone. The young American goes to Shanghai, where he is arrested and sent to prison by Shigo Kuyoshi, a Japanese official. When he is sentenced, there are two other prisoners: a young man, Barchet, an American newspaper reporter; and a Mrs. Shipman, who runs a home for the "of Hope," a home for unfortunate women who are interned—Jenny in her home. . . . Leone is in love with James. So, eager to see him, she runs away from her husband and goes to Shanghai. There she finds the home of old P'an Lao-yeh, her grandfather.

While, Jenny Barchet has learned something that terrifies her—Shigo has fallen in love with her. The fellow makes many advances; but she knows the truth—that Jenny loves James. The lieutenant to become his ricksha driver. A short time later, however, James—aided by Shigo's Chinese chauffeur—succeeds in his escape.

In a bad mood, one day, Shigo seizes one of his own girls—a child known as "Meri"—and takes her to his home. A few hours later, he orders his servants to put her out, throw her out. After which, he goes to Jenny's room (on the third floor of her hotel) and attempts to force her to accompany him to his home. But Jenny defies him; running to a window, she jumps out.

When Shigo reaches her, she is unconscious. He takes her to his home, where physicians find her condition is serious. . . . With the abduction of Meri, Mrs. Shipman gives up. She resigns herself, closes the home—which Japanese soldiers promptly loot. Then—like James—she goes into hiding in the home of P'an Lao-yeh. In contact with James, for a time, Ling Shigo learns where he is. Going to P'an Lao-yeh, he tells the story of Jenny's frightful escape. James—alone and unarmed—can do nothing. But Mrs. Shipman thinks she can save him. Rushing to Shigo's establishment, she goes to Jenny's bedroom. She finds him in bed and unconscious, with Shigo beside her.

The brave, fearless woman, Mrs. Shipman upbraodes the Japanese for what he has done. "But do nothing," Shigo exclaims, "but what can I do?" Then he turns and runs from the room.

## VII

THE PASSION of self-pity Shigo went into his study and, leaning his head against his arms, wept. So he was all misjudged by the white people—so were all people all misjudged! He could not have imprisoned Jenny, or had her shot, or might have deserved what Mrs. Shipman thought of him, but he had allowed her to live in luxury in the hotel. He had loved her instead of hated her, and for that he was blamed!

He wept abjectly for a few minutes. Then he dried his tears. Why should he weep when he was master here? Who was the woman who had come into his life like a thief and had driven him out of his room? He wiped his eyes hastily with his sleeve and ran up the stairs again. He knocked at Jenny's door. There was no answer and he opened it softly and found Jenny had not moved. He saw her sleeping face upon the pillow and her hair spread out. Mrs. Shipman was sitting on the bed. She looked up and met Shigo's eye.

"What is it now?" she asked loudly. He felt foolishly confused and did not answer. She stared at him for a long moment. "I'm goin' to stay here," she announced.

There the two young men were, standing side by side, both smiling. Leone looked at one and then at the other, and her cheeks flushed a delicate pink. But she did not smile at either one of them

announced, "and take care of her. Now you get right out."

He wavered and then bowed his head slightly. "You are too kind," he said bitterly, and shut the door swiftly behind him.

IN HIS own court Daniel was pacing back and forth. He was not a prisoner. At any moment that he liked he could open the gates and go out. Yet he did not go. He was caught in a dozen webs of indecision. He had not seen Leone for a whole day, not indeed since Mrs. Shipman had left them alone together. He knew now that she loved him, and he was in that strange, half-tender, half-shy state of a young man who is in love and yet knows himself beloved by another whom he might have loved.

His love for Jenny was so tenuous that sometimes he doubted its strength. After all, he had seen Jenny but twice. How much did he love her and how much was it chivalrous possibility of love for a beautiful American girl whom he must not leave behind him when he planned to escape from this prison of a city? He did not want to leave Mrs. Shipman behind either, and yet he knew that he could not possibly leave Jenny behind, lest the memory of her terrified eyes haunt him forever. She had become involved with him. It would not be an escape unless somehow she were free too. If she could not be free, he would stay prisoner with her.

He was in a fever to know what was happening in the Japanese compound, but no news came.

Near noon of that day Ling came slipping through the gate. "Ling!" he cried. "I've been hoping for a sight of you."

Ling grinned his sidewise grin. "My

no can talkee you evly day," he said. "Suppose Jap masta watchee my, my no can come too quick this side."

Then with halts and twists and searching for the pidgin English words necessary to tell his tale, Ling made it clear to Dan that Mrs. Shipman was taking care of Jenny, and that Jenny was still unconscious though the Japanese doctor had been twice to see her today.

"How have you found this out?" Dan demanded.

"Old Jap amah she talkee cook," Ling said. Then his narrow face grew very solemn. "My come this side talkee you," he said. "You keep velly quiet. Jap man have got many, many soldiers out looker see evly house for you. Suppose he catchee you." Ling cocked his long forefinger in the shape of a pistol and aimed it at Dan expressively. "Too bad," he said. "You keep this side, please."

So he conveyed to Daniel that the city was being searched for him. He nodded, and Ling, smiling cheerfully over his bad news, disappeared.

But outside in the main room Leone was waiting for him. He repeated his news to her while she listened without answer. This morning, he told her in his running fluent Shanghai dialect, Shigo had got up in a violently bad temper. "Full of ten thousand devils," he told her. No, he had not attacked Mrs. Shipman or Jenny. He had only commanded the old Japanese woman to stay in the room with those two and watch everything that was done and report to him. Beyond that he had ordered soldiers to search every house in the Chinese city. Not one house was to be left unsearched. Daniel must therefore be got out of the city and at once.

"He will not go without the white girl," Leone said.

"You must compel him," Ling said. "You must tell him that you may all be killed if he is not taken away from here."

"How can we hide a tall fellow such as he is?" she asked. "And where shall we take him?"

Ling cracked his finger joints one by one as he pondered the answer to her question. "He must join the guerrillas," he said finally. "It is only by burying him among them that he can be hidden and they will help him to escape to the free lands."

"Yes," she said. "Why did I not think of them? I passed through a village of them not many days ago. There was a tall fellow there who brought me near to the city."

"That is the Silent Wolf," Ling said. "I know him—a young man with red cheeks like a boy and he stammers when he talks."

"That is he," Leone said. "But why is he called the Silent Wolf?"

"People laugh at him when he stammers, and so he will not talk unless he must; but the strange thing is this: When he gives orders for battle he does not stammer at all," Ling replied.

"He did not stammer when he talked to me," Leone said.

Ling laughed. "Do not tell that, I pray! For it is said that only in love and battle the Silent Wolf does not stammer."

At his laughter her delicate face flushed bright red and she made haste to speak of Daniel again: "I think we can get this foreigner away from the city."

"I will go and find the Silent Wolf," Ling said. "Meanwhile keep that foreigner (Continued on page 22)

# A Woman Can't Win

By Isabel Scott Rorick

ILLUSTRATED BY MARIO COOPER

Mrs. Cugat learns that it is still a man's world after all. But they had to pull a technicality on her to prove it

**P**ULL!" said Mrs. Cugat clearly and a dark disk shot into the air in front of her and soared swiftly over her head. In one nicely co-ordinated action she raised her shotgun, pivoted smoothly and squeezed the trigger. The disk shattered and the imprisoned breath of some fifty onlookers escaped with a sigh—a sigh almost immediately overtaken by a torrent of applause. She lowered the gun, broke its smoking breech and smiled. Then her heart started to pound. She'd done it! The crowd closed in. "Atta girl, Liz!"—"Boy! What a performance!"—"You were wonderful, darling!"—"Can you beat it? And with a four-ten, too!" Her eyes sought Mr. Cugat's. He was beaming like a lamp. All he said, however, was, "That was okay, Baby," and ruffled her hair. What she'd done was to win the Willis P. Parmenter Trophy Open Skeet Shoot!

The trophy's defender, a Mr. Pelley, pushed his way through the crowd and offered a small, dry hand. "Let me be the first," he said bleakly and was again swallowed up. The crowd chattered with satisfaction. Mr. Pelley's name had been engraved on the trophy's base for five years now and he was beginning to think, perhaps justifiably, that he owned the thing—also that he and Sergt. York were in a class by themselves. Nobody had ever liked Mr. Pelley very well anyway, and to have him finally put on ice by little Mrs. Cugat was wonderful!

Mrs. Cugat was one of the few women who had ever entered "the P. T. Open." It was deemed an important event, not to be slowed up by the merely mediocre. Mr. Cugat had been a little startled when she'd calmly announced that she had sent her name in. He had shaken his head ruefully and declared she hadn't a chance—but he only half believed it. Mrs. Cugat, the last person in the world you would have thought it of, to look at her, since she was small, blond and wholly feminine, had an eye like a secret bomb-sight. "I always just seem to know I'm going to hit it, so I usually do," she explained it simply. She had learned to shoot at an early age at summer camp but like anything too easily mastered, it hadn't interested her much and she'd only lately discovered skeet—for which she used a four-ten. Mr. Cugat had gently suggested that for the Parmenter Trophy—perhaps a twenty? But she wouldn't hear of it. "A twenty makes so much noise," she'd protested.

At the end of the first round she'd found herself, much to her own and everybody else's amazement, tied with Mr. Pelley with twenty-three out of twenty-five and the gallery was with her

to a man. On the second round tied again—each with a perfect score. The judges had then requested that they continue shooting singles until they missed—a grueling business. Mr. Pelley, for the first time in the memory of man, began to look rattled. Mrs. Cugat, with no idea she could really win, had gone on knocking them down. Mr. Pelley cracked.

Willis P. Parmenter, a goateed, revered sportsman in plus-fours and a Norfolk jacket, came forward to present the trophy. "My dear," he began, "I am honored!" Having never had a chance to present his trophy to anybody except Mr. Pelley, who simply detested, he let himself go. Mrs. Cugat—comparing her ly to Diana the Huntress and one of the other minor crack shots, and w up with an impulsive invitation to day's shooting with him at his club. It is probable that Mr. Pelley, hearing this, suffered a severe pain in the neck. For as many times as he had captured Mr. Parmenter's trophy had never yet received an invitation to shoot at his duck club—and he had cut off his ears for one. As for any other man.

**M**R. PARMENTER'S duck club was the Bay Beach. It was a hundred years old and the members, if you could get one, cost a thousand dollars. Mr. Cugat belonged to it, having inherited his membership from a rich great-uncle who had left him nothing else, and every year, a week, during the duck season, could get away, he spent a night at the club. Mrs. Cugat had never even seen the place—as few women had. There was no rule banning women from its facade but as each member was allowed only one guest a year and an invitation to shoot there was to be prized accordingly, few women ever made it—well, of course, having no business in a club, anyway. Its traditions, customs and myths were legion; the excellence of its cellar, the lavishness of its picturesqueness of its employment, famed in song and story. One (ad nauseum if one were a wife) could tell tales of old Olaf, the punter, rapt in praise of Mrs. McIntosh, the cook; above all, fatuous accounts of the game warden, Eric Swain, who, to them tell it, was evidently a magnificent combination of Paul Bunyan, Ebenezer Boone, Hiawatha and Tarzan. They were instinctively curious about Bay Beach but it had, somehow, managed to remain—even in these days of women, rampant and untrammelled—sacrosanct, male and inviolable.

Mrs. Cugat, riding home from the skeet shoot, the Parmenter Trophy clasped to her breast, bounced in her car seat with pleasure. "I can now wait for the duck season to open," sighed happily, "so I can go down to Bay Beach."

"Don't be silly," said Mr. Cugat. She turned to look at him. "What do you mean? You heard Parmenter ask me, didn't you? You wouldn't miss it for the world!"

"Good Lord, honey!" he protested. "I'd feel like a fool bringing you

(Continued on page 46)

They rounded a bend in the road and there it was—the famous Bay Beach clubhouse—but save for a few lights, the scene was empty

# HAVE YOU A MAN IN THE ARMY?

**DON'T** wave or signal or try to attract the attention of a man marching in formation. He's not allowed to answer—even to look at you—regulations say in formation marching he must always look straight ahead.

**DON'T** try to surprise your soldier by dressing in "military fashion"—he sees plenty of uniforms. Above all, don't turn up wearing slacks! Wear your prettiest, most feminine clothes—that's the way he wants to see you.

**DON'T** ask a soldier to carry packages or an umbrella. He'll do it, of course, if you ask him to—but it's considered unmilitary and it's apt to get him into difficulties—particularly when he has to salute an officer!

**DON'T** send him anything too big to conceal in his bunk or duffel bag. At daily barracks inspection, *nothing must show except government property*. DO remember the preferred gift is cigarettes... and the favorite is Camel.\*

**Do remember—**

## Camels

**are first in the service**

**W**ANT to know a secret about that man of yours in the Army?

Well then, it's this: in spite of the fact that he's doing the biggest job in the world—the "little things" count for a lot with him.

"Little things" like the right cigarette, for instance. There's a good reason why men in the Army...in the Navy...the Coast Guard, and the Marines prefer Camel. You see, Camels are expertly blended from costlier tobaccos—tobaccos that are rich in flavor, for lasting enjoyment—tobaccos that give extra mildness, yet are never flat or thin-tasting.

Trust the men in the service to spot the difference! And, of course, that goes for millions of smokers on the "home front," too. They know that Camels are more pleasing every way. If you're not a Camel smoker now—make your next cigarette Camel.

## THE T ZONE

—where cigarettes are judged

The "T-ZONE"—Taste and Throat—is the proving ground for cigarettes. Only your taste and throat can decide which cigarette tastes best to you

...and how it affects your throat. For your taste and throat are individual to you. Based on the experience of millions of smokers, we believe Camels will suit your "T-ZONE" to a "T."

## China Flight

Continued from page 19

content to stay hidden here. I thought I saw in his eyes a plan to escape somehow for himself."

"Oh, no!" Leone cried. "Then I will go to him at once."

Ling sauntered away at his usual lithe gait which seemed slow because it was so effortless and yet actually was so quick and Leone made haste to Daniel.

She knocked on the gate to his court and then went in. He was there thoughtfully staring up at the high brick outer wall, whose top was bristling with the spears of pointed glass against thieves.

"Do not think of it," she said hastily. He turned quickly at the sound of her voice.

"I can't stay here, Mrs. Hatford," he said. He had not called her that when they met yesterday. Today he wanted the safe formality of Arnold's name between them. It stopped her like a blow.

"Please," she said, "do not call me anything. That is, if you cannot call me Leone. No, but please, why can you not stay here?"

"Ling told me the Jap had sent out more soldiers to search for me," he said. "I know what that means if they find me here—they won't only take me. You and your grandfather will suffer too. I've got to get out on my own. The only trouble is—how can I keep somewhere near Jenny?"

"PLEASE," she said. She was about to say, "Do not think of us." Then she paused and held back the words. It might be well to use his thought of them to persuade him to go with the guerrillas. "Yes, if he would go for no other reason, that might be well. She changed what she was about to say. "Please," she began again. "We have already thought of a way to hide you somewhere else."

"Near here?" he demanded.

"Not too far," she said, "somewhere where you can wait, if you must."

"Tell me what you are talking about," he demanded.

So she told him. "You are so tall," she said in her soft, caressing voice. "You must know how difficult it is to hide you. But thank God your eyes and your hair are dark and there are Chinese whose skin is almost as light as yours. But it is your big bones that cannot be hidden. Therefore, you must please join the guerrillas. There are many of them and some of them are tall, too, being farmers' sons and country folk, and you must live among them."

He liked the idea at once. "I'd like to take a chance at a pot shot against these Japs," he said. "It's a good idea. Maybe they'd help me get her out, Leone?" He was so forgetful of her that her name fell from his tongue without his knowing it. But she heard it and treasured it.

"Perhaps they could," she said gently. Then she took a step toward him and touched his arm with her soft hand. "We will all try to help you, big American. I will try, too—and I will help her—so that—how do your fairy tales go? So that you can live happy ever after."

He grasped her hand and held it for a moment between both of his. "Thank you, Leone," he said and such passionate pity swept over him that he leaned and kissed her cheek quickly.

AT THE village of Yang, Ling was enjoying himself. What he was telling was big news and he took plenty of time to tell it. The men of the Yang house were gathered about him, and Mother Yang was there, to keep the teapot hot, and the Silent Wolf had been sent for and found.

"So the Silent Wolf is to find a way to send someone to the P'an house and there he is to get the tall American out with him

and bring him here," Ling announced. "And then the Silent Wolf himself will decide what further to do to hide him."

"It is likely that the enemy will search the villages near the city also," old Mr. Yang said. "It would be better therefore to take the American somewhere else, especially if he has blue eyes and red hair. Nothing can be done to hide these defects."

"Heaven has given him hair and eyes like ours," Ling said quickly.

A sigh of relief went like a small wind over the company. "Then our difficulty is halved," old Mr. Yang exclaimed.

All this time the Silent Wolf had not spoken. Now he said clearly without any stammering, "I myself will go."

Everyone burst into laughing. "Is it for love or battle that you go?" a man cried.

The Silent Wolf grinned and would not speak again. But now there rose protests

made their way to the house of P'an to pretend to collect refuse.

Now Ling had gone ahead and prepared the way, and so the gateman knew what to expect and without a word he let in the pair of dirty men with their buckets, and by this means the Silent Wolf came into the very house where Leone was. She having heard from the gateman what was expected was waiting and ready and she had told her grandfather, so that Mr. P'an was ready, too, and they were together in his study.

ALL the windows were shut tight and the curtains drawn and the door barred behind the Silent Wolf when he came in. He was young and his vanity had made him wash himself in the gateman's house and comb his hair and take off his filthy outer garment, so that now when he came in where Leone and her grandfa-

ther except that my grandfather is a woman. If I can repay in some way, I will do it. You ask me once to tell you news as I heard that I am willing to do."

The Silent Wolf nodded his head. He made a great effort and then something came out of him. "What can be done, that I will do," he said.

Then Leone went on, taking the matter out of her own mind as she talked.

"We could send him back with a pole and a bucket and who will if he is one more among the ones who came in?"

Now unluckily the guards had come to the refuse collectors as they came this the Silent Wolf made haste to her for he had a plan of his own. His eagerness he spoke clearly enough.

"It is bad luck that the guards count us as we came in," he said. "We were so stupid as to say we came from one village. They will count us when we go out, for they put down a number." Then he came out with his own new plan. "Let the foreigners go into my clothes," he said boldly. "I will climb into his, and he can go to my place, and none will know."

"Alas!" Mr. P'an cried out, "it is little better for me to have you here than him! The enemy knows you, to have a price on your head."

BUT Leone made haste to cover with her own denials. "It will be all right, Grandfather, for we can hide the Silent Wolf more easily. Still," and she turned to the Silent Wolf, "what would you do if anything happened to you? Could your brothers forgive us?"

But that handsome, smiling, cheeked young man only laughed. The truth was that he was momentary in sinking into a morass of love for this beautiful girl, and it seemed that nothing could be sweeter than to be compelled to stay in this house. He said even more clearly than he had spoken, "Bring the foreigner here and let me measure myself against him. I see how well he will do for me."

So a servant was sent and in a moment Daniel came back with him.

"This is our good brother," Leone said to Daniel, and she motioned to the Silent Wolf. "He has come to help you outside the city."

The two young men now looked at each other. They were amazingly different though their blood was so different. Neither spoke the other's language. They were tall, the Chinese being as tall as the American, and both had dark eyes and dark hair. Daniel had a bolder nose, and the Silent Wolf had redder cheeks.

As for the Silent Wolf as he stared at this handsome and young foreigner, most mighty jealousy laid hold of him. He felt it in his belly like an ache. The blood rushed to his head until he was giddy. With this young foreigner in the house could the granddaughter of P'an household be safe? He wondered immediately whether or not she would like this foreigner and he looked at her. He saw the way she looked at Daniel. It seemed to him he saw love in her eyes.

Then indeed nothing could keep him from his plan and he turned to Leone and said, "I pray you withdraw from me and I can change our garments. The time is short that we are allowed to be here."

So Leone paused only to explain her plan to Daniel.

"You are to change garments with

COLLIER'S

"So he forgot! Is that any of your business?"

to his going. "It is not fit for our leader to go," one said.

"If the Silent Wolf falls into an enemy trap, who will lead us?" another said.

But to all this the Silent Wolf did not reply. When each had said his say and all had looked at him he only repeated, "I myself will go."

So it came about that on the next day at night he made ready his disguise. Now it was this man's great ability so to disguise himself that his own mother would not have known him, and he made himself look like one of the men who go into the city at night to collect soil and refuse of every kind to carry outside to sell to farmers to spread upon their land and enrich it. He put on filthy garments and tangled his hair and darkened his skin so his cheeks would not show so red and he carried two wooden buckets on a bamboo pole. When the others went into the city he went in and passed the guards easily.

Once inside the city he left the others except for one who was to go with him, and after bargaining at a time when he would meet them again, he and this other

ther were, he looked what he was, a strong and handsome man, and old Mr. P'an, who had only heard of him and never seen him, was amazed at him and pleased. He bowed to the Silent Wolf and begged him to sit down and was pleased again because the young man did not sit in the highest seat. There Mr. P'an sat himself and Leone let her grandfather speak.

"You must know how evil a state I am in," Mr. P'an began gravely. "There is a foreigner in my house, and I am too good a Buddhist to cast him out to die, and yet I cannot eat nor sleep with him here, and my only wish is to get him away alive. What befalls him after that the gods cannot put upon me."

The Silent Wolf was afraid to begin to speak, for fear of his defect showing itself, but he made the effort.

"I—I—I—" he began and then he closed his jaws firmly and the deep red flowed up from his collar. Leone smiled and spoke for him. "Well I know how brave you are and how willing you are to help us," she said. "I would not have a danger put upon you and taken from

## Our work sure means something when it saves Rickenbacker and his companions

THIS is Flossie Anson and E. K. Brown speaking. We're builders in the life raft department at Goodyear where the life rafts that saved Captain Rickenbacker and his crew mates were built. Their rescue certainly gave all our life raft builders a big thrill; made us feel like we really were in there pitching in this man's war. You know these self-inflating life rafts were developed by Goodyear. We built the first ones back in the twenties for use on Goodyear racing balloons. Now most

military aircraft carry them. So far in this war nearly two hundred Army and Navy flyers have been rescued in our Goodyear life rafts, some after being "lost" at sea for five weeks. Guess that's pretty good proof that when we cement a seam, we do it for keeps. Now we've a picture of "Rick" and his raft hanging in the shop. It's a reminder that we're helping save the lives of our boys out there. It makes our whole crew feel mighty proud of their work and its importance.

*Now more than ever* **THE GREATEST NAME IN RUBBER**

one and take his place in the village where you will be led. Please hold your head low and do not look up when you go out of the gate, and drop his shoulder cloth over your head thus—" and she snatched the Silent Wolf's shoulder cloth and threw it over Daniel's head—"as if to shield yourself from the wind, and so hide your face from the guards." And she turned swiftly now to the Silent Wolf and said, changing her language as though she had two tongues in her mouth, "And do you bid several of the men to put their shoulder cloths over their faces in the same way."

"I will command the man who came with me to tell them for me," he promised her.

Then she finished the matter to Daniel: "And you will carry a pole and two buckets on your shoulders, and be sure you watch the others at every step and only do what they do, so that you can pass the guards safely."

"But am I to wait at this village?" Daniel asked.

"Certainly you will wait," Leone promised him, "and in some way or other, though what way I cannot now tell, we will get Mrs. Shipman and the girl to you so that the three of you can escape together."

NOW all this time the Silent Wolf was frowning at Daniel, because he saw so clearly Leone's warmth toward him. And indeed her face softened and changed when she so much as turned her head toward Daniel, and not only the Silent Wolf saw this, but old Mr. P'an also, and he was alarmed enough. "What—" he said to himself, "am I to have still another foreign son-in-law when the other one is not yet got rid of?" And at this thought he determined to forward in every way that he could the plan of getting Daniel out of his house, and so as soon as Leone was gone, he said now to the Silent Wolf, in Chinese, and Daniel did not understand it:

"How grateful I am that you have thought of this way of getting the foreigner out of my house! Even though it will be no easy thing for my house to hide you, still I am overjoyed not to have the foreigner here. They are not such as should be near young women."

"They are not indeed," the Silent Wolf said fervently, "and I am glad to hear you say it so plainly."

Now Mr. P'an decently turned his back and so the two young men began to take off their garments.

It was done in a moment. The Silent Wolf surveyed Daniel from head to foot and tied his girdle over again and pulled down the edge of his jacket.

"J-j-j-jacket's too short," he muttered.

"It will do," Mr. P'an said gravely.

He clapped his hands and Leone came in. There the two young men were, standing side by side, both smiling. She looked at one and then at the other, and her cheeks flushed a delicate pink. But she did not smile at either one of them.

"Ling will bring you news of Jenny," she said gravely in English to Daniel, and then in Chinese she said to the Silent Wolf, "As soon as we can we will find ways of escorting you to your home."

"Do not hasten yourselves, I p-p-pray," the Silent Wolf replied.

So easily was it done and before dawn Daniel James, of the United States Marines, found himself in the midst of a score or so of scavenger coolies, all carrying poles on their shoulders and at the ends of the poles the most noisome smelling buckets of filth. When they came near to the gate he saw five or six take their shoulder cloths and put them over their heads and he remembered what Leone had said and he did it too, winding it about his head and catching the end of it in his teeth to hide his face.

They came nearer to the guards and he saw the men stir up the vile odors of their buckets with a stick. The stench was so fearful that he could scarcely draw his own breath. But he saw the purpose of it. For when the sleepy guards smelled it they held their noses with their fingers and motioned to the scavengers to go on their way. Thus safely he went with them, walking carefully lest he spill his filthy burden upon the guards as he passed and rouse their anger.

In a moment it was over. They were past the danger, and they moved swiftly down the country road.

IN THE rooms which Daniel had left, the Silent Wolf made himself comfortable. He had meant what he said when he told Leone that he was in no haste to go away again. When he told the man who had come with him of the plan to get the American out of the city, the man had wailed aloud because his leader was to stay in the dangers of the city where he

But the Silent Wolf laughed. "Y-you are an old-fashioned scholar," he said, "and you d-do not know the times have changed. We hillmen do not ask whether one of our number is m-man or woman, and we have women as we have men. I b-beg you to ask your granddaughter to sit with us and eat, for I-I-I-am accustomed to having all sit down to-together."

So Mr. P'an could do nothing, out of deference to his guest, except to send for Leone to come and eat with them.

She came in gravely and, indifferent to all she did, she took her place when her grandfather commanded it. She did not speak above a word or two in the whole meal, for she had no wish to speak, and seeing her so grave the Silent Wolf felt ill at ease, and he would not speak either because if he spoke he felt that he would stammer before her. But Mr. P'an did not notice their silence for his own talking, and he talked a great deal about how good the country was before any foreigners ever came to it and how all the evil that

any cursed waiting?" he asked him and drinking down a small bowlful of wine, he broke across old Mr. P'an.

Now Mr. P'an had been about to cuss the style of The Three King thinking that the tale of war would test his guest, and he blinked his eyes could not for a moment discern what the Silent Wolf wanted.

"Your g-granddaughter," the Silent Wolf began. "Let us discuss her."

Old Mr. P'an stopped, surprised at the words. "There is nothing to discuss," he said mildly. "She is your granddaughter."

"She-she has a husband, she told me," the Silent Wolf said. "But I wish to see her for my wife."

Old Mr. P'an cried out at this. "I see I must not deceive you," he said. "She is a half-and-half woman, half-Chinese, half-Japanese." This he said, still not wanting to say clearly how mixed his blood was with foreign blood.

"How half-and-half?" the Silent Wolf demanded.

Then bit by bit and evading and somehow telling it, old Mr. P'an told the story of what Leone was, and the Silent Wolf listened to it all.

"It may well be that you will not marry her now," old Mr. P'an said at last. "I cannot blame you if you do not wish to mix up your good blood."

The Silent Wolf bowed his head. Without speaking he got up and went to his own room. It would be idle to pretend that he was not astonished at what he had heard, but he was a simple man, and meant less to him that Leone was a half-Chinese than it would have meant had he been more learned.

"Curse me," he thought, "I had better marry her, for how else shall I forget her?"

"DANGER," Mrs. Shipman said suddenly. "Danger, danger!"

She had been preparing for this moment for days, this moment when Jenny's eyes opened. Ever since the old Japanese woman had been put in here to watch her she had talked aloud to herself constantly. The woman did not understand a word of English but Mrs. Shipman talked to her in English and about her and about the world, so long as the sound of her voice could run along. For some day, she thought, Jenny's eyes would open, and it would be necessary to say quickly the word she was now saying, "Danger—danger—danger!"

Jenny looked up with clear blue eyes. She closed her eyes again and lay still.

Mrs. Shipman stretched herself out on the bed beside her as she did every day for her naps of sleep. Under the coverlet their hands met and Mrs. Shipman was astonished by the firm clasp upon her wrist. The girl was stronger than she thought. The sooner they tried it the better. It would be hard for Jenny to pretend that she was unconscious when the sharp eyes of the little Japanese doctor fell upon her in the morning. The great difficulty was the Japanese woman. But even then Mrs. Shipman had a hope. She was quite sure there was something wrong with the woman. She had lain down whenever she could all day.

Now though none knew it, the truth was that Ling had done a little poisoning day before this one. Twice the Old Japanese Mother had held the lamp to the woman at midnight and made her signal. The time she had dropped a bit of poison weighted by a small ivory toy. On it was printed plainly, "Get me a strong rope. I'll be here tomorrow night to hang you at twelve o'clock."

At midnight the next night Ling had taken the coiled rope through the slit end of the long bamboo, and she had leaned over the woman and taken it.

Three days ago she had signaled a messenger. "Get the old woman away."

This had been difficult indeed. How

might be found. But the Silent Wolf bade him be still.

"I shall get myself out easily enough when I want to come," he told the man, "and you are not to send anyone after me or come for me or worry yourselves in any way. You are to obey my younger brother instead of me and do your work well. In a few days I shall come back."

Now the Silent Wolf had put off his return for one reason only. He was determined not to go back until he discovered for himself whether he could make a proposal to old Mr. P'an for his granddaughter. But could he do this at once? He was used to doing all he wanted done quickly, and a day to him was what a month might have been to a slower man, for when one lives with the chance of daily death as he did, delay is folly. Yet he knew that in some matters it is folly, too, to speak too soon. But he had determined that somehow Leone was to be his wife and that he would not leave her until she knew it.

Now old Mr. P'an greatly liked the Silent Wolf. Therefore he said to Leone, "When it is time to eat, I will eat with the young man, and find out what sort of heart he has."

So Leone gave this order, and when the mealtime came the Silent Wolf came to the table. Then he said to Mr. P'an, "How is it that there are only two places laid?"

Now Mr. P'an had never eaten with the women of his household, not with his own wife when she was alive, and so he said in surprise, "There are only two of us."

had ever befallen them had come from foreigners and how his only wish was to see them all gone again.

To this the Silent Wolf listened as though he agreed to all of it, nodding his head and eating bowl after bowl of rice as he listened. As for Leone, she scarcely heard the prattling old man. All her heart was in the question: "Has Daniel passed safely through the gate or not?" There was no way to know until they heard. For she had sent a serving man out of the city to see whether or not they got safely to the village but the man had not come back yet. Now as they finished the meal the woman who brought in the dishes came in and said that the man had returned.

"BRING him in," the Silent Wolf commanded. So the man came in and there before them he gave his story:

"They all passed safely through and they are in the village, and the foreigner is inside the courts of the house of Yang, and all is well."

Leone listened and her pale face flushed. Now that her first anxiety was eased, she longed to go into her own room and close the door and weep—for what, she did not know, but she longed to weep.

"I pray you will excuse me," she said to her grandfather and the Silent Wolf and rose and left them quickly.

The Silent Wolf looked after her as she went, and the sight of her slender body and her graceful head filled him with yet deeper desire for her. "Why should I wait

# Wise Rhymes for These Times

COLLIER'S

"They say the other girl took it pretty hard"

GEO. SHELTON

stared into space for several hours before he knew what to do. It was inevitable, he argued to himself, that within a very few days, if not hours, the girl would either awake or she would die. Through his talk with the old cook he discovered that each day for the last three days she had swallowed the soft rice and egg that had been put into her mouth spoonful by spoonful. Therefore, it was not likely that she would die.

This was now the tenth day of her sleep. Not once had the Japanese left the house. Twice a day the doctor had come to see her and gone away. Ling inquired of the household gossip and heard that the girl still slept. So after thinking a long while he sauntered down into the city to a certain pharmacy which he knew and there he asked the old man who kept it what sort of a poison could be put into the food so that it would not taste nor kill, but would nauseate the stomach and make the bowels fluid.

THE pharmacist looked like one of his town dried herbs, so thin and small and brown was he, and his hands were stained and wrinkled with his brews. He sucked in his lips over his toothless jaws and considered Ling's question carefully, and then he put on his brass-rimmed spectacles and weighed out an ounce of this and a quarter of an ounce of that on his small delicate scales, and sifted in some powder between his thumb and finger, and wrapped it all up in thick brown paper, and put a red slip on the packet and gave it to Ling. "A pinch of this in each meal three times in the same day and the one you wish ill will be busy with himself," he said.

So Ling took the small packet and put it into his bosom and sauntered back again, and for the price of a small bribe he persuaded the old cook to do the deed. It did not take much persuasion or much bribe, for the cook heartily hated the old Japanese woman on his own account, and was glad to help in so just a deed as poisoning one who, besides being an enemy, was also an old and ugly female with a bad temper.

Thus it came about that for two days the old woman had struggled against her inner sickness. She was so afraid of Shigo that she dared not tell him how she was roiling inside. At first she was not made ill, her vitals being leathery with age, but she was only very full of discomfort. It was by the second afternoon that she began to feel everything inside her conspiring together against her being.

She lay down that night on her quilt full

of anxiety for herself, and yet whom she tell? She had come to this house ing and without a penny, for her mistress had been a Russian woman, had fled inland from the wars. Ther Kuyoshi had hired her to empty the and scrub the floors, and had allowed other work because he saw she was and silent and faithful, and because pleased him by her hatred of the C and the foreigners alike. But no had ever been spoken between the cept command and obedience, and could she go now and tell him that important task he had given her, she fail because she had fallen ill? So she the illness and stayed in her corner t her whole body was in misery.

Yet the time came when her illness could not be contained, and so twice ing the day she had fled from the room ease herself, and was back again, without telling anyone. And so it about in the middle of this same when Mrs. Shipman lay awake and was awake too, as she knew from the of Jenny's hand, that they were both tled by a loud moan that burst from old woman.

The light of the oil lamp was new out in this room, and now Mrs. Shipman saw the old woman get up clutching middle and staggering across the floor the door. She pretended to be asleep from between her barely opened lid saw the old woman go out. Thus for ment they were alone, and she whispered to Jenny:

"Jenny, child—can you hear me?"

"Yes," Jenny whispered back. opened her eyes, and Mrs. Shipman up.

"Listen, Jenny, there isn't but a minute. She'll be back. But we're in this Shipman house—prisoners. We've got to think. The Chinese chauffeur is waiting for us. He's ready to help us. If you feel up to it, dearie, we'll just let him know. The sign's all worked out. You must just gather together all strength and help me."

"I will."

Mrs. Shipman listened for footsteps she talked. "Do you think you can make it tonight, dearie? Because the doctor will be around tomorrow again. I'm afraid he'll see that you're a again."

"I think—I can—tonight," Jenny pered.

"I've saved some broth for you," Shipman said. "If you drink it and a little, maybe—"

The old woman's footsteps were

ing the hall outside. Mrs. Shipman laid down quickly and closed her eyes and breathed heavily. The old woman came in and cast a look at the bed. They were both asleep, the old woman thanked. No one need know she was in the room. She lay down groaning and tried to rest and could not. The poison had laid its full hold upon her vitals and she was in agony. She lay not above an hour when she rose, gasping, and went to the bed. In the dim light she saw the girl, both fast asleep. The girl was unconscious. The old woman began to crawl across the floor again to the bed when she reached it she took the key of it and opening the door and locking it behind her, she locked it. This she could not come back quickly. Finally Mrs. Shipman was up.

"Then, dearie," she whispered. "I'll see that Ling!" She went to the curtains that were drawn and took the oil lamp and set it down on the sill. She opened the curtains and closed them a moment, and repeated this and yet again. Then over a spirit she heated the broth and gave it to the old woman came in now Mrs. Shipman would simply be feeding the girl. There was nothing to be explained. But the woman did not come back.

She did not come back and, listening, Mrs. Shipman pulled up her full skirt and the loop of thin strong rope from the window. Then, still listening, she wrapped Jenny in a warm coat and carried her out of bed, half carried her down the window. Jenny was making a desperate effort. But her feet felt separated from her head. She put them down one by one, as though they did not belong to her.

"Oh, dearie," Mrs. Shipman whispered. "You're doing wonderful." There was not a sound of anyone coming outside there was no moon. The air was damp and a wind was blowing, a cold wind, for it made shutters creak and the panes rub against one another and covered the sound of their escape.

"I'll be down there waiting for you, dearie," Mrs. Shipman whispered. "It's not far. We're only on the second story. There's only bushes below. I'll look down a hundred times getting ready for this. He'll be behind the bushes. I'll throw a thorny orange to the left, so bear up, dearie."

She lifted the girl over the sill and held her as long as she could, leaning out until she could lean no farther.

"Can do—" she heard Ling's whisper from below and then she let Jenny go. In a moment she grasped the rope for herself. She was fat and she went down too quickly and the rope tore the skin from her palms but she did not notice it. They were down, safe behind the bushes, and there was no sound from above.

"Praise God!" she whispered.

But Ling did not give her a moment. He had Jenny in his arms and was carrying her across the dark lawn to the compound wall. There he set her on her feet and unwound his long girdle from about his waist, a girdle of new cloth torn so long for this moment that he had wound half of it inside his jacket and around his thighs. He made a loop under her arms and with the end in his teeth he skinned up the wall like a cat, his feet finding fractional footholds between the bricks. On the wall he swept aside the glass spears with his foot, and then began to pull her up like a child. Over the wall he lifted her, hissing a whisper in her ear: "You take off cloth when you come down."

SHE felt the earth solid beneath her feet and, leaning against the wall, freed herself from the cloth and he pulled it up again.

Now he called in a low voice to Mrs. Shipman.

"Quick!" she called back. "They've found out!"

And indeed at this moment the lights flashed on in the whole house, and she saw the curtains of the room they had just left pulled apart and Shigo stood there in the light. He shouted out in Japanese.

Mrs. Shipman pulled the girdle and Ling began to lift her. Jenny had been so light that it had been nothing, but Mrs. Shipman came up like a load of stone. Ling braced precariously on the wall, felt his first great wave of fear. What if he could not lift the Old Foreign Mother? Should he let her down and save the girl? The old should be saved first, according to his own people, but would the young American excuse him if the girl was lost?

There were lights over the lawn now and in a moment, whatever he did they would be discovered. He groaned and pulled with all his might, clinging to the wall with his legs and feet, and Mrs. Shipman struggled and clawed to help him. He had her head level to the wall, then suddenly she felt her legs grasped and held firmly.

"They've got me!" she whispered between her set teeth. "Run for it, Ling—save the girl!"

(To be continued next week)

"This is the first time I've paid an income tax. Now I just hope I've got enough with me to pay you whatever I owe you, and do I have to fill out anything?"

# Out of Sync

By William and Milarde Brent

ILLUSTRATED BY JOHN HOLMGREN

He gave her a voice and a chance for stardom. She gave him insight into the heart of a girl

"Here comes the sound man," Brooks said, as Vic walked over. "Am I doing something wrong?" Wandra asked

VIC SLATER breezed into the sound department. He was feeling pretty satisfied with himself. He'd finished his picture the night before and everybody, from the director on down, knew it was the best job of sound recording to come off the lot in a long time. The Skipper had sent for him, and Vic was all set to take the big pat on the back.

Vic was a sound engineer or, in the language of the studio, a mixer. He had been a trouble shooter with the telephone company and what he knew about circuits and amplifiers he'd learned the hard way. He was big and rugged, and you couldn't tell, offhand, about the arm that had come in contact with twenty-two hundred volts on a high line. It didn't interfere with his work, but it was bad enough to keep him out of the Army.

"Hiya, Lou," he greeted the girl in the outer office.

Lou Mallory was the Skipper's secretary, but she was much more than that to the boys in the sound department. She gave out the routine assignments, listened to their troubles and settled arguments between the sound men and the production office before they got to the boss. She kidded with the gang and spoke their language, but Vic was the only one of the studio people she went out with. He took her to football games, prize fights, wrestling matches. He thought she was a good guy. If Lou's feelings about Vic were any different from his, no one knew it.

"His nibs in?" Vic asked.

"He isn't," Lou said. "Luckily—for you."

"What do you mean?" Vic scoffed. "After that Academy job I just turned in?"

Lou ignored this. "Apparently you've been fooling with the system again."

Vic frowned.

"Sawyer reported the circuit changed on the noise reduction unit," she said. "That mean anything?"

Sawyer was head of engineering and maintenance. He'd learned his decibels at Cal Tech, and didn't have much use for technicians without an academic background.

Vic swore softly. He'd forgotten to change the circuit back to normal on the channel he'd just turned in for checkup after finishing the picture.

"Sure," he admitted. "I made a slight change or two. But what the heck? I improved the recording, didn't I? I cut down the ground noise—"

"Yes, I know," Lou said patiently. "But when you've been in the business as long as I have, you'll learn to stay in your own department." Lou had spent five of her twenty-four years in the studio. "Besides, Vic, you know the Skipper's attitude about making changes in the equipment on your own. That's why we've got an engineering department. Any ideas you have must be taken up with Sawyer."

Vic knew how far he'd get with Sawyer, no matter how sound the idea might be. He'd run afoul of Brother Sawyer's smug superiority before.

"Listen, Vic—this is strictly off the record—but the Skipper's pretty sore about it. If he didn't think you were the best mixer in the department, he'd have fired you the time you altered the amplifier on the R.C.A. channel. It isn't that your ideas aren't good—it's just that he can't have the men tampering with the system on production. You're setting a bad example. If something goes wrong sometime and you gum up a whole day's work, there'll be the devil to pay with the whole department. Don't you see?"

VIC pushed his hat back and shook his head. "I give up. From now on, so help me, I won't even switch a P.E. cell without going into a huddle with engineering. I won't even—"

"Can the Skipper depend on that?"

"But definitely," Vic was emphatic.

Lou smiled and was about to speak, when the phone rang. She answered it. "Eleven o'clock?" She glanced at her watch. "Okay." She hung up and turned to Vic. "They want a sound crew on the test stage at eleven. You're the mixer. And I suggest you scramble over there before the Skipper comes back from the projection room and finds you here. I'll explain. Maybe by tomorrow he'll be cooled off."

Vic knew she was trying to give him a break; she'd square things in the meantime. She always did. "You know, Lou," he said, "sometimes I don't know why you go to all the trouble—"

"Maybe I wouldn't like to see you get fired," she said.

Vic grinned. "One good turn deserves another, pal. Tomorrow I'll take you to lunch—in the commissary. Not that forty-cent special, either."

"Okay," Lou grinned back. "I'll tie a red string

around my finger so I'll remember not to eat any fast in the morning."

Vic sat at his mixer console and checked the while the gaffer roughed in the lighting for the lot. Vic got the clash point of the light valve from his assistant outside in the truck, and slipped on to take a listen, after Peeler, his boom man, had the mike. He glanced at his volume indicator, test potentiometer positions for noise, then snapped mike. He gave Peeler the encircled thumb and for the okay signal and Peeler (Continued on p.

## Something the Axis Tanks Don't Have

**E**ACH time this newest and most powerful war machine of its type goes into action, it has an advantage that similar equipment of the Axis powers does not have.

For, in addition to superior design and quality of materials, it has the great advantage which Nature gave to the lubricating oils available to the United Nations . . . oils with *the quality and stamina* to lubricate better and last longer both in arctic cold and tropical heat. This is an advantage the Axis has failed to overcome by conquest or to achieve synthetically.

Today, Quaker State's four great modern refineries, using Pennsylvania Grade Crude Oil exclusively, are turning out large quantities of lubricating oils for the United Nations, to help maintain this advantage.

Quality oil is just as important for your car. Are you giving your car the advantage of Quaker State?

If not . . . why not change to Quaker State today? Quaker State Oil Refining Corporation, Oil City, Pennsylvania.

The fact that Marjorie Lawrence, a sufferer from infantile paralysis, could sing again at the Metropolitan is thrilling, but what is more important is her spirit, the unconquerable courage that has overcome the greatest handicaps and furnished an example of fortitude for us all

PHOTOGRAPHED FOR COLLIER'S  
BY W. EUGENE SMITH

**W**HEN Marjorie Lawrence woke up one morning in her hotel room in Mexico City and found that she couldn't move, her first reaction was exasperation. "I've never been sick a day in my life!" she cried furiously.

But at that moment, she was sick unto death with infantile paralysis, and although the Mexican impresario wrung his hands in misery outside her door, and the cast of *Die Walküre* (in which she had been rehearsing) waited hopefully, she was not to sing that night, and no physician would have dared guarantee that she would ever sing again. The primary concern of her doctors was to keep her alive, a task that seemed beyond them when the blow struck.

Eighteen months later, an audience at the Metropolitan Opera House cheered and applauded for five minutes when she finished singing the music in *Tannhäuser*. Nothing had been heard for years in the temple, and nothing like Lawrence's recovery had ever been known in music. The character of the part was to sing while reclining on a sofa, only about that phase of her life she was critical.

"In another year I'll be doing I did before," she says flatly. "a little bit now; I'll soon be over the place."

Lawrence (one always refers to her by her last name) is a faced woman with dimples and that makes the walls bend in her presence. She was born on a sheep station in Australia, has bounced about on her own, led an energetic life from her childhood and is thoroughly disgusted with being an invalid.

"At first it scared the dickens out of me," she says.

"Over here we say 'dickens,' the interviewer politely.

"Don't be a sissy!" shrieks Lawrence.

She receives her guests in a way and it is only during the course of conversation that one finds this is to a visitor. It is when one asks how she has managed to keep down (one does not mention it with a Wagnerian soprano) that comes out.

# THE VOICE OF COURAGE

Visiting her is like touring  
orks. She is gay and boisterous  
dynamic individual this inter-  
encountered in ten years of  
ebrities. Not content with be-  
s any other sensible person  
he is determined to be as good  
al production. As a matter of  
the New York critics are cruel  
who do not sniff easily at senti-  
rations—her voice is better

he first thing I did when I  
ed I wasn't going to die," says  
"I opened my mouth and gave  
Boy, that was *different*! I was  
rom my neck down, but you

know how crazy singers are. If they can  
sing, a leg or two missing doesn't bother  
them."

Her only regret is that two months were  
lost before she came into the hands of  
Sister Kenny with her method for treating  
infantile paralysis cases. According to that  
method, the first three weeks are all-im-  
portant. As is well known now, Sister  
Kenny is an Australian nurse who has  
revolutionized treatment for the disease,  
advocating massage and exercise rather  
than rest. Miss Lawrence went to her in  
Minneapolis and eventually lived in the  
same apartment with Sister Kenny.

"Just two Aussies acting proud—that  
was us," says Lawrence happily.

With Miss Lawrence was her husband,  
Doctor Thomas Michael King, an osteo-  
path, who learned the Kenny method di-  
rectly and brought Miss Lawrence back to  
New York, where he has been carrying it  
out faithfully since.

The original attack had left her entirely  
helpless, but the exercises soon had her  
lifting her arms, and when she could move  
the upper part of her body, she took a new  
resolution. She pointed to a straight chair  
by her bed and cried, "Get me out of here  
and strap me on that thing. I'm going to  
sit up."

They lifted her up, strapped her to the  
chair and then waited.

"You know what I want," she shouted.  
"Put me in front of the piano!"

That seems to have been the beginning  
of her real cure. Knowing that for a long  
time she would be able to sing only while

(Continued on page 59)

## WHAT'S YOUR GUESS?

WHY IS AMERICA SMOKING MORE—

as shown by Government figures?

## Smoking Less—or Smoking More\*?

*You're SAFER smoking  
PHILIP MORRIS!*

You see—this cigarette has been scientifically  
proved less irritating to the nose and throat!

Eminent doctors report, in medical journals that:

**When smokers changed to PHILIP MORRIS, every**  
**case of irritation of the nose or throat—due to**  
**smoking—cleared completely or definitely im-**  
**proved!**

We do not claim any curative power for PHILIP  
MORRIS. But this evidence clearly proves they are  
*far less irritating* for nose and throat!

So—you are safer smoking PHILIP MORRIS!

*And do they taste GOOD!*

**CALL FOR  
PHILIP MORRIS**

*America's FINEST Cigarette*

**"That shell had My Name on it  
— BUT I'M STILL HERE!"**

It's only a *dent* because his American-built tank had tough armor plate...the toughest in the world!

Back in the States—it was dunked, white-hot, into a new Socony-Vacuum quenching oil that helped to *make it* tougher.

Slabs of armor that sheathe U. S. warships, bombers and fighting planes, get the same treatment and come out tougher, too!

Helping to make America's war products the best in the world is a

part of Socony-Vacuum Friendly Service.

To that soldier boy in Africa extra protection from enemy shells is a very *real* Friendly Service. U. S. A.'s flyers know it, too—in the vast quantities of our 100-octane gasoline—new, more powerful fuel to hike them upstairs faster—give them utmost maneuverability!

And from our laboratories are coming new lubricants and cutting oils that are boosting armament pro-

duction—materials for explosives, plastics, rubber—and many other products which are invaluable to America at war.

In the hands of men who know, there's almost no limit to the good things that can be made from petroleum. The Sign of the Flying Red Horse stands for much more than just fine gasoline and oil!

# THE ARMY SPREADS ITS WINGS

BY ROBERT MC CORMICK

...s than twelve months  
Army Air Forces has  
...n from nothing into one  
... mightiest fighting out-  
...e world has ever seen.  
...is the story of AAF de-  
...ment. And bigger and  
...r things are on the way

NOT a doctor in the place would have bet a nickel even money on the chances of most of the 400 wounded American soldiers. The temporary hospital a short distance in from the African beach was out of blood plasma, and most of the wounded were in a state of shock that made it imperative. Communication lines were cleared, and for help went to GHQ. In a matter of hours (how many is another of the military secrets involved in any war) big C-87s, Liberator bombers converted for cargo carrying, settled down on the airfield near the hospital, and soldiers unloaded large wooden boxes. There was no secret about the contents. They were plainly labeled. Blood plasma. But eight of the wounded were saved. The plasma didn't come from the corner store. It came from the United States in less than two days. It was a trivial incident in the history of American military aviation, but it was a demonstration of the growth of the Army Air Forces. The AAF was created in 1941, but on March 9, 1942, it

became one of three equally powerful parts of the American Army. With the Ground Forces and the Services of Supply, it became semi-independent, and in its first year grew into one of the mightiest fighting organizations in the world.

It became a world air force, with bases speckled over the globe like pepper on a fried egg. Every line of it was designed around a central idea that it must have a positive part in destroying enemy resistance. It was patterned for bombing the heart out of the enemy, for subduing enemy aircraft, and for attacking enemy ground and sea forces. These things it would do, not in any one battle or one spot, but in all American battles wherever they might come.

The production of airplanes more than doubled, got up to better than 5,000 a month. The types of combat planes being manufactured were cut to less than a dozen, but each of these had a specialized purpose. Many got their first battle tests in the last twelve months.

Boeing Flying Fortresses and Consolidated Liberators shot and bombed a path of glory across the Southwest Pacific and in Nazi Europe, plunking explosives from great heights with incredible accuracy. The medium bombers—Billy Mitchells and Martin Marauders—flashed across battle lines at speeds close to those of enemy pursuit planes. The Billy Mitchells pulled an impossible raid on Tokyo, and the Marauders became torpedo bombers for the Navy in the Pacific.

Another light bomber, the Douglas Havoc, did a dozen different jobs, and terrorized the enemy in low-altitude raids across the English Channel, in night fight-

ing over Britain, in ground action in Russia, in Rommel's retreat, and in Allied movements against the Germans in Tunisia.

The Curtiss Warhawk moved along with British and American troops in Tunisia and Libya, holding its own against the enemy's best. The Bell Airacobra, a middle-altitude fighter, proved itself in Russia also to be a magnificent weapon against tanks. The Lockheed Lightning, one of our most-discussed fighters, went into combat in Tunisia and won out over the Germans' Focke-Wulf 190, and the famous Messerschmitt 109-F.

North American turned its Mustang loose over Germany, and it blossomed as a formidable scout plane. The Republic Thunderbolt, probably the fastest high-altitude fighter in the world, finished

Joe Jesus, "patty-cake man of the Sahara," molds oblongs of mud, camel and goat hair. They will be baked into bricks for airfield buildings along Uncle Sam's far-flung routes

lengthy tests and revisions, and was poised for combat. Development of the B-19 bomber, largest airplane in the world, was likewise completed.

Numerous cargo ships appeared, including the twin-engined Curtiss Commando, a fat-bellied freight ear of the air, and the four-engined Constellation, a graceful ship capable of carrying huge loads as fast as fighter planes could go a couple of years ago.

These ships appeared at bases in the

Caribbean, in Alaska, in Britain, at points all through the Pacific and Africa and the Middle East and India and China. A glacier was leveled off to make an airport in the Far North. An American engineer dropped by parachute into the middle of the Sahara, armed with a pocketful of money, rounded up native labor and built an airfield.

Other engineers in fur-lined suits parachuted into Arctic wilderness and, with tools dropped by chutes, cleared a space big enough to let a small plane in. The plane brought more tools, the clearing grew bigger, and larger planes came in until a complete airport was buzzing away in the heart of nowhere. And all through the tropics, men were hacking down jungle, laying out steel-mesh landing strips and setting up still more bases.

Between these isolated spots, grew up an AAF air-transport system that became bigger than all the prewar commercial airlines of the world put together. The Air Transport Command, a unit of the AAF, became larger than the entire Air Corps was before the war, and it flew more miles than all the world's airlines before the war. It stopped measuring distances in miles. India became 70 hours away, instead of 14,000 air miles; England became ten hours away, instead of 3,300 miles; Africa 40 hours, instead of 3,900 miles.

### Commuters in Transport Planes

Lieutenant General "Hap" Arnold, chief of the AAF, flew back from Australia in 35 hours and 53 minutes, compared with the conventional ship-sailing time of 33 days. The Air Transport Command shuttled great people around like suburban commuters. Mrs. Roosevelt flew to London and back, Madame Chiang Kai-shek flew here from China, Harry Hopkins flew hither and thither with loose-jointed freedom, the Harriman mission flew to Russia and back, Wendell Willkie moved all over the globe. The climax came when the President himself—who hadn't flown on a domestic airline since he took office—broke all the rules by letting the Army fly him to Casablanca to confer with Churchill. It wasn't simply a matter of picking the President up and putting him down. The Secret Service had to go first, high-ranking Army and Navy officers had to be taken along, and extraordinary protection had to be given each one. When Mr. Roosevelt did do away with precedent,

he did it in a big way, knocking off 15,441 miles in the air.

The Army, and civilians as well, got used to seeing young men in their twenties and early thirties wearing the eagles of full colonel. The youngest of these officers is Colonel Charles M. McCorkle of North Carolina, who was graduated from West Point in June, 1936, and became a colonel on November 16, 1942. He was 27 years old.

New training schools turned out quantities of at-home pilots, navigators, bombardiers, gunners, ground crews, mechanics, radiomen and all the other specialized personnel necessary to such a gigantic business. Wright Field erected a building big enough to test 40-foot propellers; aircraft engines of more than 2,000 horsepower appeared; swanky hotels were taken over at Miami Beach, Atlantic City and Chicago to house AAF cadets in training stretches of desolate land in all parts of the country were set aside as bombing range emergency landing strips appeared along American highways.

American parachute troops were flown nonstop 1,500 miles from England to Africa; troop-carrying gliders were developed; General Kenney moved enough supplies and troops into New Guinea to enable the American forces to start a hammering offensive at the Japs—and almost all of both men and material went by air.

AAF officers took over control of large sections of the entire Army. Lieutenant General Frank Andrews headed up the European theater of operations; Lieutenant General George Brett took over the Caribbean Defense Command, Major General Lewis Brereton assumed control of American forces in the Middle East, Lieutenant General Millard Harmon became commander of the Army forces in the South Pacific, and Lieutenant General Delos Emmons was made boss of the Hawaii Department of the Army. The rise of AAF brass hats to powerful positions inspired a standard gag that the campaign for a separate air force should be changed into a campaign for a separate ground force.

That's part of what happened in one year. Next year will be better—and bigger. The AAF has planes on the way, now secret, that will make our best seem silly. The AAF will have bases in countries we can't even think about now. The second anniversary will really be exciting.

THE END

"I've laid out your pipe, robe and slippers. Now will you hang some pictures for me?"

# On this, our 75th Birthday...

**T**ODAY, our country is at war—engaged in a desperate struggle to determine whether the freedom we have created and cherished shall survive or perish.

Beside the all-embracing immensity of that issue, the Diamond Anniversary which Metropolitan celebrates this month is of small importance.

Yet, on our 75th birthday, it is perhaps proper that this company, representing nearly thirty million policyholders, should here voice its faith in the future, and its determination to help make that future brighter than any period in the past.

We have just reason for that faith. Ours is a business that has been built on faith—faith in the continued and growing greatness of our country, faith in the integrity of our people.

In the 75 years since Metropolitan was founded, on March 24, 1868, we have seen America face crisis after crisis—wars, panics, depressions, disasters of many kinds . . . and from each such crisis we have seen this country emerge stronger than ever. We confidently believe that America will do just that again—that the best years of our history lie before us.

We have every reason, too, for our determination to help make that future brighter. No busi-

ness, perhaps, touches the lives and aspirations of millions of people more closely than ours. It is our plain duty to do our utmost to help those people fulfill their dreams—of an education for their children, of security for their families, of financial independence in their own old age.

In the past, we have tried to perform that duty through the wise investment of more than six billion dollars which we hold for the benefit of our policyholders. We have tried to do it through conscientious, economical management, so that insurance costs would be held to a minimum. We have tried to do it through the prompt payment of all benefits—which, in the 75 years of our existence, have totalled over nine and a half billion dollars. And through our organized health activities, established in 1909, we have tried to make every possible contribution to healthier, longer lives for our policyholders—lives which, taken from birth, now average over twenty years longer than they did in 1868.

In doing these things, we have also tried to be a good citizen. For we are part of America. Her future is ours. And in this critical hour of her history, we say again—our faith in her future has never been stronger.

75th ANNIVERSARY 1868-1943

# Maybe there's a blank spot in your diet

SURE you're tired when you get home at night! Can't expect to switch from easy-going peacetime occupations to all-out war work and not feel it.

But—

Maybe it isn't all in the extra work you're doing. Maybe you're done-in at night because you *haven't fitted your diet to the times in which you live.*

Just look:

A man at work on an active factory job requires much more energy than one sitting in an office all day. Such extra energy *has to come from something you eat.*

A change to more active jobs calls for eat-

ing more of the good, solid, substantial, high-energy foods like bread. Basic foods that give you something to go on.

So, eat more bread. Maybe there's a blank spot in your diet.

Try eating a few more man-size slices every day, as so many people are now doing. Try using it to make hard-to-get foods stretch, as illustrated in the panel.

And remember the difference in white bread that bakers are providing today. It's enriched with Vitamin B<sub>1</sub>, niacin and iron—like the white bread the armed forces serve their men!

## MAKE HARD-TO-GET FOODS GO FURTHER

RATION-EASING RECIPE No. 2 • MEAT BREAD LOAF

- |                                      |                                      |
|--------------------------------------|--------------------------------------|
| 1 large loaf of Enriched White Bread | salt, pepper                         |
| 1 medium-sized onion, chopped        | $\frac{1}{4}$ teaspoon ground ginger |
| 1 tablespoon fat                     | summer savory                        |
| 1 cup cooked ground meat             | 1 tablespoon minced parsley          |
| $\frac{1}{2}$ cup gravy              | soft butter or margarine             |
| 1 cup tomatoes, strained from juice  | 2 eggs                               |
|                                      | 1 tablespoon milk                    |

Cut all crusts from loaf of bread.\* Cut slice from top about  $\frac{1}{2}$  inch thick, to make a cover. Scoop out crumbs from inside, leaving an edge  $\frac{1}{2}$  inch thick at sides and bottom. Cook onion in fat; add bread crumbs. Heat meat with gravy, tomatoes and seasonings; add bread crumb mixture and parsley. Add 1 egg beaten slightly. Spread soft butter or margarine on outside of loaf; put in meat mixture. Beat the other egg with the milk. Moisten top edge of loaf with this mixture; put top slice on as a cover. Moisten the top with remaining egg and milk. Place on baking sheet; bake in moderate oven at 400° F. until brown. Serve hot in slices. 10 servings.

\*Save crusts; dry thoroughly then grate and use crumbs in croquettes, etc.

## MOST GOOD BREAD IS MADE WITH FLEISCHMANN'S YEAST FOR REASONS SUCH AS THESE:

1. Fleischmann pioneered the methods of yeast manufacture which make possible the uniformity, potency and dependable quality not only of Fleischmann's Yeast, but virtually all others as well.
2. More than 400 different strains of yeast, selected from thousands gathered all over the world, are kept under constant culture and study in Fleischmann's laboratories. This assures bakers of the yeast best suited to American flours, methods and conditions year after year.
3. Fleischmann research on vitamins brought about the yeast method of enriching bread with Vitamin B<sub>1</sub>.

the station concourse with what to be half the town looking on. "A deserter!" "I!" cried Mr. Herzog indignantly. "F." Whereupon, the sergeants hit him with a bang and demanded a card. This proved his point and hit him with some disgust, saying, "In pretty good for a wreck."

her wrecks lately have been New taxi drivers who have also been trying to do the right thing, with some of their usually even tempers. The war has reached when the government has banned pleasure driving. When a friend asked our favorite driver the other day politely, "Is this a pleasure car?" And she yelled, "Mind your own business!" and climbed in. "What was I to do?" he asks bewilderedly. "Get her out?" The answer is, for all patriots, yes.

That's nothing to our trouble with. Not long ago we published an article about the benefits of raising Angora rabbits—The Rabbit Goes to War—Merley Alexander. Almost instantly hundreds of our readers decided to go into the business of raising the creature and live happily ever after. After a hundredth letter asking how one went about it we stopped counting. It was just an innocent guy buying a couple of rabbits and trying to keep up with what was going on. But now comes a letter from William H. Webb of Los Angeles, secretary of the California Angora Wool Growers, Inc., and, alas, we feel bound to tell you that Mr. Webb didn't like the piece. Says it contained several major in-

accuracies. We can't go into it all but he contends that any rabbit which produces no more than one and a half or two ounces of wool per shearing is practically bald. If an average Angora rabbit doesn't grow from three and a half to five and more ounces, says Mr. Webb, it is eaten by the owner (not necessarily in chagrin either) or sold for *hasenpfeffer*. Furthermore, he protests Miss Alexander's contention that an honest rabbit's gestation period is from thirty-nine to forty-two days. He says that it is about thirty-one days—or less. We publish this merely that you be on your guard against birth control of rabbits or rabbits with scanty locks and no ambition. If we and Miss Alexander have started you on a rabbit career we think it wouldn't be a bad idea to write to Mr. Webb before going too far. We have only one more communication on the subject and it is to Mr. John B. Gennaway of Portland, Oregon, who wants to send us a couple of rabbits. Until proved otherwise, we can only regard Mr. Gennaway as an enemy.

IT WOULD be hard to match the exultation of a friend whose great Dane has just been accepted by the Army unit K9. Somebody called from the camp to inform our friend that the Dane, Herbert, had arrived in good shape and was in training. Our friend got halfway out of his chair and yelled back into the phone, "How is he? How's he doing? Is he making good?" There will be a two-minute wait while we change reels. The next scene is in the White House, with the President decorating our friend for something heroic Herbert has done. "Will you accept this engraved bone with my compliments?" the President will be saying. . . . K. C.

"Do you have to put your brick right over the most interesting part of the news?"

## It's the Men who make the Erie!

**L**OOK in on any one of Erie's 47 coast-to-coast service offices and you'll find men knee deep in other people's problems.

"Service" has always been the business of these traffic men. Today they are service men and wartime expeditors, too.

In war or peace their job is the same—helping to move goods faster. They work with shippers preparing routings, assisting on loading and packaging problems, securing the necessary types of cars, providing information on the location of cars of vital materials in transit, interpreting government rules and regulations, and a dozen and one other jobs necessary to a nation on the move. Because of the efforts of these men traffic is moving swiftly and safely.

To anyone having a transportation problem—trained Erie men in the field plus many more in the general offices offer a helping hand.

AMERICAN RAILROADS AT WAR

**THE RAILROAD OF HELPFUL SERVICE**

climbed down and ambled over to the mixer and sat down on a film magazine case.

"Who're we testing, Peeler?" Vic asked.

"Some dame," Peeler said. "Hope to heck she knows her lines so we can get out of here. I gotta date—with my draft board."

Then Vic saw her. She came in with George Ellis, the test director. As a rule Vic didn't go for movie-struck girls. Rubbing elbows with them on sets had made him wary. Most of them were interested mainly in meeting some big shot who might further their careers. And they all looked the same—wide-eyed, fixed smiles and shallow, vacuous expressions.

But this one was different. It wasn't just her looks—she had a sleek, blond bob, a cool half-smile and eyes with depth and a hint of secrecy; and her figure was perfect.

Vic turned to the assistant director. "Who is she?"

The assistant director shrugged. "Some model from New York," he said wearily. "That's all I know."

That would explain her poise, Vic thought. He found himself pulling for her.

She was talking to the director when Ronald Brooks came on the set and joined them. Brooks was a Santa Barbara socialite, who'd been discovered at the Pasadena Playhouse. The studio was grooming him for big things. So far he'd only played bits and small parts, but he'd done pretty well for himself otherwise. There wasn't a stock girl on the lot he hadn't dated, and the extra girls had a name for him—wolf in Brooks' clothing.

"Okay," the director said. "A complete rehearsal for the camera and sound—then we'll shoot it."

Vic slipped on the cans and signaled for Peeler to gun the boom out and tip the mike to favor the girl. Brooks was only in the scene for the ride. They took their places.

"All right—action," the director said quietly.

The girl made her entrance, but the minute she went into her speech, Vic knew something was wrong. She read her lines well enough, but when her voice hit the mike her essses and other sibilants hissed and spit like little steam valves popping off.

"How's for sound?" the director asked, when the scene was finished.

**V**IC took off his receivers and went over. Quietly, so the girl couldn't hear, he explained about the hissing. Maybe the trouble was in the system. He'd like another rehearsal. Vic told Peeler to change mikes and buzzed Winnie, outside, to slip on a new light valve. But all the time he was convinced the trouble was in her speech, because Brooks' voice came through normally.

Vic walked over to the girl. "Here comes the sound man," Brooks wisecracked to her. "One of the necessary evils of picture making."

"That's right," Vic said. "Just like actors."

The girl smiled a slow smile. "Am I doing something wrong?"

"It's all right," Vic said easily. "Just don't talk directly into the mike."

He noticed the scar on her upper lip, barely perceptible beneath the panchromatic make-up. He wondered about it. Odd, he thought, that her voice should be normal, until it came through the system. He heard two buzzes, indicating Winnie had changed valves and was ready. Vic went back to the mixer, hoping the trouble had been in the system, but certain that it wasn't.

He slipped on his headset. "Okay. The second rehearsal was just the sibilants were still there."

"How about it, Vic?" the director asked. Vic knew there wasn't anything he could do. Might as well shoot it. It wouldn't pick up as badly as he was hearing it through the headset. He signaled Peeler to raise the mike slightly while the girl talked.

"All right," Vic said. "Let's make a slate for the take number and Vic, the girl's name: Wandra Pollock. He wondered if it were her own. It fitted her."

**T**HE next morning they ran the test. The sibilants were even worse, coming out of the loud-speakers. When the light came on, Ed Willis, the casting director, told Vic what the trouble was.

"I don't know," Vic said. "It's so perfect in her speech—the way she talks."

"What's the answer, then?"

"Well," Vic said, "a network microphone designed to filter out the hissing. It works, and again it might not."

Willis dismissed the idea. "She's not that important," he said. "Too bad," he added. "This girl's the type for a picture we've got, called Boy Loses Girl. The studio wants to make it with a couple of knowns."

"Look," Vic said. "I could take over with the Skipper. Maybe engineering could work out something."

"Forget it," Willis said. "It's easier to find another dame—who can talk."

There was nothing more Vic could do. They all filed out.

**I** KNOW I've gained pounds," Lou leaned forward for Vic to light a cigarette after-luncheon cigarette.

"Well, you are kind of expensive to eat at that," he said. "But maybe it was worth it. I bumped into the Skipper this morning, and he wasn't sore at all. In fact, he never mentioned it."

"I convinced him you wouldn't be back with the channel again. I even crossed his heart."

Vic grinned. "How about a date tonight? We can have dinner, then the fights at Ocean Park."

"I'd like to—but call me later. I have to work overtime to get out equipment reports. Okay?"

"Okay." But he was looking at the girl who had just come in.

She had on a light gray gabardine and a rolled-up sombrero that matched the color of her eyes. She looked better, Vic thought, than she had on the test stage. Lou turned around and lowered his gaze.

"That's Wandra Pollock—the girl we tested yesterday," Vic explained. "It isn't any justice," he went on, thoughtfully. "Ninety-nine out of a hundred 'em haven't got a thing—you know, the minute they step in front of a camera. Then along comes a girl like this, and she happens? Something about the way she talks louses up her speech and chances."

It was too bad, Lou agreed. "But on the other hand, maybe it isn't. She can forget pictures. Chances are she's better off in the long run, anyway."

Wandra saw Vic's eyes on her and straight to their table. "I hope I'm not intruding," she apologized, smiling fleetingly at Lou.

"Not at all," Vic said heartily.

The girl hesitated a moment. "Mr. Willis just told me about my test," she addressed Vic. "He suggested I see you."

He pulled out a chair for her, and she sat down. Vic introduced her to Lou.

# Lift up your eyes to something good

**O**VERHEAD you hear the steady, reassuring drone of mighty engines.

You look—and drawing its sure beeline across the sky is a giant bomber with four engines and twin rudders, evidence of America's growing air might.

You won't see that sight as often as our fighting men do, or our enemies. Most of the B-24's being built in this country promptly move overseas where they can do the work that gives them their name, the "Liberator."

But watching their record on the fighting fronts, we're mighty proud to have had a part in putting this big ship in the air, for the "Liberator" is powered by Buick-built engines.

Buick skill, Buick precision, Buick craftsmanship built the Pratt & Whitney engines that pull those wings through the sky—and are building plenty more every month.

But that isn't the important thing. What counts is—those engines are there—those planes are there—and have been for months.

And we'll leave it to you to judge, from what you read about the B-24 "Liberator," if they aren't doing the kind of job you've come to expect of Buick.

ou'es traveled over her quickly, ap-  
 airily, in a single, comprehensive  
 ance.  
 Vic wished that Willis had explained the  
 uation to the girl, instead of passing the  
 ick.  
 Lou glanced at her watch. "I've got to  
 back to the office. I'm late, as it is."  
 g up abruptly.  
 ose too. "Don't bother, Vic. I can  
 way back," Lou said. "Thanks  
 lunch. By-by."  
 at down, after Lou left the table.  
 d Wandra a cigarette, but she  
 her head. "About my voice . . ."  
 an.  
 face clouded. "Well, here's what  
 es . . ." She listened while he ex-  
 in detail. "Frankly," he finished,  
 know what the trouble is—except  
 there."  
 truck him again that her voice  
 ed normal enough, not coming  
 the system. He found himself  
 g the scar on her lip.  
 the way," he said. "If it's not too  
 al—what about that scar?"  
 automobile accident," she ex-  
 "A piece of glass punctured my  
 tongue. It took several stitches.  
 you ask?"  
 t could be the cause of the trou-  
 Vic said quietly. "In fact, I think  
 n't anything be done?" she im-  
 "I mean with the sound appara-  
 Mr. Willis said maybe you could  
 something."  
 hnically, it's possible," he told her.  
 those things—filters, we call them—  
 ky. They have to be designed to fit  
 individual's own speech deficiency.  
 works with one voice, in most cases,  
 eective with another."  
 brightened a little. "Then it's not  
 her hopeless? I mean, there might  
 nance . . .?"  
 hesitated, but he knew it would be

kinder to tell her the truth. "Well, yes, if  
 you were a stage star, a big name, some-  
 one the studio had invested a lot of money  
 in. But—" He spread his hands.

She was silent for a long moment, pon-  
 dering this. "Well, that's that, I guess."  
 Her voice was heavy with bitterness.

He wanted to say something that would  
 soften the blow, but for the life of him he  
 couldn't find the proper words.

She picked up her bag. "Can you tell  
 me the best way to get to Hollywood?" she  
 asked.

"Better than that," he said. "I'll take  
 you. I'm going in."

She smiled her thanks.

That night Vic took her to the Ice Ca-  
 pades.

VIC didn't remember that he had prom-  
 ised to call Lou about dinner and the  
 fights, until he walked into the office next  
 morning. "Gee, Lou," he said. "I'm sorry  
 about last night. I—"

"It was all right," she made it easy for  
 him. "I had to work, anyway."

Vic had a feeling that she hadn't. "We'll  
 do it—soon," he promised.

But they didn't. Vic was too busy with  
 other things. Wandra had a three-months  
 contract, and they used her on dress sets  
 as atmosphere and sometimes she did  
 small nonspeaking bits. Vic took her to  
 lunch, when she was on the lot, and then  
 drove her home in the evening, often stop-  
 ping off some place for dinner and a show.  
 It wasn't long until the whole department  
 was ribbing him about his glamor girl—  
 with the exception of Lou. She didn't say  
 anything.

One night, after seeing a picture, Vic  
 and Wandra drove up to her apartment  
 house on Ivar. She didn't make any move  
 to get out.

"You know," she said, after a time,  
 "I'm beginning to like California. I'll be  
 sorry to leave."

"Leave?" He didn't like the thought.

"I'm going back to New York."

"But why?" he said. "Your contract's  
 not up for a couple of months yet. Why  
 not make that extra money?"

She shrugged. "All I'm doing is glori-  
 fied extra work. I don't like it. If I can't  
 go first-cabin, I don't want anything to  
 do with pictures."

"But I don't want you to go," he said  
 quietly, speaking his thoughts aloud.

She looked at him for a long moment,  
 her face barely seen in the dim glow from  
 the blacked-out street lamp. "Can't you  
 understand?" she cried. "It isn't as though  
 I'd had a real chance. I can act—I know  
 that. And I photograph. If someone  
 could only do something about my  
 voice—"

He tried to comfort her. "There's no  
 need for it to ruin your life, Wandra."

"Oh, Vic, don't you see how I feel?"

She moved toward him ever so slightly,  
 and his arms went out and around her.  
 She lifted her face, and Vic kissed her for  
 the first time.

When he left her that night, he was har-  
 ried with conflicting thoughts. He knew  
 what he'd be letting himself in for if he  
 carried out the idea that had come to him.  
 Nevertheless, by the time he reached  
 home, he'd made up his mind. He called  
 his ex-chief at the telephone company.

THEY were winding up another picture.  
 When the company broke for lunch,  
 Vic carefully unwrapped a small box, with  
 two dials on one end, a short cable and  
 plug protruding from the other. He  
 plugged it into the speech circuit inside  
 the mixer console, then buzzed Winnie,  
 outside in the truck, to send Wandra in.  
 She was waiting. He told Winnie to stand  
 by for a while, but actually he had little  
 hope. The whole thing had presented dif-  
 ficulties from the beginning.

First he'd taken Wandra down to the  
 telephone company lab, which his ex-boss  
 had allowed him to use on Sundays. He  
 had run a curve on her voice. Then he had  
 measured the overload frequency of the  
 sibilants on the oscillograph. His job then  
 was to design and build an eliminator net-  
 work or filter that would reduce the tone  
 of the sibilants to her normal voice level.  
 The filter, of course, had to be adapted to  
 the studio recording channels. Then he'd  
 gone to work laying out the circuit.

Wandra was excited, but he had told  
 her not to build up her hopes. Suppose  
 his filter did work? He'd have to angle  
 around then to get her another test, which  
 wouldn't be easy. Once the studio lost in-  
 terest in a prospect, there was little chance  
 to revive it. There was one thing in her  
 favor, though. They were still looking for  
 the girl for Boy Loses Girl. There were  
 other factors, too, which he didn't men-  
 tion: the Skipper, and his own job, which  
 he might well lose if anything went wrong.

Wandra came in and Vic hustled her  
 over to a set, where a live mike was rigged  
 on a boom. Then he hurried back to the  
 mixer, set the condenser at 6,000 cycles—  
 the overload point as shown on the oscillo-  
 graph—clamped on the cans and signaled  
 her to begin.

"Scarlet Sister Sally sallied forth and  
 said so and so to Zornia. . . ." She read the  
 lines flatly and without interest. She'd  
 gone through the same performance at  
 least a dozen times and was pessimistic  
 about the whole thing.

Slowly he twisted the tuning dial and  
 suddenly, at 6,500 cycles, the sibilants van-  
 ished almost to complete inaudibility. He  
 told Wandra to keep on talking and gave  
 Winnie the "roll 'em" signal and ran off a  
 hundred feet of sound track.

Wandra came over. "Well," she said,  
 "same old story, I guess."

Vic held back his excitement. "Don't  
 know yet. Can't tell until I hear it on the  
 screen. Come on, we've got time to grab a  
 sandwich. . . ."

The next morning Vic was waiting at the

## Study This Picture

### IT REPRESENTS FREEDOM.

It represents our liberty to do those things we choose to do—to buy, with our earnings, the comforts that appeal to us—and to enjoy them as we will.

It represents the American way of distributing fine things with equality. The factory watchman, the mill super-  
 intendent, the millionaire yachtsman—all may and DO drive the same model Sea-Horse. All enjoy the same perfec-  
 tion of performance.

It represents the things which will be ours again when the war is won. In the meantime there is work for us to do.

For our part, we have stopped the production of outboard motors for civil-  
 ian use. We are working (harder than we ever have before) on certain war items for which our experi-  
 ence in building pre-  
 cision products has fitted us.

All to the end of winning the earli-  
 est possible victory—so we can get back to those things we hold dear—including golden hours on the water.

loading room when the "dailies" arrived from the lab. He separated Wandra's sound track from the other stuff, hurried to the projection room and asked Slim, the projectionist, to run it before the others arrived.

Vic sat nervously waiting, while Slim threaded up. The lights blinked for the "here we go" signal, and the screen was blank, except for the horizontal lines of the sound track. Vic leaned forward. When Wandra's voice hit the loud-speakers, the hissing was gone! Not completely, but there wasn't enough of it left for anyone to notice. Her voice, too, had taken on a new quality—full and rounded. Vic suppressed a desire to yell.

Ed Willis wouldn't be in for an hour yet, but Vic took the film to the casting director's office and left it with a note. Later, Willis came on the set.

"What happened to that girl's voice?" he asked Vic. "I just ran the track. It's swell."

Vic hedged. "Just a little trick I learned about recording it, that's all. Think maybe she'll get another test?"

"Think nothing," Willis said. "It's all set."

That afternoon Vic called the sound department. "Look, Lou," he said. "I want to see you before you go home. We're finishing tonight and may work till after six. Mind waiting in the office?"

"All right," she said. "I'll be here."

When he walked into the office, Lou was alone. "Hiya, gal." The lights were out in the Skipper's room. "Everybody gone?"

Lou nodded. "It's seven o'clock," she said.

"I'll make it up to you," Vic grinned. Then, suddenly, he was serious. "Look, Lou. I've never asked for an assignment before, but I'm going to now."

"This is unusual," she said. "It must be terribly important."

Vic looked at her. "It is."

She waited for him to go on.

"They're testing Wandra for Boy Loses Girl. I want the tests, Lou, and the picture—if she gets the part."

He found Lou's eyes studying him. "Can we be frank with each other, Vic?"

"Sure. Why not? Haven't we always been?"

"Your personal affairs are your own. Don't think I'm trying to interfere—but I'm still your friend, Vic. And I don't want to see you get out of sync in a situation which might involve you in trouble—in more ways than one."

He wasn't certain of her meaning, but he was positive she didn't know about the filter. "I'm afraid I don't understand Lou," he said.

"Let's put it this way, then. Do you think you're playing fair with the picture?" Her voice was cool and sustained, but there was disappointment in it, as if she felt he'd let her down.

He should have known he couldn't do anything over on Lou. She was too smart. She knew, or suspected something, there—in her voice, the way she was looking at him.

"That's your business, too," she said. "But I don't like to see you get your circuits crossed and make a fool of yourself."

He felt himself tightening up. "What do you mean by that?"

"All right. I'll be more specific. You're not new in the business, Vic. You've seen these things happen before." She shrugged. "In this case, it just happened to be a deficiency—and you happened to be a good sound engineer. Do I make it clearer?"

He knew she had not liked Wandra from the beginning, but he hadn't thought she'd be vindictive. He felt both surprised and angry. "Listen, Lou, maybe that's all. Maybe you've been in the business long. You're getting cynical."

"Maybe," she said. "And maybe I'd better take my own advice and stay in my own department." She bit her lip. "Let's just skip the rest of it, and let it go. That's that." She picked up her assignment and glanced over it. "Al Green's out of a job, but I can switch him to some other place. The assignment's yours, Vic."

"Thanks, Lou," he said.

HE WALKED out of the office. He had got what he came for, but, somehow, he didn't feel very happy about it.

Boy Loses Girl, with Wandra Poole and Ronald Brooks, got the starting line. Vic's worry now was that the filter might go haywire on production. Then he had to learn the lines, cuing himself to cut the filter in when Wandra spoke, then switching it off immediately to avoid distortion in the other voices. Sometimes he made a mistake and had to call for another take on a trumped-up pretext.

When the company folded each day, he locked the filter in the glove compartment of his car to avoid the possibility of engineering's finding it in the console. Willis and Peeler, naturally, were in on the secret, but he knew they wouldn't talk. He

# The "Miracle Homes" of Tomorrow

## will be owned by families of average means

## with WAR BONDS PUT AWAY TODAY!

OUT OF A WORLD AT WAR, a new America is being born! To speed victory, our nation's industry is leaping years ahead overnight—creating new marvels that will bring fabulous riches in living to the average American family when peace is won.

Among these will be your "Miracle Home" of Tomorrow. You may prefer it ultra-modern in design, or charmingly traditional in its lines. Whichever you choose, it will be a finer home than has ever been known before. It will set a new high in livability, a new low in cost.

Located far from noise, dirt and congestion, it will

be a true haven of peaceful, healthful living. Electrical servants not even the wealthiest have today will lighten every household task. Winter's chill and summer's heat will be barred by amazing climate-proof construction. Manufactured weather will duplicate the uniform, healthful comfort of a delightful June morning!

These are not dreams, but realities now being born on the drawing boards and in the laboratories of America's building industry. Through cooperation by architects, contractors and

building craftsmen they will revolutionize every phase of building design, materials, construction and cost. And financing plans will be so liberal that owning your home will be as easy as buying a car!

To make sure of a "Miracle Home" for your family invest every possible dollar in War Bonds now. Earn mark them for the down payment—and put them away. Today, they buy some soldier the world's best fighting equipment. Tomorrow they'll buy you share in the new and greater America now in the making.

**Free!** "A Portfolio of Designs for Better Living." Describes in fascinating detail the "Miracle Homes" of Tomorrow where Mr. and Mrs. Average American will live after the war.

"Miracle Interior" provides movable walls, clothes closets, pantry and service cabinets. You will be able to change size and shape of rooms at will, to meet changing needs through the years. Built-in furniture units of modern design will give rooms charming individuality and greater usability. Barbecue fireplace for outdoor fun will be built right into a wall of the spacious front porch. These are typical of many innovations for undreamed-of new livability.

### But right now . . . don't neglect your present home

**BE SURE  
YOUR ROOF  
IS IN GOOD  
CONDITION**

The roof is your first line of defense against sun, rain, ice and snow. If it is defective, repair or replace it at once. Ask your Celotex Dealer about doing the job with Celotex Roofing or Celotex Triple-Sealed Shingles. They give extra years of protection and beauty without extra cost. Choose from a wide range of handsome designs and attractive, permanent colors.

**INSULATE  
TO SAVE  
VITAL FUEL**

Conserving fuel is important to winning the war. Making it go farther and heat every room more efficiently is vital to your family's health and comfort. Celotex Rock Wool Products can make your fuel go 40% farther, keep every room in your home warmer in winter, also delightfully cooler in summer. Consult your Celotex Dealer—he has the facts.

**MAKE  
WASTE  
SPACE  
USEFUL**

Dreary attic or basement space can easily be transformed into rooms for added comfort and extra revenue from housing a war worker with the help of Celotex Insulating Intero Finishes. Also with White Rock Gyp Wallboard—a good-looking, fire-proof material which can be beautifully painted or papered. Ask your Celotex Dealer.

re, that Lou's suspicions were simple and nothing more. The rushes were coming through fine, and he breathed easier as the picture went on. Wandra was "in." Already the writers were shaping up a follow-up for her and Brooks. He didn't see much of Wandra now, except on the set. What with lines to learn, dress fittings, portrait stills and all, he didn't have time. Too, the publicity was in a lull, and hardly a night went by that he didn't attend a preview or an after-party or a Russia party or a China Relief benefit or something—with Ron Brooks. It was simply a part of the job, Wandra explained, and Vic, besides, understood those things. Nonetheless, it bothered him.

Why did the love scenes the last day of the picture. Wandra and Brooks put into them more than the script, or the office, called for—or so it seemed to him. He found himself not liking this at all, and he must have shown it because he said he was acting like a high-school kid. It didn't help matters any.

They were changing the setup, moving the cabin living room into the hall for the last sequence. Peeler wandered over and leaned idly against the console. "You know, Vic," he said, "you're a good guy, and I like you—but in some ways you're not quite bright."

"Anything back of that?" he said angrily.

"All in the way you look at it," he said. "What do you mean?"

"Well, Sister Pollock's on her way up and you're still a sound man."

"I think that comes under the heading 'business,' Peeler."

Peeler shrugged. "Right you are, Bub. You're still a chump to kick a lot of stuff away for a tomato like Pollock, and miss up a girl like Lou."

"What? What's Lou got to do with it?" Peeler looked at him pityingly. "You dumb." With that he walked back into the living-room set.

Peeler sat there, furious. He came out of the living room, holding his "gin pole," which he used in the setups. He removed the mike and hung it back on his boom. "Gimme a listen," he yelled from the set.

Peeler moved to position number two. Without looking up, Vic slipped on his hand and snapped on number two switch. He twisted the pot automatically to normal. What he heard coming through the phone was Peeler's familiar, "1-2-3-4, hello, but Wandra and Ronald Brooks are sitting quietly together."

"But, darling," Brooks was arguing, "just because this sound monkey fixed up your voice doesn't give him an option on you."

"I know," Wandra said. "But I can't just come right out and break it off cold. After all, there is my voice to think about—even if I do love you, Ronnie. Don't be impatient."

There was more. The blood drained out of Vic's face as he listened. Then the assistant director was calling the principals on the set. Vic saw Wandra and Brooks come out of the living room. His mind was a turmoil, but he remembered the mike concealed near the lounge in front of the fireplace, to pick up part of their dialogue from the preceding scene. In the rush, Peeler evidently hadn't taken time to disconnect it.

"My mistake, Vic," Peeler yelled. "It's number one position. Gimme another listen." Peeler sounded innocent enough—to innocent—for he was too old a head to make such an obvious mistake. The answer was plain. Vic knew now that Peeler, who didn't miss a thing, had done it deliberately.

He went through the motions on the final sequence. He no longer cared whether the sound came through or not. All he wanted was to get out of there.

Then they were rolling on the final close-up. "Print it and wrap it up!" the director shouted, when the scene was finished.

Vic walked off the set without bothering to turn off the system. He left the lot and drove around aimlessly. When it got dark, he parked on a little-traveled road above Sunset. Well, he thought cynically, he had to hand it to Wandra. She was an actress, all right. She'd given a better performance for him than she had in the picture. It all added up now. As Peeler had said, he was too dumb to see. He'd been too dumb to see a lot of things. Lou, for instance. He had taken her for granted. . . .

He stuck a cigarette in his mouth and searched for a match. Finding none, he opened up the glove compartment. There was something missing. He realized with a start what it was. The filter. He'd left it plugged into the console! The channel would be back in engineering by now. Well, this was it—his job, Lou, everything.

"So, Slater," he said aloud, "you ought to feel proud of yourself. For a guy who thinks he's half smart, you've certainly made a good job of gumming up the works."

He stepped on the starter and headed toward Hollywood. . . .

The telephone waked him late the next morning. His head was as big as a barrage balloon and his mouth felt as if he'd eaten a bale of hay. He knew who it was before

Lou's voice came through, crisp and efficient.

"You'd better come in as soon as possible," she said. "The Skipper wants to see you."

Vic drew a long breath. Might as well face the music and get it over with. "All right," he said. "I'll be in."

Lou wasn't in the office when he arrived. He'd never realized before how empty everything would be without her. He walked slowly across the room, to the Skipper's door.

The Skipper looked up from behind his desk, then waved him toward a chair. The Skipper leaned back, regarding him, as though wanting to see what Vic had to say for himself. On his desk was the filter, the two dials, like big eyes, staring at him accusingly.

Vic cleared his throat. "Well, Skipper—I guess you know all about it."

The Skipper nodded. "You must have done a pretty good job with your home-made gadget, remembering what that girl's voice was like."

Vic wished the Skipper would get it over with quickly. "I'm sorry, Skipper—about going behind your back. I was all mixed up—about a lot of things."

THE Skipper picked up the filter and studied it. "It might seem odd that you should be censored at all—considering that you've made us a present of a new leading lady. This gimmick is going to be a mighty important asset—to Miss Pollock, at least." He put it down and looked at Vic squarely. "But I can't run my department that way."

"I understand that, Skipper."

"You're a good man on production, and I hate to lose you, but I can't let my mixers run wild with the equipment."

"I don't blame you, Skipper."

"You might have difficulty getting into another studio. I'd have to tell the truth about your apparent inability to keep from redesigning the recording channels."

Vic didn't say anything. He'd thought about that, too.

"But you're too good a man for the studio to lose altogether. It seems to me that your talent for experiment should be put to some use."

Vic stared at him.

"Sawyer's going to Anacostia to take charge of a naval school. I'm putting you in charge of engineering, where you can tinker all you please!" The Skipper was grinning.

"Skipper—I—"

The Skipper brushed it off. "Now get out of here, I'm busy," he said. "And go thank Lou—she suggested it."

Lou was pounding briskly away on her typewriter. She turned around when he came out of the Skipper's office. Vic went over and stood by the desk. He was finding it hard to put into words what he wanted to say.

"Look, Lou, thanking you is a pretty feeble way to express—"

"Skip it, Vic," she said. "He would have given it to you, anyway."

Vic wasn't so sure about that. "If you'll have that long overdue dinner with me tonight, I'll try to think up the rest of the dialogue and tell you . . ."

She forced a little smile. "It's all right, Vic. You don't have to do that, you know."

He knew what she was thinking. "It isn't that, Lou," he said. "This time it's different. I've been a supercolossal dope—but I've got it all out of my system. I've learned a lot of things, Lou—like sticking to my own department—in more ways than one. If you'll see me tonight . . ."

Lou didn't dare trust her voice. She nodded her head quickly.

Then she was in his arms and he held her very close. It was good, he thought, to be back in sync again.

THE END

Boy, what a sucker

I was when it came to taking a laxative! That stuff I used to take tasted terrible. And it used to knock me for a goal! I'm a pretty husky guy, but that medicine was just *too strong!*

Later I tried another laxative which was supposed to be very mild. And that's when I made my second mistake! All it did was to churn me up inside and leave me feeling worse than before. It was just *too mild!*

Finally, I got a break! One of my buddies tipped me off to Ex-Lax and I bought myself a box. It tasted swell—just like good chocolate! And it worked better than anything I'd ever used. Ex-Lax is not too strong, not too mild . . . it's *just right!*

Try the  
**"HAPPY MEDIUM"**  
Laxative!

Ex-Lax is effective, all right—but effective in a gentle way. It won't weaken or upset you. It won't make you feel bad afterwards.  
—it's not too strong!

Ex-Lax can be taken with complete confidence. Although it looks and tastes just like chocolate, its action is thorough and dependable.  
—it's not too mild!

Ex-Lax is one laxative that avoids extremes. It strikes a Happy Medium! In other words:  
—it's just right!

As a precaution, use only as directed.

IF YOU HAVE A COLD  
AND NEED A LAXATIVE—  
It's particularly important when you're weakened by a cold not to take harsh, upsetting purgatives. Take Ex-Lax! It's thoroughly effective, yet not too strong!

"It has one distinct advantage—an awful lot can be done with it"

GEORGE HAMILTON GREEN

## A Woman Can't Win

Continued from page 20

A 5-MILE  
STREAK OF  
LIGHT

This Delta gun light flashes messages ship to ship or ship to shore—distances up to 5 miles—visible only to intended receivers. The enemy can't intercept them.

Much of this war and its training takes our armed forces into the night—into places where light is urgent and vital, and where it must be ingeniously used.

As long as a year and a half ago, in collaboration with government engineers, Delta genius and skill were put to work designing, devising types of lights, many of which had never before existed. Today there are running, fighting, steering, battle and blinker lights for the Navy—there are special lanterns and Powerlites for the Army, Signal Corps and other branches of the armed forces. Delta is proud that its experience is serving the cause of freedom in the manufacture of such lighting devices.

There'll be time enough when the war is won to get back to the business of making Delta lanterns and bicycle lights for the thousands who want them. Now, two Delta plants are producing exclusively for war, with men and management pledged 100% that every pay day is a War Bond day.

DELTA ELECTRIC CO., MARION, IND.

# Delta

You may expect Delta's war production experience to reflect itself tremendously in improved lanterns and bicycle lights when victory is won.

BUY U. S. WAR BONDS & STAMPS

there. Everybody'd think I was crazy. Old Parmenter didn't mean it. If he did, the old boy must be getting in his dotage, at last."

"Well I like that!" She flushed indignantly. "I don't see why I shouldn't go, if I'm invited—just as much as anybody else! Anybody'd think, to hear you all talk, that the place was sacred or something!"

"It's a men's club," said Mr. Cugat simply. "Men need a place where they can get off alone."

"Oh—pooh," she said lightly. "Men just like to say that. It makes them feel rugged or something."

Mr. Cugat looked patient.

Mr. Parmenter, however—possibly in his dotage—at any rate, quite evidently at an age which cared nothing about feeling rugged, called in due time and made good his invitation. Mrs. Cugat was jubilant. As Mr. Parmenter was the president of the Bay Beach, there wasn't much Mr. Cugat could say. He looked dubious but gave in gracefully and went about ordering her a kind of sheep-lined jacket that he particularly liked and procuring a hunting license for her.

Mrs. Cugat made sensible and masculine preparations, packing a sober little bag with flannel pajamas and removing her nail polish. Now that she was actually going, she found herself rather awed.

They left by bus late in the afternoon on a raw November day that boded no good to ducks—Mrs. Cugat looking small and meek and about ten years old in her new sheepskin coat and gripping her gun case tensely as she eyed with respect the other passengers who, in the main, were ruddy gentlemen similarly clothed, armed and plainly licensed. "Will there be very many there this week end, do you think?" she whispered a little nervously.

"Never can tell," replied Mr. Cugat, carefully stowing her gun and unbuttoning her jacket as if she were ten years old, "but I hope Swain's there. He's the game warden, you know," and added as usual: "One of the most wonderful fellows you ever met—"

The bus followed the shore line and made frequent stops—Willow Point, Beaver Creek, Little Bay—most of the ruddy gentlemen getting off at a place called Higgins' Marsh. Not members of our club, thought Mrs. Cugat and watched complacently from the bus window as they piled into a rattletrap old station wagon and went bumping off up the road. She saw the scudding clouds and bleak swampland pass with growing excitement. "Bay Beach next," Mr. Cugat announced.

BAY BEACH, at first glance, appeared to be nothing but a rusty mailbox. Leaning against it, however, was an ancient individual holding onto the handle of a child's express wagon. Mr. Cugat greeted him with enthusiasm. "Hello, Otto," he said, tossing their bags into the wagon. "How'd the summer treat you?"

Otto could not complain. He ducked his head at Mrs. Cugat in acknowledgment of Mr. Cugat's introduction and spat with the air of one who has now seen everything. Mr. Cugat muttered a sheepish aside, "Mr. Parmenter, y'know—" to which Otto replied, "Yeah—I heard," and they all started briskly off up the road, the little express wagon rattling at their heels.

Mrs. Cugat found herself, in less than five minutes, dwelling with more respect on the Higgins' Marsh station wagon. Mr. Cugat had insisted, sternly, on heavy boots, wool socks, a flannel shirt, a fleeced-lined cap and long underwear—evidently thistle-lined. She had meekly put them all on but she ought to have known better. Men always had to wear twice as many

clothes as women. She pushed the fleece back from her damp hair, reflecting ruefully on her wave, and hopefully unbuttoned her coat.

"Going too fast for you?" asked Mr. Cugat, politely slowing.

"Oh, no! I'm all right," she assured him hastily. But she wasn't—her feet felt like a pair of inflamed flatirons. In another five minutes, sodden and panting, she had climbed in the express wagon. One would have thought, she mused, trundling ignominiously along, that the Bay Beach with all its airs could afford something a little better than this.

To her relief, there was nobody on hand to witness their arrival. They rounded a bend in the road and there it was—the famous Bay Beach clubhouse—but, save for a few twinkling lights, the scene was empty and wind-swept. The clubhouse, erected in the late '80s, looked like a combination boathouse and bandstand and was painted a dark puce. A row of willows wept behind it and, behind them, the marsh stretched away into the horizon.

Mrs. Cugat climbed out of the express wagon and limped up the steep front steps. Then a vast, rouged woman with a jutting bust and pearl earrings appeared around the corner of the porch. "Down, Rex, you old sassbox, you!" she crooned, as an old black retriever sprang to its feet and barked sharply. "That's Mr. Swain's dog, y'know," she explained to Mrs. Cugat lightly. "He don't care much for the ladies." She turned to greet Mr. Cugat more hospitably, however. "I had to put you in number five, George," she apologized, "your own room having just the one bed, you know—"

"That's all right, Mac," he said.

"Dinner won't be until eight o'clock tonight," she added with a simper. "Mr. Swain's coming."

"I'm getting sick of this man Swain already," muttered Mrs. Cugat, toiling up the tall stairway to number five. "He'd better be good."

Mr. Cugat, ahead of her, kicked open a door. "Wait till you meet him," he said.

"Women eat out of his hand—not his fault," he added loyally.

"I'll bet," she murmured but a loud, being anxious to please, and down on the floor in the cold narrow and began, relievedly, to unlace her

"Hi, Cugat," said a friendly voice doorway and a nice-looking young man in long underwear—100% wool, d—sauntered in, gave Mrs. Cugat a credulous look, glared at Mr. Cugat, bolted out again. Mr. Cugat went door, called, "Sorry, Penrith," and it gently.

"Maybe this was a mistake, after all," she murmured apologetically. Mr. Cugat remained, rather obviously, silent.

ENTERING the big living room, cocktails half an hour later, her assurance was somewhat bolstered. Eight or nine men, seated around a table, rose instantly, as though they had only waiting, and Mr. Parmenter, advanced to meet her. "Ah," he said, "last! Our little Diana!" Then to the others explained why they were honored. Admiration and respect from every eye—save, possibly, Mr. Penrith's, whose were downcast, and Mr. Cugat stopped acting sheepish and modestly. Two very nice duck from Pittsburgh pulled up a chair between their own, and a colored woman in a white coat brought her a Martini.

A toast was proposed and Mrs. Cugat looked around her curiously. The room was large and its furnishing heterogeneous, even including a pair of bead curtains but it had an air. Faded group photographs of early hirsute members, letters, Audubon prints and mementos covered the walls, but new magazine chromium ash trays and innuendo match packs advertising some kind of food strewed its tables. The stove was old and blackened—the linoleum was new. The mantel bore a triangular electric clock of green plastic and an old pair of dueling pistols. There was a china umbrella stand full of gilded

## MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

COLLIER'S

"We're working on our next message to Congress"

— Could  
any of these things  
happen to you?

### STAMP THEFTS

Total \$9,722.86

THE assistant manager of a New York credit office was a stamp collector . . . collecting \$50 to \$60 a week from the association's stamp box. This amounted, over the years, to \$9,722.86, but under a fidelity bond, U. S. F. & G. paid the claim. If you are hiring new, untried employees or carrying larger cash balances, or larger inventories, you need added protection against employee dishonesty . . . now.

### Hit by a FALLING TRANSOM

BLITZED by a falling transom when he slammed a door behind him, this man suffered a scalp wound and internal injuries. But the homeowner was spared the trouble and expense of a lawsuit when U. S. F. & G. settled the claim out of court. If such an accident occurred in your home or business property, would you be protected against suit or claim?

### Boy breaks EXPENSIVE WINDOW

WHEN boy meets plate glass window, it's bad, as a New York storekeeper discovered. A youngster swung on an awning, causing an unattached support to strike and break the glass. Cost of this "swing session" was nearly \$150.00 . . . the glass was replaced by U. S. F. & G. under a plate glass insurance policy. Today plate glass is expensive and scarce. Are your display windows insured?

## Put it on the Scrap Pile, and see your Insurance Agent!

YOU can't trust to luck, these days. Although war news may push this fact off the front page, it's none the less true that crime has shown no abatement. In this case, burglars looted the safe of a county treasurer's office, obtaining more than \$6,000 in currency and negotiable securities. Contrary to his agent's recommendation, the county treasurer had insured the contents of the safe for only \$3,000.

Illustrated on this page are other actual cases taken from U. S. F. & G. files, showing some of the hazards that demand complete insurance coverage as a safeguard against financial loss.

Consult your Insurance Agent or Broker  
as you would your Doctor or Lawyer

To help you avoid serious financial jolts, your local U. S. F. & G. agent places at your disposal knowledge of insurance and how to use it—plus on-the-spot service in the payment of losses. He will be glad to make a Graphic Audit of your present insurance program—to help you guard against wartime risks which make an insurance audit imperative. Your U. S. F. & G. agent is one of thousands serving communities great and small throughout the United States, its possessions, and Canada. Consult him today.

COLLIER'S

JEFFERSON MACHINER

tails in one corner and an upright piano.

That no interior decorator had set foot here—and survived—was evident, but there was something about it, at that, that any decorator would barter his soul to achieve. The new linoleum came up for discussion and was highly approved. Its pattern, an occasional yellow blob on a field of black and gray swirls, it was agreed, was just the thing! It was not going to show the dirt the way that old red carpet had. Mrs. McIntosh, herself, had suggested linoleum and picked it out. Which was no surprise to Mrs. Cugat.

ANOTHER round of cocktails came in, followed by Mrs. McIntosh herself, bearing a bowl of popcorn. "This'll keep you going," she said with a motherly beam, "till Mr. Swain gets here," and they thanked her extravagantly. It was store popcorn and quite stale, Mrs. Cugat discovered, but nobody seemed to know the difference. Mrs. Cugat's health was drunk again and the two duck hunters from Pittsburgh waxed gallant and decided to flip a coin to see which would play gin rummy with her after dinner. Mr. Parmenter twinkled at her fondly, Mr. Cugat beamed, Mr. Penrith stopped blushing. Wagers were laid on how long it would take her to get her limit on the following day, and the odds were flattering. She began to feel gay, witty and rather special. Then the front door slammed and a booming, hearty laugh filled the house. Swain, at last. Several men took their glasses and went out to greet him. He could be heard announcing in a rumble that he was hungry enough to eat his weight in wildcats, which was followed by the sound of a smart spank, a tittering protest from Mrs. McIntosh and general laughter. There came a headlong series of chimes. "Dinner!" exclaimed everybody joyfully.

Mr. Swain, as they entered the dining room, was standing at the sideboard, surrounded by an admiring group and making himself a highball. Mrs. Cugat took one look at him and wished for her lipstick. Instead of looking like Daniel Boone, Mr. Swain looked like Ronald Colman. Instead of the plaid shirt, leathern breeches and fur cap with a tail, in which her always too fanciful imagination had dressed him, he was wearing a pale yellow flannel shirt, a foulard stock and a seal ring with a crest on it.

Mr. Parmenter hastened forward with elaborate introductions and, spurred by Martinis, launched off into a full account of Mrs. Cugat's prowess. Mr. Swain looked very polite but acutely bored. Feeling like a fool, Mrs. Cugat raised her eyebrows coolly—there being nothing much else to do. Why, the conceited don-

key! Who did he think he was, an If he was so wonderful, why wasn't the Army? She would ignore him.

But this proved to be embarrassing. Mr. Swain waited until she had gallantly seated by young Mr. Pen Mr. Parmenter's right and then pointed and sat at the farthest end of the table, with the two Pittsburgh hunters lowing like adoring puppies. The sorted themselves out, the youngest most agile winning in a scramble for nearest the warden, and Mrs. Cugat herself between Mr. Parmenter and an ancient brother-in-law and across Mr. Cugat and a brooding little man appeared to be stone-deaf. Scornful kept her eyes from traveling to the end any oftener than was necessary.

Those at the other end were served immediately, into stitches. They sobbed mirth and rolled in their chairs. Mr. Cugat had to admit, from an occasional that floated her way, that Mr. Swain something of a wit—but didn't he it! Black eyes wickedly alight, teeth iving beneath his dark mustache, he nated the entire conversation. "R cutup, aren't you?" she muttered temperedly as his voice dropped dis to finish the current side-splitter. Mr. Cugat soberly discussed pintails with Parmenter. She turned again to brother-in-law and dutifully caught his rambling tale of a 1908 snow "Just you wait until after dinner, my friend!" she vowed under her breath make you take some notice of me—I don't!"

But at the end of the meal when rose to go into the other room, Mr. merely stood for a moment court and then sat down again, in relief and ordered another highball eral, including the two Pittsburgh ers (who had apparently forgotten about gin rummy) drew up chairs to with him. The dining-room door but as their muffled laughter came to those settling around the stove, ter another of them sauntered back.

Mrs. Cugat found herself, after a alone with Mr. Parmenter, Mr. Cugat gone out to the kennels to see his dog. Conversation died and Mr. Parmenter dozed shamelessly. Then she a voice from the dining room suggesting away from the table and a rejoinder by the game warden to the that he was in no mood for lady hunt named "Dinah" and what the devil was place coming to? Mrs. Cugat got to her feet and tiptoed out of the her cheeks hot. Crude, ill-mannered She paused irresolutely at the foot stairs, hating to go to bed yet—since

only a little after nine o'clock. A half-open door, along the hall, revealed a pleasant lighted room with red curtains. She peeped timidly in.

The gun room. Well, this would give her something to do until Mr. Cugat came back. She could go in and quietly look around without, she hoped, discommodating the great Swain too much.

THE walls were lined with racks of shotguns. There was a glass cabinet of old service revolvers and a row of ancient flintlocks. Above the racks ran a crowded shelf of fusty-looking stuffed birds—very old stuffed birds, judging by the dust. In the midst, however, in a handsome glass case was another, a disagreeable-looking, up-backed creature posed uncomfortably on one leg amid some imitation bullfinches. Mrs. Cugat went over to read the label at the base of its case. *Sacred Ibis (Threskiornis aethiopica) killed by Van R. Swain, April 19, 1937, Blue Nile, Egypt*, it said. The corners of Mrs. Cugat's mouth turned down and she drew her attention to the guns—running her fingers lightly along the row of polished stocks. There was no dust here. The barrels gleamed like satin and the barrels were sleek with grooming. Timidly, she lifted a graceful little rifle from its rack and balanced it appreciatively. Smiling at the way it handled, she pulled up on the Sacred Ibis. She must try a rifle again some day. She went on to another rack.

His one stood a little apart and Mrs. Cugat bent to examine its contents with an exclamation of pleasure. Here was evidently the cream of the collection—some real beauties! An English Holland and Leamington—what looked like a Parker No. 1. E. Gently, she lifted out a little, long-barreled over-and-under to look at the thing. It was a peculiarly made gun—none she'd ever seen. She broke the lock curiously, wondering what size the gauge was—it looked too small for a quail. On a table beside her were several open boxes of shells and she selected one and experimentally slipped it in. Well, it was wrong—it was a twenty—full of lead evidently. Interested, she pulled up the Ibis again. There was a quick growl, a warning, a snarl—and she staggered backward under the impact of a leaping body. A blast like a cannon's split the air.

Opening her eyes, she found herself looking into the grave face of Mr. Swain. The black retriever, pompously guarding the gun rack; across the room, the Sacred Ibis without any head. The Pittsburgh hunters, from the hall, hurried over to it with cries of dismay. Mr. Cugat pulled slowly at his mustache. "Well!" he drawled, "getting in a little practice, eh?"

Mrs. Cugat sputtered. "That dog—" she began. "I know," he said coldly. "He resents my fingers handling my guns," and stooped to pick up the little shotgun from the floor and carefully ejected the empty cartridge. There was a deep scratch on the stock where it had hit against something sharp in falling. He ran his finger along it gently and then turned, without a word, and left the room.

A shocked cortege bearing the Sacred Ibis moved toward the wastebasket. "You're all right, I hope," one of them called belatedly, as she moved to let them pass.

HE awoke, however, in the dark early morning, mortification assuaged and quivering with excitement. Mr. Cugat was already dressed. "Get your clothes on," he ordered, "and meet me down in the dining room. There'll be coffee." She hurried out of bed and into her things.

The dining room was brightly lighted and empty, save for Mr. Cugat, but a pretty colored boy brought a steaming

cup and a plate of toast. "Drink up," Mr. Cugat urged. "We're late—most of the others have gone."

She obediently managed one or two swallows. "I don't believe I care for much," she apologized after a minute or two. "I can never seem to eat when I'm excited, you know, it makes me feel like throwing up—"

"For the love of Pete," he exclaimed anxiously, "try not to."

But out in the sharp, black morning, queasiness passed and she followed him and his obedient little retriever, Mellow, eagerly along the narrow planks leading across the marsh.

"Thanks to you, 'Diana,' we drew the walk-out blind," said Mr. Cugat with satisfaction, "and it's a honey. You can get your limit out here in half an hour with a slingshot. Mr. Parmenter," he went on, "usually has his name on it but I guess, for you, he'd give up anything." She began to feel more lighthearted.

The walk-out blind was a comfortable little shelter made of cornstalks with a wooden floor and a bench. It had a roof that popped open like a jack-in-the-box. Sitting inside, close to Mr. Cugat, their vacuum bottle, sandwiches and other belongings cozily arranged, she felt that same delicious snugness she'd felt as a child when she'd found a new playhouse in some secret place. She cuddled impulsively closer to him and rubbed her cheek against his sleeve.

"Now, now," he said, "no necking."

THE sun came up and the empty sky grew bright. From time to time somebody with a duck call quacked forlornly near at hand. Half an hour passed and she shifted stiffly and smothered a yawn, regarding his quiet profile tenderly. Mr. Cugat was really very good-looking, particularly in these rugged clothes. He sat motionless, his gun over his arm, occasionally flicking the ash from his cigarette. "What are you thinking about?" she asked gently.

"I was thinking that we ought to get around to making your will," he said cheerfully. "We keep putting it off. You'd better come down to the office some day next week and we'll talk it over with Benson." She subsided and the usual depressing train of thought that this particular subject set in motion—morbid speculation on Mr. Cugat's daily habits after she was gone—got under way.

"What does the club pay that Mrs. McIntosh?" she asked suddenly, arriving at an unexpected destination.

Surprised, Mr. Cugat named a figure. She exclaimed indignantly. "For what that woman does? That's perfectly ridiculous!"

"It's a lot," admitted Mr. Cugat, "but she's worth it. We'll never find another like her!" Mrs. Cugat laughed shortly. "Look at that dinner last night—" he went on dotingly, "where else could you get a meal like that?"

"There wasn't a single green vegetable!" "I should hope not!" he exclaimed fervently.

"And canned soup and drugstore ice cream! When she could just as well have made them herself. Plain lazy—that's what she is—if you want the truth!"

"You wanted to come," said Mr. Cugat mildly, "nobody asked you to like it."

Mrs. Cugat, stung, subsided again somewhat guiltily and tried to slip her icy toes, unnoticed, under Mellow's belly. Mellow looked reproachful and got up and went outside to squat, shivering.

"Whatsa matter, girl?" crooned Mr. Cugat in concern.

"Have you ever done anything yet about asking Mr. Atterbury to raise your salary?" asked Mrs. Cugat brightly, by way of changing the subject.

"No," he said shortly.

"I don't see why not!" she countered

# Famous Highs

by C. A. Voight

## Motor Boat high!

TO SET A NEW WORLD'S MOTOR BOAT SPEED RECORD YOU'D HAVE TO BEAT 141.74 MILES PER HOUR! BUT TO SET A NEW HIGH IN BOURBON ENJOYMENT—JUST SAMPLE THE SMOOTHNESS OF TODAY'S TEN HIGH, THE WHISKEY WITH "NO ROUGH EDGES"!

## Batting high!

SINCE 1894 NO ONE HAS EQUALLED HUGH DUFFY'S BATTING AVERAGE—A SIZZLING .438! AND NO WHISKEY HAS EVER EQUALLED THE SMOOTHNESS OF TEN HIGH, THANKS TO "DE-ROUGHING."

## ..and Ten High!

A new high in whiskey smoothness!

Please be patient. If your store or tavern is temporarily out of TEN HIGH there are two reasons: (1) Since all distilleries are now making war alcohol instead of whiskey, the available supply of TEN HIGH is on quota "for the duration." (2) Railways must give war materials and food the right of way, so your dealer's shipment of TEN HIGH may sometimes be delayed.

This Straight Bourbon Whiskey is 4 years old. 86 proof. Hiram Walker & Sons Inc., Peoria, Ill.

with new energy. "You certainly deserve it—all this extra Washington work and everything!" And added in a familiar tone, "What's the matter? Are you afraid of him or something?"

"Do we have to go into all that again—here?" he protested. "This is supposed to come under the head of fun, you know. Good Lord! Why can't a woman just sit still once in a while and enjoy herself?"

"You started it," she sniffed, "bringing up that old will again. I suppose that comes under the head of fun! Fun for you, maybe—sitting there planning what you're going to do when I'm dead and out of the way! Why don't you just move out here with your wonderful Mrs. McIntosh and end up with a good case of beriberi?"

Mr. Cugat did not deign to answer this and she retired, ashamed. Why was it that husbands and wives so often got off onto just the wrong things at the wrong time? If she were sitting out here with anybody else she would be exerting every effort to be charming, interested and entertaining but here she was, all cozy in a duck blind with Mr. Cugat whom she adored, and for some reason their every pet bone of contention had perversely come to light. There were some aspects of married life that were unexplainable and depressing.

She moved her feet gently, found them completely numb. The sun had subsided and a raw wind sprung up. "This ought to bring them in!" Mr. Cugat observed happily. Maybe if she loosened her boot laces, she thought, and resting her gun in a corner, bent over to tug at the laces with stiff fingers. Something cold, hard and crawling lit on her bare neck and scampered for cover down her back. "E-e-e-ek!" she squealed, knocking her gun over and trampling on Mellow's tail. Mellow yelped in agony and disappeared.

"What is it?" cried Mr. Cugat.

"Oh—I don't know! Something perfectly huge and awful is down my back!" "Spider, maybe," he suggested helpfully.

SHE tore at the buttons of her collar. "Oh, darling," she chattered, finally loosening it. "reach down quick and see! It's probably a black widow or something—I was just reading about them—" Mr. Cugat, unflurried, stood his gun in a corner, took off his glove and investigated. She could feel whatever it was stirring warily in any one of six different places.

A sudden din of squawking rose from their neighbor with the duck call. "Here they come," said Mr. Cugat grimly, his hand imprisoned down her back. Six pairs of rhythmically flapping wings traveled low over their heads and sank out of sight in the pond behind them. But Mrs. Cugat had forgotten all about ducks.

"Have you found it?" she quavered. Mr. Cugat removed his hand and arm and looked down.

"I don't see a thing," he muttered. She shook herself tentatively and could feel nothing.

"It's gone," she said weakly. "Oh, dear! Do you suppose it was a spider?"

"No," said Mr. Cugat shortly. "Spiders hibernate in weather like this. Probably some little piece of corn stalk or something." She buttoned her shirt doubtfully. "That was a beautiful bunch of blacks that came in just now," he sighed wistfully but Mrs. Cugat was still absorbed in her spider.

"They say you can tell a black widow because it has red spots on its stomach," she vouchsafed, "and five minutes after you've been bitten, you're unconscious." "Evidently, you've been spared," observed Mr. Cugat trenchantly.

She huddled into her collar and tried to keep her teeth from chattering. Her feet had passed the numb stage and progressed to aching. How could she, in the same clothes, be so hot yesterday and so cold today? Look at Mr. Cugat! Warm and

comfortable—his exploring fingers had been like toast—and yesterday, when she'd been dripping with perspiration, he'd been cool and comfortable. Men were wonderful!

"Here come some more!" he exclaimed suddenly in an eager whisper. "Got your gun? You take the first shot."

Six black specks on the horizon took form and life. The man with the duck call quacked frenziedly and four swiftly winging shapes swooped down. Mrs. Cugat lifted her gun, wavered and then slowly lowered it without firing. Mr. Cugat's gun cracked a split second later, and one of the sailing shapes hurtled down. Mellow splashed into the water. "What happened to you?" he queried, turning, eyes alight.

"Oh, George," she said, chagrined. "I don't know! Just as I was on one, he sort of leaned out and looked down over his wing like an aviator. I simply couldn't! It was the cutest thing you ever saw! And now the poor thing's dead—" she mourned as a dripping Mellow came triumphantly back with a big mallard in her mouth.

"But that was the main idea in coming out here, wasn't it?" asked Mr. Cugat curiously. "To shoot ducks, I mean—"

"I know," she said miserably. "I'm a perfect idiot, but I didn't have any idea I'd feel this way." She took Mellow's limp burden from her and gently stroked the shimmering green feathers. "I never was the sporting type, I guess—it's just an accident that I can shoot—I hate to kill anything and always have."

"Wait till you've missed one or two," Mr. Cugat said comfortably, "you'll get over that! It's not easy."

"I don't believe I ever will," she sighed, sitting down despondently, still holding the dead duck. "Look, darling—you stay here and enjoy yourself and I'll walk in. For some reason, I seem to be blue with cold and I'm nothing but a trouble to you. My hands ache so, I doubt if I could hit anything even if I wanted to."

Mr. Cugat protested vigorously but she insisted and, breaking her gun, dropped a light kiss on his cheek, ducked stiffly out the little door and started off across the marsh toward the clubhouse. She was a fine one, she was! Mr. Cugat had been perfectly right about her coming down here—she'd been a perfect nuisance and made him look like a softy in front of his friends. But right now she was too cold to care. She couldn't care about anything, even Mr. Cugat, until she got warmer. Maybe that colored boy could make her

a hot toddy or something. She looked out of her collar to see how far off relation of this possibility was and entered a strolling figure, coming toward

Swain! Of all people! And there was escaping him either—there was on a narrow walk and they were both on was walking slowly with his head the black retriever at his heels. He dressed to the nines—laced boots breeches and a short coat with a pe fur-lined hood. A cigarette hung n lantly from the corner of his mouth hurriedly tucked up a straggling loc her cheeks, so lately cold, flushed he chagrin. She could just imagine th ting humor with which he would, f after, relate the tale of the Sacred lb the scorn and amusement in his bla when he heard that she'd gotten not gle duck. She lifted her head del Well, let him have his fun! She'd pr never see him again, anyway.

THERE was a whirring ahead c Something soared suddenly int air. She raised her gun, fired ahead, came plummeting down. Wholly st she looked toward Swain. He'd st dead in his tracks and was looking A flood of pleasant exultation welled her and she started to tremble. "Fancypants," she muttered. "I'm no a dud after all, am I?" She smile waved casually. Mr. Swain did not the salute but turned and said som to his dog who bounded off. There splashing and crashing behind her an Cugat emerged, white-faced, from blind.

"Are you all right?" he shouted then, as he drew closer, panted. "Lord! What was that shot? I th you'd probably fallen and blown head off!"

"Not at all," she explained with d as the warden strolled up, "I was just ing along and a duck went up in fro me, so I shot it." Mr. Swain's dog out through the reeds and Mr. stopped suddenly—dead in his t "That's a funny-looking duck!" excl Mrs. Cugat.

Mr. Swain stooped and took the gently from the dog's mouth. "It deed," he said. Then he gave Mr. C long and sympathetic look.

Mr. Cugat sighed. "That's a hen ant, honey," he said resignedly. "Th is fifty dollars."

***"Someday,  
Treatment of Disease  
will be a Confession  
of Failure"***

*by the late Dr. GEORGE CRILE,  
World-Famous Physician and Scientist*

*"The chief duty of the physician will be to develop the race . . ."*

**I**N THE 16TH CENTURY, the average length of human life was 18 to 20 years; in 1800, less than 25 years; in 1900, between 45 and 48 years; in 1924, 56 years.

Not only is life longer, but it is better—better physically, better mentally, and, I believe, better morally.

*What of the future?*

The chief duty of the physician will be to develop the race, to . . .

direct the development  
of youth . . . .

and to guide the adult along sound biological lines so that he may safely engage in the maximum of work and play.

In other words, the physician will be called upon to study the whole problem of man in relation to his environment. As for disease, the physician will be more concerned with its prevention than with its treatment. In fact, *treatment of disease someday will be a confession of failure.*

As for the different divisions of medical science, the present outlook would seem to indicate that in the future their individual progress will vary greatly. **Surgery** will continue to

make advances, but most of its obstacles have already been conquered, and its field will grow narrower as preventive medicine advances.

The field of the **internist**, on the other hand, will be widened by advances, particularly in his knowledge of the ductless glands and the mechanism of the mind — psychology, memory, reason.

**Tuberculosis** and diabetes will be conquered. The public will learn the importance of the early eradication of focal infections and the incidence of other infectious diseases will be reduced . . . Diseases of the heart and blood vessels, due to infections, will be reduced . . .

On the other hand,

to the extent that these diseases are caused by nervous and **mental strain** — by the kinetic drive of environmental conditions — the incidence may even be increased.

The incidence of **venereal disease** will decline greatly. Because of change in public attitude it will be openly controlled.

The hazard of **childbirth** will be even further reduced, but congenital deformities will occur with the same frequency.

The nature of **cancer** will eventually be revealed, but it will still claim many victims.

Within certain limits, therefore, the physician of the future will be able to control the growth of the body and the development of the mind. He will acquire such a knowledge of biochemical and biophysical processes that he will be able to guide his fellowmen as an engineer of living processes."

To many thousands of sufferers all over the world the airplane has already carried quick and sure medical relief. In addition to bringing world travel within reach of the common man everywhere, tomorrow's air transport will also bring men health and the latest discoveries of science.

*Just a few months ago, Pan American flew one thousand pounds of desperately needed meningitis serum to one of our Good Neighbors in South America . . . In Africa, where 30% of the workers were being laid low by malaria, Pan American flew in specialists who cut that figure to 1%.*

Until Victory is won, everything we have to offer—the experience gained by more than 165 million miles of overseas flight, trained personnel and service to 60 foreign countries and colonies—is at work for the government and military services of the United States.

## The Secret Love

Continued from page 18

She sauntered happily down the street—troubled by nothing so profound as a thought, as provocative as a dream. She glanced down from time to time to admire the way her new woolen socks were folded over her fashionably dirty saddle shoes. She peered in some curiosity at a strange car that was parked in front of a neighbor's house. She explored the pockets of her coat for a quarter that was left over from her lunch money. She would have a fudge sundae, she decided, as she turned into the drugstore. . . .

And without further ado she fell in love. She knew it was love the minute she looked at the new soda jerker. He was tall and dark and slender. He lifted one eyebrow and smiled at her, in a superior way, as she slowly approached the fountain.

"What'll it be?" he said.

But it wasn't what he said. It was the way he said it. His voice went through her—like a knife through rapidly melting butter. She felt weak and wonderful—she felt sad and at the same time she felt hilarious.

"I guess," she said, "I'll have a fudge sundae. With marshmallow on it. Slathers of marshmallow. With nuts. Pul-ease!"

"Don't mention it."

He was quick and dashing in all his movements. He reached for one of the little glass dishes on the shelf, and its neighbor fell on the floor and broke. He fell back dramatically.

"Say!" he said. "Who did that?"

Nina giggled in pure delight. She watched him swing the marshmallow sauce around in a wide curve and then splash it on top of the ice cream. He had a little strip of adhesive tape on the back of his hand and she wondered anxiously how he had hurt himself. She stole another glance at him as he reached for a spoon. He was wonderful-looking. He didn't have the best complexion in the world—but that fact only served to endear him to her the more. She was stirred by a vast maternal tenderness. . . .

"I guess you don't go to High," she ventured. "I mean to Central."

"Naw," he said. "I go to Newcomb. But there's not such a bad crowd at Central," he conceded, after a pause. "I know some of the fellows that go there."

IT WAS, Nina felt, a bond between them. She asked the names of his acquaintances at Central, and exclaimed in almost rapturous enthusiasm over each name he mentioned. She discovered that his own name was Bill—Bill Davis. She learned furthermore, that he was drawing near to his seventeenth birthday—that he was fond of salted peanuts—that he was allergic to cloves—and that he intended, fate being kind, to be a bombardier. She might have elicited even more of these fascinating facts over the melting remains of her fudge sundae had not the after-movie crowd come surging in to remind her of the passing time.

"Am I a dope?" she cried wildly. "Just sitting here!"

"That's okay!" he said—and called her back. "But wait a minute! Hold everything! Here's your check!"

Nina turned a bright red. She fished out the forgotten quarter and paid him. Then she stumbled out of the drugstore in an agony of embarrassment—which gave way, before she had gone two blocks, to a state of unutterable bliss. *Nina Davis*—she whispered to herself. *Nina Burton Davis*. . . .

She had forgotten the cough lozenges. But that was all right. Alison had also forgotten about them.

Alison was alone. She was standing by

the window, staring out at a wintry lawn. "Hi!" Nina said. "Where's Lieutenant Jeffries?"

"He's gone," Alison informed her in a muffled voice. "And if you don't mind very much I'd rather not talk about it."

"Sure, sure," Nina said amiably. "That's okay with me. You mean you had a fight or something?"

But—if there was an answer—Nina did not hear it. A terrible thought had come into her mind—had sent her racing up the stairs to her room.

Before the mirror her worst suspicions were confirmed. She looked awful. There wasn't any powder on her nose. A lank little tuft of hair was sticking out from under her scarf. This was the way she'd looked to Bill. And there was no use kidding herself any more about her figure. She was fat. She was darned near ready for a circus or something. And she knew what had to come off—because a brutal prune in the Physical Ed department had told her so a week ago. Fifteen pounds had to come off.

SHE tackled her mother about it the first thing in the morning.

"Mother," she said, "I'm going on a diet."

"All right," her mother said. "Perhaps you are getting a little pudgy. But don't look so grim about it."

"I'm not grim about it, Mother. But it's important. And I'm giving up desserts. So I've only got one perfectly simple little favor to ask of you, Mother. You could give me a break."

"What kind of a break?"

"Well, while I'm on this diet, just please don't bear down on anything chocolate, Mother—that's all I ask. I mean you can have things like prune whip and apple sauce and those little tapioca jobs."

"I see. The rest of us are to have the dullest imaginable meals—so that you can be beautiful all of a sudden!" But Mrs. Burton's mind was already wandering from the subject. She looked at her daughter intently. "Nina! Were you here last night—when Alison quarreled with Rand Jeffries?"

Nina shook her head. "What's the matter? Have they had a bust-up?"

"I'm afraid so. They quarreled over whether or not Alison was to see anything of other men while Rand was in the Navy. That's the ridiculous sort of thing people in love always quarrel about—it could be patched up in no time if they both weren't so stubborn!" Mrs. Burton frowned. "All the Craigs have that stubborn streak, of course—and then you only have to look at that chin of Rand's. Like granite! Well, it's just a shame, that's all! They were so obviously made for each other!"

Nina sauntered to the mirror over the mantel.

"Oh, well—" she murmured. "Why get all worked up and agitated? If they're such dopes!"

Her mother stared at her.

"When you're a little older, Nina, I hope you won't be so completely callous! I'm ashamed of you! Your poor cousin can break her heart over this man—and you merely shrug your shoulders!"

Nina wheeled around. Her eyes were blazing. She spoke with fervor.

"Mother! If you're in love with somebody you don't act the way Alison's acting! Why—! If you were in love with a man—really in love—you wouldn't let him go out of your life like that! You'd care too much to have that kind of crazy-fool pride! Why, you'd go right down on your knees to him! You'd let him walk over you! You'd ask him to! And you'd love it!"

Having delivered herself of these im-

The DASH that makes the DISH

passioned words, Nina rushed, quite suddenly, from the room. Her mother was speechless. It was, indeed, several seconds before Christine Burton realized that her mouth had dropped open. She closed it with a decisive little snap.

"Now what—?" she asked herself. "Now what—?"

NINA was having her troubles. Worrying and dieting had chiseled off three pounds, but any change in her personal appearance was not profiting her. Mindful of the diet, she had substituted soft drinks for fudge sundaes, but she could scarcely permit herself to have more than three sips a day at Gilmore's soda fountain. She could not linger over any one of these sips as long as she would have liked to linger.

It was infuriating. Bill Davis never really saw her except from a professional point of view. She was nothing in his eyes but a consumer of cokes. When she gave him the slow, mysterious smiles she'd practiced before her mirror the night before, he misinterpreted these smiles—and simply asked her if she wanted a couple of cokes or a glass of water. And yet some instinct informed her that if she could only see him away from the soda fountain she would be able to wangle their relationship to a more personal plane. She stared hard at the back of his head, willing him to ask her for a date—on her will, forceful as it was, merely disguised by the bland preoccupation of the businessman. She would be compelled, on these occasions, to plunk a nickel on the counter and hurry purposefully out of the drugstore—as if bent on very important and pressing affairs of her own.

"I HAVE never seen," said Nina's mother, "such gloom in a house!" And she looked, in mild vexation, from Nina to Alison—who had both been getting up from their chairs and wandering consolately from the window to the radio and from the radio to the mirror over the mantel.

"I can't imagine what's the matter with Nina," she went on, "unless it's the deserts she isn't having—but as for you, Alison, I think you're carrying this whole thing too far. I think you should march right over to the telephone and call up that man and tell him you apologize!" "Never!" cried Alison. "Never would I say anything so utterly ignominious, Christine! I've got my pride!"

"You've got your pride but you haven't got him," Nina pointed out to her, placidly. "And I'll bet you'll never see him again. I'll bet he'll be sent overseas and meet some other girl while he's having other shore leave—and this girl he'll get

married to because she won't be such a sap."

Alison flushed. She chose to be ironical. "I'm extremely grateful for all this interest in my affairs," she said, "but I could get along quite nicely without it!"

"It was just for your own good!" Nina protested. "Because honestly you don't seem to know anything about men, Alison." She was diverted for a moment, as she studied her own slightly bitten fingernails. She wondered if a person like Bill Davis would go for a garnet polish—provided her mother would let her get out of the house with it. She went on, however, after a fleeting pause. "If I were in your place—not that you've asked my advice but in case you did—I'd go somewhere where I'd be likely to see this wacky individual. I wouldn't just sit moping around here all day!"

"Nina," said Nina's mother, "shouldn't talk so much. But I really think she's right, Alison. Rand will go away and you'll never have a chance to make things up with him. But if you were just to arrange it so you'd run into him some place—"

ALISON sprang to her feet. "You miss the point entirely! Both of you! Why, I'd avoid going anywhere he was likely to be—or where anybody who had anything to do with him was likely to be! Why, ever since this whole thing happened I haven't even gone down Amsterdam Avenue—where his sister lives! Why, I haven't even gone into Gilmore's drugstore!"

Nina had just decided she would put the garnet polish on in her bedroom and then put on her wool mittens and ease out of the house with them. But the mention of Gilmore's drugstore swept the polish from her mind. She felt her hands turning cold and damp. It was as if someone had spoken—in a loud and jeering tone—of her secret love.

"What's Gilmore's drugstore got to do with it?" she inquired hoarsely.

"It was just an example," Alison explained with some pride. "I wouldn't go there any more because Rand's kid nephew works there after school. And I wouldn't want Rand to think I was trying to pry any information out of his relatives! I wouldn't give him the satisfaction!"

Nina brushed the latter part of this speech aside. "His nephew?" she demanded. "You mean Bill is his nephew? Bill Davis? You mean Bill?"

"Yes," said Alison. "Do you know him? A great gawky boy with a voice like an old phonograph record. A kind of adolescent nightmare."

Nina controlled herself—although this description of her beloved had not been pleasing to her ears. She leaned forward.

"I feel you're making a great mistake,"

## You can earn a place in this landing barge!

You may not be there in person . . . but in spirit you can be part of every invasion that hits the Axis. You earn that right by . . . *thoughtful buying!*

Thoughtful buying has two meanings. First, it calls for going without things unless you really need them. Second, it means seeing that everything you have to buy is the best, the longest-lasting you can get. Then it won't have to be replaced so soon. That's thoughtful buying . . . and naturally you'll want to take good care of everything you own. All this is important today. It saves labor and materials for the needed tools of war.

Yes, buy wisely, thoughtfully, sparingly . . . and you'll have money to invest in War Bonds. Then, after the war, you'll be able to enjoy the newer, better products that Industry is planning now.

she said. "I feel you ought to ask Lieutenant Jeffries to come and see you."

Nina's cousin didn't bother to answer this. She stalked over to the window again and stared out on the street. But Nina's mother was touched. She thought—and so informed Nina's father later on—that the child was at last beginning to develop an interest in other people's sorrows and joys.

SHE would have been even more surprised had she known to what lengths this newly acquired compassion was carrying her daughter.

Nina was sitting in the lobby of the Hotel Randolph, thoughtfully considering Rand Jeffries' chin. It was obstinate all right. But she marshaled her carefully composed sentences and brought them out as tellingly as she could.

"I suppose," she said, "you think it's funny—me coming to your hotel like this. I suppose you think it wasn't the thing for me to do. But the way I look at it—I felt this whole situation was up to me. I happen, Lieutenant Jeffries, to be an extrovert."

"That's interesting," he said. She was temporarily diverted. "Yes," she said. "I never just brood over stuff. I'm the type that likes action. That's the way you are when you happen to be an extrovert."

He looked at her patiently. "I get all that," he said. "But where do I come in?"

"Oh!" said Nina. "I thought I'd better just come over here and take the bull by the horns and ask you why you haven't been over to the house—to see my cousin Alison."

He turned a dull red. "Alison doesn't know you're here?" "Of course not! She'd have a fit. Alison's an introvert."

There was a moment before he spoke. "Perhaps," he said, "you'd better let us introverts struggle along by ourselves."

"But you make such an awful mess of things!" Nina pointed out promptly. "I think it was awful—just take for instance—the way you treated my poor dope of a cousin!"

"Oh, you do!" "Sure, I do! And everybody will be talking about it and blaming you for it. I shouldn't think you'd like that very much."

"What I'd like," he said, "would be to run my own life—with, of course, your kind permission."

Nina was offended. If Rand Jeffries hadn't been Bill's uncle, she thought, he'd have had a pretty terrific crack for that. But she managed a thin smile—remembering Bill—and as she rose to go she ventured a final word.

"Well, I'll say no more," she observed. "Only it just *might* interest you to know that Alison is wasting away."

"Alison," he said, "is *what*?"

"Wasting away," Nina repeated, with more emphasis. "She's just getting thinner and thinner and thinner! And she doesn't eat anything and she cries all the time. And Mother said she was worried about her—downright worried!" Nina broke off—her eyes widening. "But what on earth's the matter with you?"

"Never mind!" he said. "Wait a minute—I've got to get my hat!"

ALISON was exceedingly upset. She hadn't been upset in the beginning. At the first glimpse of Rand a light had come into her eyes and a tide of color had come into her cheeks. She had cried his name in soft, incredulous rapture. But that was before she'd found out what Nina had said to him.

"I hope you realize," she cried, "that Nina had no reason on earth to tell you anything so completely absurd: 'Not eating!' Of course, I'm eating! Oh, I won't have you feeling sorry for me!"

"I was feeling sorry for myself," Rand said, stiffly. "But if I can't make you believe that—"

They stood there measuring each other with their chins stuck out. Then Rand began looking around for his hat again.

"Oh, my gosh!" said Nina. She had spoken aloud, rather to her own surprise. Alison stared at her. "I really don't understand you, Nina," she said. "I really don't!"

Rand was staring at her too. "Little Miss Fix-It," he muttered.

He was Bill's uncle. Nina had to keep on reminding herself of that fact. She controlled a childish impulse to make a face at him.

"I'd just hoped," she observed, piously, "that I could get you people together again. I didn't expect to get any thanks for it but on the other hand I certainly didn't think either of you would be sore about it! My gosh! There wasn't anything in it for *me*, was there?"

"Well—" Alison began, uncertainly.

"All I wanted," Nina rushed on, "was just a little peace and quiet around here! And—me being an extrovert—I could just bring the old brain to bear on the thing better than you could. But you have all these cockeyed complexes—Well! I fail to see why it couldn't have worked out all right—with Lieutenant Jeffries coming over to see you—and I and my father and mother going to a movie or something if you didn't care to be disturbed—or maybe some night if Lieutenant Jeffries felt like it he could bring Bill over—"

"Bill?" said Alison. "Bill Davis," said Nina, a rosy flush suffusing cheeks that were not yet haggard. "The one who works in the drugstore. He happens to."

It came to them by slow degrees. But when they finally got it, Rand and Alison began laughing in the same instant. They

rocked and roared with laughter—their stubbornness went down under mirth. They became aware of that too, in precisely the same instant.

"Oh, darling!" said Alison.

"Oh, darling!" said Rand.

"Listen!" cried Alison, running to "I'll never go out with another man! I'll never talk to another man! I'll never at another man!"

Then they were laughing again, and clinging to each other. . . .

"Well," Nina said, "I guess I'll be sitting off. . . ."

BUT they didn't forget about her. Same night, after dinner, Rand brought Bill Davis to the house.

"Here," he said, "is my lean and gony nephew. Give *him* something to eat. *He's* wasting away!"

But Nina hadn't needed that advice. She knew how to take care of Bill now she had him in her own domain. She plied him with chocolate-covered do nuts and coconut cake and tart apple and slightly stale nougats.

"Say!" Bill Davis said. "Why don't you do this more often? Huh? Why don't we?"

Nina nodded. That was the name of an old song—but it could be their theme song. You didn't have to have a new song. Then they both smiled and shook their heads as an admiring masculine murmur and a little feminine squeal came to them from the living room. Bill reached for another nougat.

"They've got it bad," he said. There was a note of genuine compassion in Nina's voice.

"It's but quaint—" she agreed. "It's definitely *quaint*."

THE END

COLLIER'S

"Give me good old terra firma any time"

PFC NED HILTON

For Generations My White Lead  
has been famous for Making Things Last...

**NOW—get this Lasting Protection  
in the NEW DUTCH BOY PAINT!**

Today Dutch Boy White Lead—supplied for generations in PASTE form for mixing with linseed oil—can also be had as a ready-to-use PAINT.

This new Dutch Boy Paint is pure white lead—  
—all ready to spread.

Like the famous paste form, it not only lasts long itself but makes property last long too. For it hugs tight...sparkling white. And fights weather to the end...never cracks and scales. Thus it costs little per year of protection and saves the expense of burning off old paint when repaint time finally does come.

Yet Dutch Boy White Lead Paint costs no more than regular quality paints.

Note that it comes two ways: (1) special "Exterior Primer" for a first coat with extra sealing, hiding and covering power; (2) "Outside White" for finishing coat and general painting.

Remember—there is enough white lead for both military and civilian uses. No shortage exists. And its good quality is unchanged. Remember, too, whichever form of Dutch Boy goes on your home—the famous paste or the new paint—"you're money ahead when you paint with white lead."

Get it from your local  
Dutch Boy dealer

**2 FORMS**

(1) Special "EXTERIOR PRIMER" for a First Coat with extra sealing, hiding and covering power. (2) "OUTSIDE WHITE" for Finishing Coat and General Painting.

**MARLIN  
BLADES**

THE MARLIN FIREARMS CO.

The strategy of the Republican managers in 1896 would not permit William McKinley, the Republican candidate, to leave his home in Canton, Ohio. Unhappily, McKinley had been, as a member of Congress, more than kind toward silver. The Republican platform committed him to gold, and McKinley, being what he was, had no difficulty in about-facing and becoming an ardent advocate of the gold standard. But if he had wandered away from home base, he might have found himself in the West, which was rabid for silver.

Consequently, he conducted the first front-porch campaign in the history of American politics. Instead of going out to meet the people, delegations were taken to Canton from all parts of the country to meet him. No hand-picked, expenses-paid member of a delegation would venture to ask embarrassing questions.

A man by the name of Kelso conceived the idea of turning an honest penny by selling bas-reliefs of the Republican candidate. The Scotch in a man is bound to come out. In order to advertise the product, Kelso worked up a plan whereby the Republican Club would send a delegation to Canton to present Governor McKinley with one of the bas-reliefs of himself, cast in bronze. Kelso suggested the junket to me and I fell for it. I was too much of a greenhorn even to suspect that I was being used. I did not know, until a friend put me wise later, of the scheme to market the article, but in my wide-eyed innocence thought that the plan was an expression of generous enthusiasm for a great cause.

### One Upper Berth for Two

So the sucker accepted, and a hand-picked delegation, consisting of Gus Axelsson, Kelso and myself, one night boarded a train for Canton. Our trip was financed, but not on a very generous scale. While Axelsson and I jimmied ourselves into one upper berth, Kelso slept comfortably below with the bust. (If he had had even the vestigial remains of a conscience, he would not have been comfortable.) But I was young, and the prospect of meeting a live Presidential candidate was enough to make up for all discomforts.

Arriving in Canton, we found our way to Major McKinley's home where I presented him with the bas-relief in a few as well-chosen words as I was capable of stringing together. He accepted in appropriate language and then we had a brief general chat. He was friendly and affable, as candidates are wont to be, especially before election, but I decided later that he had not made a profound impression on me.

During the interview, the editor of the Canton Evening Repository (still the leading newspaper of the town and then McKinley's favorite journal) was introduced to me, and I mumbled the assurance that I had been getting the "Suppository" right along, as indeed I had (free) because it was the party's official newspaper in that campaign. I was frightfully embarrassed by the unfortunate slip of the tongue, but not so Major McKinley. He enjoyed it immensely. The editor didn't, although he managed a sour smile.

The campaign was hard-fought and very exciting. Bryan set the country on fire, but he had no money. Mark Hanna had it all for McKinley. Never before had money flowed so freely. The precedent set by Hanna in 1896 was a bad one that has had a malevolent effect upon American politics ever since. He corrupted states that had been corrupt as a matter of course. I have never doubted that if the Democrats had been able to raise enough

money, even for legitimate purposes, Bryan would have been the new President.

Through a mutual friend, I rubbed up a very attenuated acquaintance with an editorial writer on the Chicago Record. He introduced me to the city editor who agreed that he would try me out as a space writer. That wouldn't cost the Record anything—at least anything worth worrying about—because I would be given no assignment that a regular staff man could cover.

This city editor wore a shiny Prince Albert coat, the collar and shoulders of which were white with dandruff from his too long hair. He had a forelock that he kept tossing mournfully out of his eyes. He gave me only one admonition and that was on no account ever to turn in a story in which I used the expression "old veteran." It was his conviction that a "veteran" was *ipso facto* "old," and that the two words in juxtaposition represented tautology at its worst. It took me many years to discover that a veteran can be a very young person indeed.

Equipped with this comprehensive course in journalism, I felt ready to tackle any assignment. I earned seventy-five cents of Victor Lawson's millions that first week. I confess that I did not feel I was substantially on the road either to wealth or to fame. Fortunately, I never had any desire for wealth—at least not such a desire as would lead me to make its acquirement the chief end and aim of my existence. And as to fame, I had never even thought of that. It wasn't until, ahead of my time, I sensed the possibilities for fame that lay in the achievement of the character which has forever since attached itself to me.

I managed to nick Victor Lawson for a few dollars each week thereafter—just enough to make it possible for me to live in the manner to which I had been accustomed. Could anyone have asked less of life than that?

Richard Henry Little, popular reporter on the Chicago Tribune, and later for many years to be its columnist, and Sherman Duffy, assistant sports editor of the same newspaper, that was still fairly decent and reputable, were friends of mine. I told them the Record cornucopia was willing to pour twelve dollars into my lap each week. With the irreverence of scoffing newspapermen, they referred to Victor Lawson as some kind of blooming skinflint and assured me that I could

do better on the Tribune. So to the Tribune, with their assistance, I went as a space writer. And I did manage pretty well. I earned \$35 one week, was equivalent to a king's ransom in newspaperman's language at the turn of the century.

I happened to be working for the Tribune when the occasion of the "Family Dinner" came along and I was invited to the feast, following the Tribune-hired men glorify the Tribune and its owners with slobbering eloquence. May I pause at this point to observe grinding my teeth the while—that recollection of "Count" Somebody-or-other who was a perfectly ducky society column for the Washington Times-Herald, said that I was fired from the Tribune for incompetence. Not only is it a base falsehood, but it assures the "Count" that I was at least giving a man's work.

A vacancy occurred in the post of assistant political editor of the Record which paper I had meanwhile returned to as assistant sports editor, and I applied for the position. So did Frederic W. Wile, soon to go to Berlin for the Laforet foreign service. I got the job because, doubt, the paper had other plans lined up for Mr. Wile.

### Climbing the Political Ladder

To be a political writer on a metropolitan newspaper was an opportunity to develop my unpleasant disposition to the utmost. There was nothing gentle about politics in those days. It was the plug-ugly, the heavy-handed manipulation of ballot boxes, the man who could get out the loot first and get to it the quick who was in the saddle.

On my new job I began to work with a really sizable vocabulary of barbed words and explosive expletives which I trained myself to mix judiciously and hurl at a convenient target. They have come in handy since.

At this point, it seems appropriate to slow down and indulge in a few generalities by way of summing up the peregrinations by which I was already grousing my way toward the top—a full-fledged curmudgeon.

It was becoming easier day by day to lay back my ears and bare my teeth at the sight of the fraudulent stuffed shirts who demanded a cleaning up of the city from the platform of Central Music Hall.

DON'T WORRY ABOUT  
*Vitamins G, P, P*  
You can't be alert, awake, "alive" without them! You get them—and the entire Vitamin B complex family in Ovaltine!

DON'T WORRY ABOUT  
*Vitamin A*  
Children need it to grow. You need it to fight off colds. With Ovaltine you get all the extra Vitamin "A" experts say you need.

DON'T WORRY ABOUT  
*Iron*  
Without iron, you can't have good red blood. Ovaltine supplies all the extra iron you need—in the way you can use it!

# Don't Worry

## ABOUT VITAMINS AND MINERALS

3 Average-Good Meals + 2 Glasses of Ovaltine Give the Normal Person All the Extra Vitamins and Minerals He Can Use!

Here's Why! Millions of people today know how important it is to take extra vitamins and minerals. So we want to make this point clear: Ovaltine is one of the richest sources of vitamins and minerals in the world.

In fact, if you just drink two glasses of Ovaltine a day—and eat three average-good meals including fruit juice—you get all the vitamins and minerals you need. All you can profitably use for health,

according to experts—unless you're really sick and should be under a doctor's care.

So why worry about vitamins and minerals? Rely on Ovaltine to give you all the extra vitamins and minerals you can use—along with its many other well-known benefits. Just follow this recipe for better health . . .

**3 GOOD MEALS A DAY + OVALTINE NIGHT AND MORNING**

**WARNING!** Authorities say you can't completely trust "good" meals to supply all the vitamins and minerals you need for good health—because even with careful meal-planning—because shipping, storing and cooking reduce the vitamin-mineral values of food. So rely on 2 glasses of Ovaltine a day for all the extra vitamins and minerals you need!

DON'T WORRY ABOUT  
*Vitamin B<sub>1</sub>*  
You eat poorly—and you're tired, listless, nervous, "low"—if you don't get enough B<sub>1</sub>. The Ovaltine way, you get plenty!

DON'T WORRY ABOUT  
*Calcium and Phosphorus*  
They're vital to bones and nerves in adults—also to teeth in children. The Ovaltine way, you have loads.

DON'T WORRY ABOUT  
*Vitamin D*  
You get D from sunshine—but most of the year most people don't get enough sunshine. Rain or shine, you're safe with Ovaltine!

*But No!*  
Don't think vitamins and minerals are all Ovaltine gives you. It is prescribed the world over by doctors as a special dietary food and as a mealtime drink.

## WANT A MANHATTAN WITH MORE FLAVOR?

Introduce yourself to a bottle of Fine Arts Whiskey. Then you'll meet up with the "multi-blended" whiskey. Yes! Golden-smooth whiskies tenderly blended with other deep-flavored whiskies... "multi-blended" to perfection for rare flavor and aroma! And all whiskey—all 5-years old!

# FINE ARTS

THE BLEND OF  
5-YEAR OLD STRAIGHT  
WHISKIES—90 PROOF

Distributed solely by  
Canada Dry Ginger Ale, Inc., New York, N. Y.

Sunday night, and who sneaked into the mayor's office on Monday to whisper to Hizzoner that it would "hurt business" if he interfered too much with gambling and prostitution. The pious cheats who slipped loose change into the prehensile fingers of their aldermen in consideration of "just a little" violation of city ordinances were gradually warping my disposition and drying up my soul.

Let it be here noted, with me as its authority, that undoubtedly the surest and most direct road to curmudgeonry is labeled "Politics." Take this road and stay on it, and you will arrive—you may not be any place when you get there but you are almost sure to have an ugly temper to show for it.

From assistant political editor on the Record it was just a step to a full-time job in political campaigns, handling publicity, making speaking engagements for my candidates, running the office—in fact doing everything but being the candidate. I was a sort of one-man-band affair, and every piece that I played, it seemed, went sour on me at election time.

### Teddy Returns from Africa

It was in 1911, after Carter H. Harrison, with "splendid" Republican assistance had defeated my candidate, Charles E. Merriam, for mayor, that Teddy Roosevelt returned from a big-game hunting trip, to the serious disappointment of those Wall Street gentlemen who had hoped fervently that some lion would see his duty and do it in the wilds of Africa's jungle. Roosevelt's teeth were gleaming and sharpened to a razor edge for a rare cut from the anatomy of his "friend" William Howard Taft. And how the country yearned for him!

It wasn't any time at all before seven governors—all of them Republicans—called on him to plaster the man whom he had kicked upstairs into the White House, and to insist that he go after the Republican nomination in 1912. I wasn't a governor. I wasn't so much as a constable. But I was for Teddy. I always had been and I always would be as long as there was a Teddy (no junior for me!) for whom to be.

The treacherous Republican organization had licked Merriam in 1911, but the victory was a costly one, for surviving the defeat was the best organization of irregulars Chicago has ever seen. It had even stretched itself out into the state. However, the real strength of it was in Chicago and Cook County, and this organization had been built up from the ground by the adolescent curmudgeon, Ickes. It consisted mainly of aggressive young men—and women, too—who had a sense of political frustration and were looking for thick-necked, heavy-featured ward heelers to smash and claw.

Merriam (one of the two men I had hoped one day to see mayor of Chicago; John Harlan had been the other) and I saw eye to eye, as we had done since first we formed a political alliance, and it is only fair to say that this organization belonged to both of us. But I had knitted it together and built it up because I had had more experience and was more deft at that sort of thing than Merriam. He had his own important jobs in the alliance that he could do far better than I.

I had an interview with the Squire of Oyster Bay in his office where he did his writing for the magazine Outlook. I told him what we had done in the Chicago mayoralty fights—how we had struggled to put, first Harlan, and then Merriam across, only to be beaten by the lawless and the unprincipled elements of all parties, including the Republicans. I was proud to report to him that we now had the so-called regular G. O. P. organization on the run and that a punch by him would be timely. I relayed to him what we

thought he ought to incorporate into the Auditorium speech which he was scheduled to make.

As Roosevelt was going to Chicago in a special car, he invited me to ride with him. We had breakfast together—just the two of us. Malicious stories of the colonel's alleged intemperance were circulating freely—a slander that was the coin current of desperate Republican politicians who would rather have lost with Roosevelt than have won with someone else.

And if you don't know, my more or less gentle reader, it is time you discovered that the most vehement party man—the one who beats his breast (in public, of course), for the dear old party—is the one who more naturally slanders and traduces and smears fellow party members if he suspects that they are at all interested, either in the cleaning up of the party itself, or in trying to establish a better quality of public service. (I insist on sticking it in here that a curmudgeon doesn't fight that way. A curmudgeon has his pride.)

Stories of the colonel's bibulousness were common talk. I had never been at a table with him, nor had I ever been with him when one would naturally take a drink. Therefore, I had no knowledge as to whether he was the sinner they said he was. I did not much care. I was interested in Roosevelt and the speech he was going to make which, I suspected and hoped, would tear the hide off of the hypocritical Republicans. I knew too well, and contemptuously, let me add, the booze-soaked gang that was opposing him.

But as I sat through the meal and saw him eat in succession fruit, a huge bowl of oatmeal, an enormous white fish and what looked like an oversized platterful of potatoes, all punctuated generously with toast and washed down with several cups of coffee, I concluded that the story of his excessive drinking was a canard. No man given to hang-overs could have surmounted such a breakfast, much less eaten it with zest. For one anxious moment, I thought that he was going to repeat the order.

### The Colonel in Rare Form

It was a great meeting, with the colonel at his best, denouncing the political bosses and the big interests that were seeking to deny the rank and file of the Republican party the chance to nominate their own choice for President. This meeting determined the result in Illinois so far as the primary was concerned, but in the end, the money and influence of big business carried the day for Taft, and he was nominated for the job of going into the election and taking a good licking from Woodrow Wilson.

My enthusiasm for the job of winning with Roosevelt held over, and I believed that we held the balance of power in the country and that we could lick the Republican party again in 1916 as we had in 1912. I was confident that the G. O. P. could not survive it. But treachery was at work. George W. Perkins was getting ready to betray the party for his own advantage—but all of this has been written elsewhere and won't be gone into again.

Suffice it to say that in the 1916 convention, which was held in Chicago, although we took it away from Perkins and nominated Theodore Roosevelt as our candidate, we were really performing the last sad obsequies of the party. Roosevelt quit us cold. He gave the impression that he didn't want to waste much more time on us.

What an experience for one who had already collected too many cherished souvenirs of personal selfishness, questionable maneuvers, and political treachery! But what a priceless school for one who aspired to be the best hated man in America!

(To be concluded next week)

## KEEP IT PERKING WITHOUT JERKING

No—giving your fountain pen the "degree" won't restore its youth. But fix it properly usually will.

Your swanky fountain pen is still a little "looker," isn't it? And wasn't it a perfect performer the first few months you owned it! Then perhaps a kind of "creeper paralysis" set in, and soon your hand-penned rated not much higher as a writing instrument than the decrepit specimens found in some country postoffices.

ONLY ONE PERSON IN 5,000 KNOWS HOW TO FILL ANY FOUNTAIN PEN PROPERLY

An Inkograph Pencil Point Pen will give perfect satisfaction and maximum service for many years, equal to what you would expect from the highest priced fountain pen—provided you use it properly. If you haven't received our instruction sheet from your dealer, explaining the correct filling and care of an Inkograph, send us a three cent stamped self-addressed envelope, and we will mail you one.

Follow Noted Ohio Doctor's Advice  
Relieve CONSTIPATION!

If liver bile doesn't flow freely every day your intestines—constipation with its aches and that "half-alive" feeling often result. So pep up your liver bile secretion and see much better you should feel! Just try Edwards' Olive Tablets used so successfully years by Dr. F. M. Edwards for his patients with constipation and sluggish liver bile.

Olive Tablets, being purely vegetable, are wonderful! They not only stimulate bile flow to digest fatty foods but also help eliminate. Get a box TODAY. Follow label directions.

## The Voice of Courage

Continued from page 31

own, she developed the muscles to carry her voice from that position. Fifteen months after the original program, a month later she gave a performance at Town Hall in New York.

The best way to prove that the present report about Lawrence is not mere publicity is to quote Variety, a publication so severe that it would cut the throat of a comedian if his jokes fell flat: "The soprano has gained immeasurably in the two-year rest. One of the greatest voices has gained in freshness and purity of intonation, is tremendous in appeal and appealing in its richness and depth."

Lawrence's theories on sympathy are slightly complicated. She has been touched by the expressions of good will she has had from everywhere, but she knows what she has to do to

don't get anywhere if you're sorry

by the Paris Opera immediately. At twenty-five, she was singing the big Wagnerian roles and filling in with everything else. Her success was so great that she was brought over to the Met by Gatti-Casazza in his last year, 1935, went back to Paris again, sang at Bayreuth to German enthusiasm, had a season in South America, and then settled at the Metropolitan permanently.

She was the youngest star ever to sing Brünnhilde at the Paris Opera or at the Met and she added to the excitement of the affair by insisting on riding the horse into the flames instead of leading him in, as other faint-hearted divas had done before her. This added very little to the artistic success of the opera but pleased some vague bush-country pride of her own—and didn't make bad publicity copy.

"It caused almost as much stink as when I did Salome," she says.

The French found her Salome great stuff, and the Met brought it back into the repertoire so that she could do it here. She is the only singer in history to do a complete repertoire of the great French, Italian and German dramatic soprano roles while still in her twenties.

"A brain like a sponge," she says. "When I used to have mathematics in school, it never was a question of figuring anything out. I just memorized the whole book."

She has bronze-colored hair, just on the verge of being red; a most remarkable pair of bright eyes—and the aforementioned dimples and hilarious laugh. She speaks in a clipped style and has a tendency to make two words out of one. Of her illness, for example, she says, "It was a question of it get-ting me down or me get-ting it down."

### A Lady of Determination

The chances of anybody discouraging her now are remote, and the possibility that false modesty might hold her back is also fantastic. When friends asked her to luncheon at a swanky restaurant in New York, she showed up in her wheel chair and proceeded from the front door to her table with all the aplomb of a Vanderbilt addressing a brakeman. She utterly cowed old dowagers who sought to reproach her by icy glances through lorgnettes.

"Who am I to be finicky?" she cried. "Sarah Bernhardt acted for years with a peg leg."

But this is not to say that she is inhuman about her troubles. When the customarily staid audience at the Metropolitan endeavored to knock the roof off with its bravos and stompings, it almost unnerved her.

"Say-y-y," she explains, "that place is my second home. If they still like me there, I'm all right."

She finds it no trouble at all to get around, and when anxious friends worry about her fate in taxis and trains, she scoffs.

"The worst that can happen to me has already happened," she says. "I get bounced into a cab and bounced out again. What's that?"

As a consequence, she has been appearing madly at benefits for hospitals and relief funds, and for service men's canteens. The only tough time she had was in Philadelphia where the canteen was in a cellar reached only by a long, narrow spiral stairway. There's a touch of awe in her voice when she mentions it.

"I didn't know that time whether I was going to land on my head or on my grand finale," she says ruefully.

What we started out to say was that the whole thing is an amazing story. Are there any disputes?

THE END

P. Ballantine & Sons, Newark, N. J.

he American found some strangers in his room in Rostov. They received him cordially—and made him the gift of his life

"IT DOESN'T make sense," said the one with the newspaper, "and it can't make sense."

There were five of them, who had got off at the junction, connect with the Washington train, which would dine on it. It was an hour and a half late. They were standing around smoking and mostly listening to the big guy who had been yelping about priorities. He was reading the afternoon edition of a Cincinnati paper.

"This kind of a communiqué gets my goat," he said. "It's a thousand miles of that Russian front, and a couple of million men stacked up on either side of it. All right. And what kind of a communiqué do those guys give us? 'At Stalingrad, two buildings were captured and a battalion of the enemy destroyed.' Two buildings! Are they kidding us at Moscow, or are they kidding us up, with this talk of two buildings, in a global context?"

"They are not kidding us," said the man in the raincoat. He was a heavy, grayish chap, on the tired side and close to fifty. His bag, an old one, had a flock of labels nearly scraped off.

"They're not," the big man retorted, "how does it make sense? They tell you any reasons over there?" he asked sarcastically.

"No. But I saw something."

SHAYNE WAS in his room, on the third floor of the Bolshaya Hotel (he told them). His name was Shayne, and he had left this bag along with his papers in his room at the Bolshaya, which was the best hotel in Rostov-on-the-Don, nearly in the autumn of 1941.

The reason he had left the stuff behind was that he had gone up beyond Pyatigorsk toward the Hot Springs to examine the mineral springs and salt beds there. He was practically camping out in the mountains, and since he didn't speak Russian he heard little of the war one way or the other. It was quiet enough around Pyatigorsk then.

Shayne, a chemist, carrying out a semiofficial inspection of the mineral formations there, north of the Caucasus, was one of the very few Americans left in the land of the Soviets at that time.

When he told the Intourist girl at Stalingrad that he wanted to go back for his stuff at Rostov, she said it would be difficult. She arranged his transportation, and she always said it was difficult.

"Why so, now?" he asked.

"The Germans are there, at Rostov."

Shayne thought that one over. "Boloney," he said. "I haven't heard of any Germans nearer than the Dnieper, and he figured the girl was trying to get out of something for him, as usual. She was mad at him, anyway, because she had been recalled from some nursing unit to interpret for him.

Of course she only understood English the way it was written in grammars and Shayne had to explain what he meant by boloney.

"It is impossible now," she said, in her singsong way, "for you to go to Rostov."

"Impossible!" said Shayne. Nothing was impossible if you tackled it, and maybe took a chance. He'd never done anything impossible, in his life. This took a lot of explaining for Catherine to understand. He called her Catherine the Great for short, because he couldn't pronounce her Russian name.

"Impossible," said Catherine the Great thoughtfully. She brightened up all at once. She had been worried all the time, although Shayne knew it wasn't about her. Her thin face softened under its thatch of straw hair. She really looked pretty, then.

"You want to proceed?" she asked anxiously.

"I want those papers of mine."

Just then Shayne's letters and notes and personal stuff seemed mighty important to him. This war was something new to him, and he hadn't had to leave any of his own personal stuff behind as yet. He wouldn't have lost those papers, left in a bureau drawer in his room for a million dollars. That was what he told Cath-

erine—papers—you mean documents?"

Shayne let her pick her own word for them. He forgot for a moment that to Catherine a word meant what

it said it meant in the dictionary. The upshot of it was that she believed he had left important documents worth one million United States dollars in the bureau of Room Three of the Bolshaya Hotel, Prospekt Engelsa, Rostov-on-the-Don.

Something clicked in the mind of Catherine the Great, and she nodded. "We will go there," she said. Which was her way of saying okay, we'll roll.

**M**OST guys in America (Shayne commented) are forever wondering about these mysterious Russians. The trouble is, most of us are trying to think of some one brand of Russian, shaven or hairy—some genus Muscovite. We might just as well try to think of the kind of North American represented by a Navajo, a French-Canadian timberjack, an Iowa hog raiser, and a Los Angeles income-tax payer. Only Soviet Russia, having a lot more territory, has a lot more varieties than we have—a hundred and thirty or so. Shayne found the individual Russians easy enough to get on with, in their own locality, except that he couldn't talk to them.

Catherine, for instance, acted like any tough-minded high-school graduate, without stockings, and with only one dress she'd made herself out of a picture of New York fashions. She bummed his cigarettes, she quoted things out of books, and at times she went off into giggles for no reason at all. But she had something on her mind all the time.

On the train to Rostov she asked him what was the book of instructions in the United States about feeding and bringing up children. Shayne didn't know that one.

For the time being, Catherine was working, all out, to land him in Rostov. She got two places on the first category car on the train, although it was jammed with officers. She got smoked salmon and bread and preserved grapes, and plenty of hot *chai* for him to eat. She only tasted some of the grapes, when he made her.

When they left the train, Shayne saw an armored car sitting on the siding. Catherine argued, and got them two places in an auto, although the officers had to squeeze over for them. "I said," she told Shayne, "you have United States documents worth a million dollars waiting for you." She was very much excited. She kept looking around on both sides of the car, at the soldiers along the road, and there were plenty.

Shayne wasn't paying much attention to her, then, because he was listening. Along the sky line, he heard the growling of heavy guns, and he had not heard that since he was in the Argonne Forest in 1918. September and October, 1918.

Ahead of the car smoke or an autumn haze hid the city, which didn't seem to have many high buildings in it. Shayne felt a crawling in his legs and up the back of his neck. He could almost feel the weight of a pack on his shoulders. Those were heavy guns, and he thought the Jerries were in the city, all right.

**T**HEY got out of the car at a row of houses on a paved street. Catherine kept asking the sentries for something that sounded like *Chigornik*, but no one seemed to know anything about that. They wanted Catherine and Shayne to turn back, only the girl argued fiercely, and got the two of them taken to a PC where a bunch of men without helmets sat by a telephone. Shayne could close his eyes and think he was back in a dugout PC near Montfaucon. It smelled just the same. Catherine did a lot of talking, and at last they paid attention to her.

"Now it is arranged for you to proceed," she explained to Shayne, "only I am prevented. I must stay here."

"Where is here?" he asked.

Catherine didn't want to say. She looked around and pointed at a truck, over on its side. It had burned. "Here," she said.

Then she thought of something. Off a bit of blank paper from the sheet she carried, she wrote something in Russian letters, which do not say what they say. Finding a pin, she pinned the paper on Shayne's coat lapel.

"What's that for?" he asked. Listening to heavy machine guns scolding off a mile or so away, and he was beginning to feel cold inside. In 1918 he had heard that, you weren't far from the lines.

Catherine chewed her pencil. "How you are Yamrican," she explained. "But you must not forget to come here. I will wait."

When the officers noticed the presence of Shayne, they grinned. He wondered what was funny about being an American. Two bits he would have backed going for his stuff. But Catherine made such a fight to get him up front, he hadn't the nerve to tell her off. She seemed pleased with him.

"You will have a guide," she said. "And soon they will send someone who can speak English. Only please, to speak good English, the do, or he will not understand."

"Okay, sister," said Shayne, as the trucks rumbled by. His throat ached, and his knees ached.

A big guy carrying two helmets and a pistol and a flashlight on him, and Shayne one tin hat and gas mask.

a crooked nose and he laughed when he spotted the writing on Shayne's coat.

"Call him Kunak," Catherine told Shayne, "and do what he says."

Kunak smelled like a garage and plant in one. He took Shayne around behind the wrecked truck where a man was open in the street. A ladder leaned into a big sewer.

"Da," said Kunak and went down the ladder, motioning for Shayne to follow.

**D**OWN in the drain, they had to wait and pretty soon the gas got so bad they put on the masks. It wasn't chemical but ordinary illuminating gas from mains somewhere. Shayne kept sweating with the muck underfoot and darkness. Kunak was so sparing with the battery in the torch, he only turned it when he fell over something. Shayne was heading toward the center of the city. Once he felt the building cave in over him. The going for a long time, until Kunak's light flashed the light on the side of the sewer.

He flashed it three times, and saw a hole dug in the side, leading through this crawl hole he found Kunak up a slant to a place where light was gray and he could stand. Someone took off his mask. He looked around and discovered that he was in the lobby of the Bolshaya Hotel.

It hardly looked like the place left a month before. A dozen soldiers stood around on sacks and boxes, some watching him, some asleep. Boxes were hung across the windows, and some of the furniture was piled against the door. A light machine gun stuck out of the porter's counter.

He didn't have a chance to notice more because Kunak talked to the nearest him, and they all came up to Catherine's writing on the paper coat. They grinned when they read it.

"What's so funny?" Shayne demanded, feeling sore. No one answered. Apparently the man who could speak like Catherine wasn't there. And he felt more than sore. The climb through the sewer and the silence of the place where the men padded about scraping their feet worked on him. He wanted to get out of there quick. He started for the stairway, to get him down from the third floor, and mo-

Kuk caught his arm, and said, "Niet!" which meant no dice. So Shayne indicated signs that he wanted to go up to the third floor. Kunak nodded. That was jake for him. Instead of using the stairs, he slid the door of the elevator shaft open. The elevator wasn't working, but Kunak began to climb up on a ladder, and Shayne followed. When they came to the third floor, the door was open. Kunak said something that sounded like *Chigornik*, and pushed Shayne out, before climbing out to the third floor and motioning for Shayne to follow.

The first thing Shayne noticed on the third floor was a light machine gun behind a net of sandbags in the dark corner where the stairs led down. Two men squatted behind that machine gun, and they were asleep.

When he saw, hanging up on the post where the stair came down, a bunch of men. The light being bad he couldn't see, but he thought he spotted a trip across the steps running up to the stairs and he began to understand why the way was no safe thoroughfare. But he didn't understand all this hush-hush. He started to crawl toward the door of Number Three, which had been his room in the center of the landing, Kunak told him again. The big guy made him crawl into Number Four, which was the next room, and in the corner—being three bedrooms on that side of the floor.

Number Four had the furniture all against the walls, and the windows were covered with blankets. Shayne noticed odd-looking equipment stacked in the room—pickaxes and rope, ammunition boxes and an artificial arm in a sleeve, the hand being covered with a glove. There was also a big box of grenades but not a rifle any-

where a soldier at a loophole had a machine gun and another man sleeping on the floor. He spotted another loophole, where the pickaxes had been removed, and he went out of it.

The Bolshaya was the last building in the block, he had a pretty good view of the street and intersection. It was empty. From him most of the windows were boarded up, or otherwise covered. The two doors of the office building opposite were open. But nobody moved across the street.

The silence of the street worried Shayne. It didn't make sense. A soldier stepped behind him, and began to talk. What he said sounded familiar, and Shayne recognized Catherine's brand of English: "I-am-first-category-English-speaker."

The basic English speaker had two gold teeth where they showed up well, and he breathed heavily as if he had been running. Also he had traces of the sewer in his breath. "You-discover-documents?" he asked.

Shayne started to explain that they were in the next room, when the basic English speaker motioned him to be quiet. "Gairmans over there laterally," he said across the street. Then he pointed toward the street. "Gairmans situated vertically on the street."

Shayne looked at him. The English-speaking soldier was not kidding. He explained that some of the enemy held the street and had worked their way down to the floor above last night. While he was talking, the street below burst into an uproar.

Bullets spattered across the Bolshaya's floor like wind-driven hail, and Shayne began to take a look out of the loophole. Some of the windows opposite cross the street was searching the apertures in the wall. Also the street below was full of

smoke. It came from burning oil drums that Shayne hadn't noticed before.

Through this smoke screen he sighted the running figures. They were coming like a backfield in motion, keeping low, from the two open doors across the way. They were rushing the Bolshaya entrance under a solid stream of fire about four feet above the pavement.

Bullets beat across the loophole, and Shayne ducked. He sat down against the wall, the way he used to back up against a parapet, and he thought: Why, those guys are Jerries, and where they are heading in is the Bolshaya Hotel.

He listened carefully, to try to figure out what was happening below, but the overall racket pounded at his ears. Presently it stopped, not gradually but all at once. He waited, and the other guys were quiet. "What happened?" he asked the basic English speaker.

A tall Soviet soldier stepped into the room. He was young, and looked like a farmhand. He had field glasses slung short at his neck and he gripped a grenade in each hand. Whether he was an officer or not Shayne couldn't tell, but the others perked up when they saw him.

"Chigornik," said Kunak, and patted the tall man's shoulder.

Chigornik beckoned them over, and they went into a huddle like a team. The English speaker explained to Shayne: "What happened is not good. The Gairmans now occupy the street floor."

Shayne figured on this a moment. His crowd was cut off from the roof and from the underground sewer. As for climbing out of a window, that would be the perfect way to commit suicide. When Shayne figured up his chances of getting out, he decided they were nil. The soldier seemed to think so, too, because he said regretfully, "They have too many fire implements."

It seemed to Shayne that Chigornik ought to be thinking about how to surrender. He had eight men in the hall and one room, with only two light quick-firers, and he was completely enveloped by a flock of Germans with plenty of equipment.

Wiping the sweat out of his eyes, Chigornik proceeded to act unexpectedly. He pulled the water drum away from the wall, and Shayne saw that a hole had been cut through the partition into Room Three. It was down at the floor, a man-sized mousehole.

For a moment Chigornik listened at the hole, then he squinted through it. Getting the artificial arm with the gloved hand, he shoved that into the mousehole. Nothing happened.

QUICKLY the tall boy crawled through the hole into Shayne's old room. Another soldier followed. Then Shayne's mouthpiece nudged him. "Now you go and recapture the documents and million dollars."

Shayne swore to himself. But he eased himself through the mousehole. His room looked pretty much the way it had when he left it. Only Chigornik was lying on his back on the rug watching the ceiling with great interest, while the other soldier squinted through a second mousehole dug in the farther wall. Shayne thought that these fellows had been careful to fix up this whole floor in case they had to defend it. And he understood why they watched the ceiling. If a German opened up an eyehole anywhere in that ceiling and sighted them, they would collect a burst of bullets. Because a slug of any kind would go through those flimsy partitions and floors.

He heard things moving above, very faintly. Chigornik had a pistol but he didn't take a crack at the ceiling with it. And Shayne knew why. Two shots, and the men on the floor over them would catch on to the angle the fire was coming from, and would loose off with their own

## Are you the Barrymore, Cummings or Montez type?

**BARRYMORE?** Diana, now appearing in Universal's "Nightmare", is the type that appreciates a cigarette that's gentle to her throat. "Regent is wonderfully mild!", she says. And Multiple Blending—a Regent exclusive—is the reason why!

**CUMMINGS?** If you're Bob's type, you'll go for the Regent crushproof box. He avers it "never crumples the cigarettes... keeps pockets tobacco-free." Yes, and you'll agree with this star of Universal's "Between Us Girls"—it gives you "a cigarette that's always in top-notch smoking condition".

**MONTEZ?** Maria's the type that believes in getting the most for her money. "Regents give greater value", she points out, "because their King Size means a smoke that's over 20% longer!" She's as right as she's lovely—and when you see her in Universal's "Arabian Nights", you'll know what we mean!

**ALL THREE AGREE...** that Regents are better tasting! Reason: They're made only with choice Domestic and Turkish tobaccos, specially selected for finer flavor. Next time, try Regents—always so mild, so gentle to your throat. Regents cost no more than other leading brands.

Quality tobaccos... Multiple Blended  
make **REGENT**  
The milder, better tasting  
cigarette!

# SAY, FOLKS— DOES THIS QUIZ STUMP YOU?

## Q. WHAT DOG FOOD IS NOW BETTER THAN EVER?

*Rollo St. Bernard:* Red Heart! It's the same good, wholesome dog food—with moisture removed by genuine dehydration so that one carton of Red Heart Dehydrated equals 2½ cans of canned Red Heart in food value.

## Q. DOES RED HEART DEHYDRATED DOG FOOD HAVE APPETIZING TASTE VARIETY?

*Flossie Pekingese:* Certainly! You still get the taste variety that dogs "go for" in a big way—3 delicious flavors—beef, fish, and cheese.

## Q. WHAT DOES DEHYDRATION DO TO THE VITAMINS IN RED HEART?

*Bill Boston:* It saves 'em. Red Heart Dehydrated now contains more vitamin benefits than ever because it is dehydrated by the slow, low-temperature method.

## Q. HAS RED HEART DEHYDRATED BEEN THOROUGHLY TESTED?

*Don Boxer:* Yes sir! It's laboratory tested and kennel proved. Tests show that dams maintain weight during lactation and puppies make remarkable gains on a diet of nothing but Red Heart Dehydrated.

## Q. IS RED HEART DEHYDRATED CLEAN AND WHOLESOME?

*Boots Cocker:* Only federally inspected meats and meat by-products are used in making America's most popular dog food.

## Q. IS RED HEART DEHYDRATED EASY TO FEED?

*Pat Setter:* Why you just add water! Red Heart absorbs it in a few seconds. No waiting! No fuss! No bother!

# RED HEART

## THE GENUINE DEHYDRATED 3-FLAVOR DOG FOOD

### COSTS LESS!

Each big 12-ounce carton equals  
2½ cans of canned Red Heart in food value

BUY ALL 3 FLAVORS AND FEED IN ROTATION

### NOTICE!

In spite of tremendous processing and packaging changes, everything possible is being done to hasten distribution of Red Heart DEHYDRATED Dog Food. If your grocer does not have it please be assured that we will do our level best to supply him as soon as possible.

Apparently they were still guessing the Soviet guys were.

case of spotting your enemy, in room-to-room kind of warfare, and being him to the trigger. The only cheered Shayne any was that and his squad mates seemed to way around . . . he reflected it mean as much to the Jerries to hotel at the end of the street as Ksskys to hold the outlet of their n.

Chigornik was looking at him and talking on the mousehole behind them. A speaker interpreted: "He says, the young woman who wrote

was puzzled for a moment. Then he remembered Catherine's paper pinned. At the other end of the sewer,"

Chigornik heard that, he smiled at Shayne's shoulder.

When the Germans above cut loose with stuff, Shayne only heard the re, and saw plaster dust cascade. He got back through the mousehole but he didn't feel himself move. Not to his feet still alive, before he that the German fire was traversing. Three from two angles—oblique

Chigornik crawled after him, bleeding the trouser leg. The other guy slow, and Shayne knew he was under that cross fire from above in Room Three would be dead. The Germans must have been above the two end rooms and their fire into Shayne's old room.

When the firing let up, Chigornik, he shoved the water drum over the mousehole opening. Then he and there listening, watching the Shayne held his breath until his roared. Not one of the Russians said anything.

Shayne could hear things again, that men were moving close to nothing came through distinct, but he felt as if a weight were put on his back. The sounds came from their, and that meant the men were in room.

Sweat dripped from his chin while he held his breath and listen. He A whole platoon of Jerries may get away with automatic weapons. His nerves could stand this kind of thing. Here he was with the four waiting like clay pigeons to be by the machine guns. It was a certainty that the Jerries would traverse this with bullets before trying to Pete's sake," he muttered, "open they do."

Chigornik didn't understand. He touched the American's arm, and pointed at the

door. It was open. He shoved Shayne toward it, motioning for him to be quiet.

Moving one foot at a time, Shayne made his way out the door. He remembered how he had once moved up to Montfaucon in the night, walking over solid ground lighted by shell bursts here and there, with a rifle in his hands. And here on the third floor of the Bolshaya he wished he were back at Montfaucon.

It was quiet enough in the hall, with those two Russians still crouched over their machine gun, behind the sandbags. Probably with the stairs mined two ways and all, neither side was making any attempt to rush the halls. Shayne climbed in behind the sandbags.

He could breathe easier there, but he felt like a man blindfolded waiting for a rifle squad to execute him, backed up against a wall. Through the door he saw the Russians in Room Four huddled around Chigornik as if he were calling off a new signal. They separated, climbing up silently on the bureau, the table and bed.

Shayne prayed that they would open up with their machine gun and pistols. They crouched motionless as listening animals—Chigornik's eyes shifting, his face pinched and hard. He was on the bureau beside the mousehole. Leaning down, he gripped the top of the water drum and slid the thing back a little from the hole. Shayne thought: *He can't be going in there—*

The crash of the firing made Shayne yell. Plaster dust puffed out of the wall around Chigornik, and splinters shot up from the furniture. The beat of the bullets was only a few inches above the floor. The Germans were traversing very low, to dispose of anyone lying or standing on the floor. Only the Russians weren't there.

Kunak was hit by a ricochet, and shots tore into the sandbags in front of Shayne. Then the blast of fire stopped. A haze of dust filled Room Four. Water spurted from holes in the pierced drum.

As Shayne watched, that drum began to move, an inch or so. Someone inside the hole was moving it. Simultaneously, Chigornik shifted his hands. He held a grenade, and he pulled the lever.

"One . . . two . . . three," Shayne counted, his eyes on the grenade. Again the drum moved, and the big Russian swung his arm down, slipping the grenade back of the water drum, through the mousehole. "Seven . . . eight," Shayne counted. And the grenade exploded in the other room. Immediately Chigornik bowed another through the hole and it cracked off.

Metal clashed and a voice whined somewhere in Room Three. Then the machine gun beside Shayne jumped into life, its roar filling the hall. Down the hall, a figure holding a Luger pistol slumped out of the door of Room Two, the door swinging open under pressure of the man's body falling.

From the door by Shayne, Kunak

crawled, a grenade in his hand. Pressing close to the wall, he scrambled to the body of the German. The machine gun kept up its chatter over his head, until he swung his right arm wide, flipping the grenade into the end room. When it crashed he made a sign, and the gun quit firing.

Kunak listened for a moment, then carefully picked up the Luger. He seemed to know how to work it. Putting his helmet on the end of it, he edged it into the open door. When nothing happened he put the tin hat back on his head, and looked into the door. He beckoned to the other Russians.

The Jerries weren't doing any more fighting on the third floor of the Bolshaya. Most of them were killed. Shayne saw how they had come into the room down the hall, by a rope ladder from the roof, through a window.

THE basic English speaker looked over the prisoners curiously. "They must be new men—they were impatient. They allowed us to ascertain their position before they discovered ours. Is position the right word?"

"Yes," said Shayne.

"You were not impatient. You waited."

"Yes," said Shayne. He thought how the Russians had waited out the others. They were pleased because they had some good weapons now, and it was growing dark.

When it was really dark, he heard action down on the street floor, but that seemed far off. He sat in the hall with Chigornik. He felt numb. But the wounded Russian was patiently investigating the mechanism of a captured pistol by touch.

Hardly had Shayne noticed that the third floor of the Bolshaya Hotel was quiet when he heard three quiet raps that seemed to come from the floor. Chigornik whispered something, and an answer came. Then figures climbed out of the elevator shaft.

They were Russians, and they had surprised and recaptured the ground floor of the Bolshaya—through the sewer. Now they were relieving Chigornik and the injured Kunak.

When Kunak was ready to go down the ladders, he carried a small heavy bag, which he gave to Shayne.

"The documents and the million dollars," the English speaker explained, "deposited safe in bureau." Shayne had forgotten about his bag.

Carrying it back, through the sewer, he heard Chigornik whistling behind him. The young Russian kept within reach of the American, following him out past the burned truck to the PC with its candle and telephone.

But Chigornik didn't report at once to the officers. He looked around, until he found Catherine the Great asleep on a bench. He looked at her a moment, smiling. Then he picked her up in his arms and she woke with a start. When she saw his face she reached up her hand and touched it as if afraid she were dreaming. All of a sudden happiness flooded her.

Behind Chigornik she saw Shayne, with his bag. "He is my husband," she told Shayne. "I knew he was with the Rostov forces, but I thought it would be impossible to see him."

She hugged Chigornik. "But then," she explained in her schoolgirl English, "you stated that nothing was impossible if I kept trying and took a chance. So I came as far as I could, and then I wrote my name on you."

RUSSIAN girls, Shayne said, were pretty much like any others. The big man who had been reading the Moscow communiqué folded away his paper. "That was one floor," he said, "and how many men? Eight or ten? Well, two buildings and a battalion must have been something."

THE END

## WE DON'T TALK ABOUT TOILETS!

An unsanitary toilet is "unmentionable" in any household. It's unnecessary too. Ugly film and stubborn stains are removed easily and quickly with Sani-Flush. No scrubbing. Every time you use this scientific compound you clean away many recurring toilet germs and a cause of toilet odors. Do it at least twice a week.

Don't confuse Sani-Flush with ordinary cleansers. It works chemically. Even cleans the hidden trap. *Cannot injure septic tanks\* or their action and is safe in toilet connections when used as directed on the can.* Sold everywhere. Two handy sizes.

### FREE\* For Septic Tank Owners

Septic tank owners don't have to scrub toilets, either! Tests by eminent research authorities show how easy and safe Sani-Flush is for toilet sanitation with septic tanks. For free copy of their scientific report, write: The Hygienic Products Co., Dept. 27, Canton, Ohio.

ED GRAHAM

# By Any Other Name

By D. D. Beauchamp

ILLUSTRATED BY WALTER HERRINGTON

Tibaux wondered if Bogart had flown before. A knock-out answered his question

THERE was nothing about him to distinguish him outwardly from the rest of them, except possibly that his face looked a little older, a little more finely drawn. Aside from that, he was merely a member of a group, assembled in the same manner and for the same purpose as the rest. Private Umpteen-something-or-other, Air Force Enlisted Reserve, a cadet flier under the C.A.A. War Pilot Training Program.

He was of medium height and medium build, dark skinned and black haired, with alert, steady eyes, and a nose that was not too obviously broken. His name on his enlistment papers and on his identification card was James Edward Martin. The name belonged to him no more than did eight of his front teeth, which he had lost originally by banging his face into the instrument panel of a cracked-up plane. The teeth in their turn were no more false than the birth certificate he had presented for induction into the Army, or the statement

he had made on his application—Previous flying experience: None.

His real name was John Wesley Bogart. He was thirty-four years old, and for seventeen of those thirty-four years he had been a flier. He had four thousand and some-odd hours in his log book, an instrument rating, an instructor's rating, and an aircraft rating: 65 to 1,250 h.p., single-motored land and sea. Those little mementos of his past he had built into a small and brisk bonfire a month before, at approximately the same time he had shaved his mustache and adopted the name of Martin.

The reason for being where he was and for having done the things he had done was extremely simple. It lay in his C.A.A. record, a concise and impersonal account. There were a number of minor offenses listed, several temporary suspensions, and finally a permanent revocation of his license. All together, it meant simply that if he wanted to fly with any official sanction, he had to start from scratch under a new name. He wanted very much to fly.

He had been enrolled in the school for two weeks and so far, he considered, he had been lucky. Bad weather had kept them grounded, and it was easy enough to

fake ignorance in ground school. The part that scared him was the flying. There were a thousand and one instinctive and mechanical motions he might make in a plane that would betray him to a smart instructor, and the instructor he had drawn was smart.

Bogart had not made the mistake of underestimating him. His name was Tibaux. He was in his late twenties, Bogart estimated, rather tall and loosely hung together, and deceptively slow in his actions and his speech. He doesn't miss much, though, Bogart thought. I'll have to watch my step.

His first flight proved to him that his estimate had been right. He had made two mistakes, neither of which was significant, and both of which Tibaux noticed. The first was after they had taken off and Tibaux, seated in front of him, turned the controls over to him. Bogart set his feet on the rudders and took the stick in his right hand loosely, almost delicately, feeling the even balance of the plane under him, turning his head from side to side in an alert watchfulness for other ships and checking the altitude of his plane by the wing tips. He had flown thus for perhaps two minutes before he caught Tibaux's

Bogart was already outside, choking and blinded, clawing frantically at Tibaux's safety belt and the snaps on his chute, and struggling with that inert and helpless figure

eye in the rear-vision mirror. Tibaux smiling, a knowing and suspicious look on his face.

Number one, Bogart thought. He clenched his hand convulsively on the controls. Promptly he heard Tibaux's voice coming back to him over the steady din of the motor: "Don't choke it. It won't let the plane fly itself. It can fly better than you can. Or maybe I should say it can fly better than a beginner."

Bogart did not answer him. The second mistake he had made was when they had taxied up from the runway into the hangar. Bogart cut the switch and had jammed the throttle full on to the convulsive preignition firing of the motor, and again he caught Tibaux in the mirror, smiling and suspicious.

That's the second one in forty minutes, Bogart thought. I'll have to do better. He unfastened his safety belt and crawled out through the door. Tibaux was waiting for him.

"No previous flying experience," Tibaux asked.

"No, sir," Bogart answered. "I have no instruction. I've been up quite a while. Later, while he was sitting at the controls (Continued on page 70)

NORTH AMERICAN SETS THE PACE

(One of a series reporting North American planes in action on the battlefronts of the world)

A FLIGHT OF NORTH AMERICAN B-25 MITCHELL BOMBERS HAMMERS THE AXIS IN NORTH AFRICA

## NORTH AMERICAN PLANES MAKE NEWS AROUND THE WORLD

### Mitchell and Mustang Take Part in Six of "Big 10" Stories

"**N**AMES MAKE NEWS" — and two great names in your newspaper are the North American B-25 Mitchell bomber and the North American P-51 Mustang fighter. In a recent press association list of 1942's ten biggest war stories, there were SIX in which these planes figured!

Here are the roles they played: (1) North American B-25's bomb Tokyo. (2) B-25's play a major part in smashing Rommel's Afrika Korps. (3) North American P-51 Mustangs harass enemy in sweeps over Europe. (4) B-25's aid great Russian winter offensive. (5) B-25's destroy Jap ships, airfields, munitions in New Guinea. (6) Mustangs provide strong aerial support over Dieppe.

North American planes are making even bigger news in 1943 because they are even better than last year. Here at North American we

refuse to "freeze" design. Whenever battle experience or production skill suggests an improvement, we change *right now*. Today's B-25, for instance, is more than 22,000 drawing changes better than the B-25's that bombed Japan eleven months ago!

This policy of constant improvement demands extra work and extra ingenuity from every North American employee. But it's worth it. It will win the war sooner — days, weeks or even months. It will save many American lives. It will give you plenty to cheer about as you read the news North American planes will make on every battlefront from now 'til victory.

**NORTH AMERICAN AVIATION, INC.**

ATED BY RONALD McLEOD

## Sory Thus Far:

VN together in the German army, during the first World War, Alois Pranner, a mad Oscar Lautensack, an unscrupulous and clairvoyant, form a team that soldier audiences—far behind the front.

ater—in 1931—the two men are living in. Oscar is desperately poor. Hans (or g), the clairvoyant's brother, a murderer has just been released from prison, Munich. Meeting him, Oscar is astounded by his obvious prosperity. The answer, is simple: He has become a Nazi; a party man," he need not worry about Oscar meets Adolf Hitler. The Fuehrer is strongly attracted to him. This delights Oscar and formulates an interesting plan.

is to go to Berlin and there win the confidence of a powerful woman, Baroness von Trettnow; he is to use either the two brothers' nests. He is to do one thing with—Adolf Hitler! He is to be the Fuehrer's leading adviser!

ndorses the idea. He tears up the contract book (which he has promised a friend) and goes to Berlin. He is accompanied by Pranner, a helpful confederate.

in, he makes progress quickly. Baroness Trettnow is tremendously impressed by his personality. When she begins to hint that he may help him financially, he knows that he is hooked. He pretends, however, that he does not interest him.

ted by Party funds (supplied by Hans), Oscar makes an elaborate wardrobe. He hires a secretary, Ali, an Arab. He hires a secretary, known as the editor of Germany's Star (a devoted to racial studies and occultism) and runs operations in earnest.

he astounds a small audience composed of prominent Nazis and their wives, by an exhibition of mind reading (good guessing, plus hypnosis and telepathy). Then, having registered the name of the people who really count, he goes to find a woman who can take his dictation. He finds just the person he wants in Käthe, a public stenographer. "I think," he says after testing her dictation in her office, "we are working together often." Then: "Do you know who I am?" The woman shakes her head. "All the better, all the better," Oscar says, with a touch of forced good humor.

### III

IN THE evening of that same day Dr. Paul Cramer sat in the little apartment which he shared with Käthe. He smoked his pipe, and waited for her. His thoughts went to and from the piece of writing at which he was presently working and Käthe who was waiting for the evening meal.

an article on which he was engaged was difficult. It dealt with the question of whether it was only external circumstances that made the Germans so receptive to Socialism, or whether the cause lay in their character. To maintain an attitude of detachment in such an article was a very ticklish business.

He sniffed the fragrance from the air. How much happier he felt since he had been living with Käthe. They had had to live their new existence together the hard way. Käthe's father, Severin, judge of a court, could not abide him, Paul, a half-Jew.

He knocked out his pipe. He would be careful not to spoil his relation with Käthe. As soon as they approached a difficult topic, he would simply control himself and severely hold his tongue. He had argued with her often enough about National Socialism. Her opinions were determined by her not very happy external circumstances. It was senseless to oppose her with reasonable arguments. One

had to wait until she changed of her own accord.

Now she was bringing the soup. Paul ladled it up with enjoyment.

Käthe was waiting to tell him about the peculiar stranger. Finally she found the right moment. He recognized at once from her description who the man was. The notorious Oscar Lautensack, no doubt about it.

"You've netted a beautiful specimen there for your collection of Nazi types," he said with an amused smile. "Your Reich, your coming millennium, has at least one blessing. It allows a fellow like that to run around at liberty and make it possible for you to earn eight marks. Five years ago they would have popped this Oscar Lautensack in jail for fraud. Today he's sacred and can do all the mischief he likes."

Mysteriously stirred, Käthe witnessed how Oscar's face suddenly became empty, how his jaw dropped, almost idiotically, how his strangely unseeing deep gaze penetrated her face

Käthe had been burning to tell Paul about the stranger. She was accustomed to talk her affairs over with him. They had grown up together and had always shared good news and bad, and there had been plenty of both. So she was all the more disappointed that he disposed of her encounter with Lautensack in such contemptuous words. It was a shame; as soon as politics came up, they no longer understood each other. Now his intolerance had also spoiled her joy in her new client. . . .

Three days later the stranger appeared at Käthe's office again. "I'm glad you came back, Herr Lautensack," she greeted him, her face beaming.

"So now you know who I am?" he said. Käthe nodded.

He settled himself as if he had been there any number of times and began to dictate a reworking of the material he had composed on the last occasion. But whereas Paul would work at just such revisions with obvious love, not tolerating one sentence which did not fit the thought exactly, this Oscar Lautensack was completely unsuccessful in finding the proper, smoothly fitting words. The longer he tortured himself, the vaguer his sentences became. With a rough gesture, in the middle of a sentence, he interrupted himself and dropped his attempt.

He paced up and down the little room and filled it with big words. He spoke about the second essay which he was going

to dictate, explained how his gift was a blessing, but also a heavy burden. Käthe felt that he was not really speaking to her, but to himself; obviously he needed another's presence to let his thoughts become words.

In two or three days, he declared, as he took his leave, he would dictate the article. Then, in the doorway, he asked whether she also worked outside of the office. In his own house, in a familiar surrounding, the work would come more easily to a man of his type.

A DEEP joy filled Käthe, and a slight fear. She felt attracted to this man who extended his invitation to her; but warningly, from a distance, the scornful sentences that Paul had spoken rang in her ears. As if he felt her doubts, Oscar Lautensack went on: "Look, Fräulein Severin, I have a regular secretary. But I don't wish to dictate to him the things that come from the depth of my being. I want to work on such things with a person in whom I find understanding."

"When shall I come?" she asked.

"Tomorrow," he would have liked to answer. But he controlled himself and told her to come three days hence.

During those three days he was even moodier than usual. Alois had carried out his resolution and had gone to Munich, there was no one around on whom Oscar (Continued on page 79)

in the office signing in on the daily sheet,  
he looked up suddenly. Tibaux was staring  
at him, a puzzled expression on his  
face.

"You aren't, by any chance, trying to  
kid somebody, are you?" Tibaux said.

Bogart stared back at him. "Why would  
I try to kid you?"

"Just an idea," Tibaux shrugged his  
shoulders. "That delicate touch you dis-  
played, like a violin player or a pick-  
pocket. What did you do before you  
decided to take up flying?"

Bogart grinned at him. "I was a floor-  
walker in a department store. Ladies un-  
dergarments." He signed the sheet and  
hung the pad on the wall.

OUTSIDE he paused for a moment, his  
hands in his pockets, whistling softly  
to himself. Behind him he could hear the  
intermittent roar of the motors as some  
plane moved off the apron toward the  
runway. Overhead, the sky was a clear,  
clean blue, without clouds or haze, and  
the sun was shining. Good weather for a  
while, Bogart thought.

The idea pleased him. He was uneasy  
and worried. The sooner he got through  
his primary training, the better. Second-  
ary would be easier. With a few hours  
behind him as an excuse for whatever  
maneuver he might do well, with bigger  
ships and with a new instructor, he  
wouldn't have to be so careful. Tibaux  
had him worried, though.

In a way, it was an interesting experi-  
ment, he considered, or a game, if you  
wanted to call it that. To a certain ex-  
tent, it was a test of his skill and ability,  
and to that extent, he enjoyed it. It was  
difficult, though, not to relax at the wrong  
moments.

He had discovered that it was more dif-  
ficult to deny himself a knowledge of flying  
than it had been to gain that knowledge  
originally.

Looking back over a number of years,  
he tried to remember the mistakes he had  
made when he was learning to fly and he  
worked as hard now to cultivate them as  
he had worked in the beginning to iron  
them out. Those mistakes he supple-  
mented by watching the rest of the group  
on take-offs and landings, and imitating  
their errors. The job he turned in was a  
masterpiece of its kind.

One fault he found that was fairly com-  
mon was the difficulty in steering with the  
rudders on the take-off, and for four days  
following that happy observation, he went  
down the runway, always partially out of  
control, stalling the plane off the ground  
in weird attitudes that had Tibaux alternat-  
ing swearing and praying in the front  
seat.

Once in the air, his performance was  
almost as bad. He climbed too steeply or  
not at all, and had difficulty in co-ordinat-  
ing the throttle with the stick. His slipped  
or skidded his turns, let his altitude vary,  
and consistently flew with one wing low.  
His landings were awful. At the end of his  
eighth flight, he had even aroused Tibaux's  
admiration.

That afternoon, Tibaux had waited for  
him, failing in step with him and walking  
with him across the apron toward the  
hangar.

"I believe you told me," Tibaux said,  
"that you've never flown before."

"No, sir."

Tibaux shook his head. "You fly so  
awful, I'd swear nobody could fly that  
bad, unless they knew how to fly, and fly  
well, and sat up there and tried to do  
everything they could think of, the way it  
couldn't be done."

"I guess it just comes natural to me,"  
Bogart said.

Tibaux spat in disgust. "Ever  
fly with you I go downtown and  
another thousand dollars' worth  
insurance. A man doesn't realize  
wards of his trade until he gets  
like you in the back seat of  
Brother, I have learned more this  
past week, more things"—his voice  
until he was almost yelling—"one  
of them wrong!"

He walked away, still shaking  
in an exaggerated gesture of desig-  
n. Bogart allowed himself to im-  
pale that, not rapidly, but enough so t  
end of four weeks, he was flying  
he judged to be average skill, ev  
ing himself the luxury of doing o  
things well.

He did not dare relax, though  
days passed, there had grown up  
the two of them a feeling that  
precisely enmity and was not  
anything else; and Tibaux made  
esting for him. He tried consta  
dozen different ways to trick  
making some betraying mover  
though on only one occasion  
attempt been obvious.

That one occasion had been  
time they had gone up to do sp  
gart was climbing the plane in l  
tle turns, and Tibaux turned at  
the front seat.

"I want you to do precision sp  
baux said. "Two turns. Pick a  
point on the ground when you sta  
the turns, and when you pull ou  
you to come out heading in the  
rection you were going when you  
the spin. I'll show you how to  
You got it?"

"I've got it," Bogart said. The  
showed three thousand feet and h  
off.

"I'll take it," Tibaux said. "Fo  
through." He chopped the throttl  
the nose up into a stall and kic  
right rudder.

BOGART sat in his seat, lea  
ward slightly, appearing inten  
terested. He felt the full loss of c  
the stick as the ship stalled; the ruc  
depressed under his right foot ad  
watched the nose of the plane s  
the long, slow arc of a half turn  
it wound up in the spin. He hac  
a road as his reference point  
watched it revolve now like a h  
the face of a gigantic clock, coun  
turns in his mind, One half . . .  
one and one half . . . two . . .

And then he stopped counting  
there in a kind of cold horror,  
himself to keep his hands and fee  
controls—because Tibaux did no  
out. He sat there and let it wrap  
into a fine six-turn spin, before h  
kicked the opposite rudder, ban  
stick forward and back, and pulle  
at twelve hundred feet, and at an ir  
air speed that was at least sixty r  
hour over the plane's red line.

Bogart's face had turned the c  
wet putty, and he let his breath c  
long, relieved sigh.

The son of a gun, he thought  
ingly. Tibaux would pull the wi  
this crate just to force me to  
move. Well, nuts to him! If he ca  
it, I can!

He cleared his throat to make  
voice would work and he leaned  
in the seat, arranging his face in a  
cent and rapt expression.

"Say, that's fun, isn't it?" Boga  
"Let's go back up and do it again"

Tibaux only glared at him in the  
The thing that defeated Bogart  
was a circumstance which neither

ould have foreseen, and which neither could have allowed to happen if he could have foreseen it. On that day, they were practicing pylon eights, a low-flying precision maneuver. Bogart had gone down approximately three hundred feet, experimenting to determine the pivotal altitude of the plane, that exact altitude at which the plane were held in a constant position, the wing tip would remain in a fixed position in relation to the point on the ground around which it was turning. He selected his pylons, made his pass around them, and laid the wing over on the ground when it happened.

He was aware of it first as a puff of black smoke that erupted suddenly from beneath the engine cowling. He watched it grow, almost without thinking for an instant, until his mind had accepted it as a fact, and he saw the thin orange sheet of flames edging through the smoke and the convulsed sputtering of the engine.

TIBAU grabbed the controls. Bogart's face smacked crawled with fear, but even as he did not forget himself, restraining his impulse to retain command of the ship, he gave his hand to relax on the stick and his feet from the rudders.

"So it!" Bogart yelled. "Slip it!"

Then he sat for an instant of horrified shock as he realized what Tibaux was doing. It was clear to him immediately. It seemed to him that in that instant his mind was separate from himself, completely apart, undisturbed by fear or anger, thinking coldly and precisely. He's got guts, Bogart thought. He's got me my chance. But it's suicide. He knew that. He knew it without thinking, his mind running on ahead to what would happen and making precise judgments.

In suicide, Bogart thought again, and he could feel the outrage of it some place inside him.

Tibaux had righted the ship. He had the throttle and he was holding the ship steady now, and on an even keel, his face contorted in the mirror, yelling over his shoulder: "Hit the silk! It

won't stay here forever! Go on and jump!"

Bogart's mind was still distant and still clear. All right, he thought. Go on and jump, and let him kill himself.

But he could not do it. He could not and would not do it. It wasn't that he was afraid to jump. He had done that too often. It was simply that he would not leave Tibaux there alone, realizing that, at that altitude, there was not time enough for both of them to jump. He realized also that if Tibaux held the ship as he was holding it now, partially stalled, while Bogart fought the door open against the wind and cleared his awkward and hampering chute from the controls and from whatever else might interfere, Tibaux would never regain control of the ship—or if he did, the fire would be in the wing fabric, and either way he was gone.

"Damn you!" Bogart yelled. "Oh, damn you!"

There was no choice left to him. He could take the slim chance that Tibaux had preferred not to take with both of them in the ship. There was no time to argue. A man did the best he could with what he had.

Bogart leaned forward in the seat against the pull of the safety belt. He unhooked the fire extinguisher from its bracket in back of the front seat, swung it in a short angry arc and watched Tibaux sprawl in his seat like a badly stuffed sawdust doll. Still thinking over and above the realization of his own danger with that detached and cold calculation. Damn him! He beat me, Bogart felt suddenly furious at that limp figure, as though the circumstances that had forced him to betray himself were of Tibaux's own contriving.

And yet in spite of that, in spite of knowing that the thing he had worked for was definitely gone, Bogart was conscious of a certain relief in at last being what he was, in being able to pit his skill against the plane and the fire.

Even as Tibaux crumpled in the front seat, Bogart made his move. The ship was settling into the stall. He pushed the nose down to regain control and laid it violently over on its side into a long, sickening slip

**Toast to the future!** Here's to America . . . where the only dictating is done with voting machines . . . where Liberty rings from every schoolhouse and every tall, white steeple . . . where a backwoods rail-splitter can get to be President and opportunity knocks seven days a week. Here's to a future where we'll have all these and more—a future worth fighting for—in the home as well as at the front. As a favorite guest and old friend in the American home, Canada Dry says let's keep that future bright—with all the War Bonds and Stamps we can buy.

RECEIVER

T-30 RCBB transmitter-receiver is an extremely efficient and dependable 2-way aircraft communication system. It's the "pilot's preference" because every flying need has been foreseen and every installation problem solved in advance — everything is at the pilot's finger tips.

- ★ Powerful 2-frequency crystal controlled transmitter (2900 KC to 6500 KC).
- ★ Telephone and telegraph emission approx. 20 watts output.
- ★ Three Band receiver — radio ranges (180 KC to 405 KC) broadcast (500 KC to 1200 KC) airway communications (2800 to 6700 KC).

For "three-way radio", the receiver includes new provision for operating from both the conventional antennae and the famous lightweight Learadio loop (shown below) providing static-free reception or zero-null direction finding. (Approved type for C.P.T. training.)

Automatic electrical and mechanical controls of Lear-origin are incorporated in aircraft manufactured by: Consolidated, Vultee, North American, Douglas, Boeing, Lockheed, Beech, Curtiss-Wright, Grumman, Northrop, and subcontractors: Ford, General Motors, Bellanca, Eastern, Nash-Kelvinator.

## Point Rationing

...it's patriotic, and common sense, too

"YOU'LL have to get along with fewer pencils this year", says Uncle Sam. Conservation is the order of the day. Colored leads that crumble and break, waste time and materials. Today, more than ever before, Quality is the best buy . . . and the most economical in the long run.

MONGOL Colored Pencils immediately suggest themselves. Their thin, strong leads permit handling just like a black lead pencil—in a pencil sharpener or in use. For years, they have been most widely used for office, engineering and art work, for checking and color-coding, for maps, graphs and a hundred and one purposes. Used also for wash effects with brush and water.

AND HERE'S A POINT: Mongol Colors are clear, strong and easy to work with under artificial light. Ask any night-time worker.

Today, when your work calls for color, be sure to "Say MONGOL to Your Stationer". Available in 24 different colors—with 3 degrees of hardness in red and blue, and 2 degrees in green and yellow. Single pencils 10¢ everywhere, less when bought in quantities or assortment boxes of 12 or 24 colors.

## Food to Fly On

Continued from page 13

All these men had to be housed and clothed; they had to have planes to train in, and airfields to train on; but they also had to be kept well and well fed. So along with all the other branches of the Air Force, the Medical Branch was reorganized, and Mr. Power, bearing in mind that connection between food and efficiency, saw that it was organized to include a number of doctors who in civilian life were experts in nutrition.

They had their hands full almost before they started. Complaints were already sifting in from various air stations. The men, in spite of the new standard ration which had been adopted, were complaining in classic fashion about their food. It was too heavy, they said. It made them feel logy and uncomfortable. They didn't like it.

Under any normal circumstances the men might have been told, "You're in the army now. Eat your food and like it—or else!" But they weren't in the army; they were in the Air Force, and there were those nutrition-minded medical officers. They thought maybe they'd go around to a few air stations and take a look at this carefully balanced ration the men were griping about.

### Proof of the Pudding

When they saw it, it didn't look very different from the old army ration. In quite a few of the air stations, the cabbage was gray, the meat was gray, the potatoes were gray. In some, the spinach and peas and tomatoes were brown. When they talked to the cooks, the cooks said, "We've always cooked it this way," or they said, "We have to cook it ahead or it won't be ready when the men come in and they'll be sore." Sometimes they just stood there and looked bored. A man doesn't join the Air Force to be a cook. If he has to do kitchen work he'll do it but he won't like it.

The medical officers looked at the cook and they looked at the food and they looked at one another. Then they got some little bottles and some preservative, and they took samples of the food the men were getting (samples of it raw and samples of it cooked) and sent them to a laboratory.

"Test these samples," they said, "for calories, minerals and vitamins."

They knew what they were going to find. They knew the simple little kitchen rule that if food looks good and tastes good, it is apt to be good for you, and if it looks awful and tastes awful, it probably is awful for you. They knew what all of us ought to: That if cabbage, for instance, is cooked ten or fifteen minutes in the proper amount of water, it not only will stay pretty and green but will keep about four fifths of its raw vitamin C content; but if it is cooked three times as long, it will only keep one third.

They knew that potatoes mashed and left on a warming table an hour lost practically all the vitamin C they had when raw or when baked whole. They knew that milk allowed to stand around in bright sunlight loses all its vitamin B<sub>2</sub>, and that milk is the chief source of this vitamin. They knew, but they wanted proof and they got it.

When the tests came back, the calories were high enough, probably too high for airmen who spend more time in technical study than on long marches. The minerals were all right, too, but the vitamins just weren't there. They had been there on paper when the committee on nutrition had planned the standard ration, but they weren't there by the time the food was served to the men. Half of them had gone

down the sink, and most of the other had burned up waiting around on tables. In actual cold figures it turned out that as much as 85 per cent of the vitamins that were supposed to be in the food had been destroyed by the time it was served to the men.

Now you hear a lot of talk about vitamins, and some of it is too technical, some of it is too extravagant, and you get pretty tired of it. But the fact remains that, to be really well, a person has to get certain well-balanced amounts of vitamins there are, and he has to get them regularly. The Red Cross both in the U.S. and in Canada doesn't spend hundreds of thousands of dollars sending millions of vitamin capsules to devastated countries just as a gesture; and it's perfectly correct that, to be a really efficient soldier, a man can't feel just sixty or seventy-five per cent well. He has to feel a hundred per cent well.

Probably the food was too heavy, probably a few less calories and a few more vegetables and fruits would be better for the Air Force. The medical officers thought that away for change when they came around to it. But what was more important, probably a lot of the airmen felt the food was heavy because they were vitamin deficient. What if most of them had gained eight or ten pounds since they came to service, they still might not be getting enough to eat to keep them fit.

The medical officers did certain vitamin tests on selected groups of the airmen just to be sure they were right; and they were right. Then they turned their fire over to the members of the Air Council.

Now the RCAF is somewhat proud of the fine co-ordination and co-operation of all its divisions, and with reason. When the Air Council looked at the RCAF there was no making excuses or passing the buck from one department to another. Something had to be done. The only question was what, and that didn't take long to decide.

If the trouble was in the kitchen, who were the kitchen experts? Women, of course. To this time, the problems of the kitchen and mess halls had simply been dealt with by one of the officers at each air station. He always had his other regular work to do and he probably didn't know much about food anyway. Everybody wanted the men to be well fed but nobody wanted to be messing officer, nobody really had time to give to the job.

### The Lady is Willing

But the RCAF already had a Women's Division like our Waacs and WAVs who were driving cars and doing housekeeping. How about getting some women into the Women's Division to do real kitchen work? How about women mess officers? It was revolutionary, it was unheard of, but nobody could figure out quite what it should not be, so they went ahead.

They looked over the field and picked out a dietitian who was running the mess hall in one of the biggest department stores in Canada. They offered her the position of chief dietitian with the mission of flight officer. The command generously loaned her to the RCAF for the duration. They took her through several of the airmen's messes.

When she had seen everything, she said, "The quartermaster will supply proper food, we'll supply the proper organization, if you will work out an organization that will get the food to the men properly cooked for their health and enjoyment. Will you do it?"

That was in February, 1942. By March

we seven more dietitians heading  
in commands into which the RCAF  
side, and the RCAF cooking school  
which more in a minute. The RCAF  
had eight new-type messing officers,  
and the biggest hotels, hospitals and  
organizations in Canada for the

where are seventy more in charge  
of the RCAF kitchens in Canada, and the  
on the lookout for some twenty  
others. There are women cooks  
of the RCAF kitchens and  
kitchen helpers. Each kitchen still  
but a third men workers for the  
work such as lifting, butchering  
baking. Each kitchen still keeps  
a cook to see that the orders are  
out, but the dietitian gives the or-  
der. The dietitian plans the menus from the  
ration, supervises the prepara-  
tion of food, and tastes, and  
every single dish before it is  
served to the men.

#### Food to Keep Men Fit

of course, all been as simple  
as possible. Women taking over desk  
kitchen jobs so a man can get  
on, women driving cars and be-  
lieving was one thing. As long as  
it was a convenience, let them wear  
blue if it made them happy.  
When officers in the kitchen, talk-  
ing waste and spoilage and cooking  
temperatures, women telling ex-  
sergeant-cooks what to do, that  
was a disgrace and an outrage. But they  
were told and they were told.

Medical officers were given a brief  
course in nutrition and the nu-  
merous of the RCAF, and the medi-  
cal officers at each post were reminded  
that their first job was to keep the men  
fit. This part of this job was backing up  
the medical officers in her projects.

There have been other subtle changes  
in the airmen's messes besides the  
appearance of good food freshly  
prepared and served. Many of the mess  
halls are acquiring coats of paint and pic-  
ture walls that once were plain bare  
walls. A few have partitions built up, so  
that a man has finished his meal and  
is sitting in, he doesn't have to  
eat dirty dishes and garbage but can  
eat his plates in through a small  
window and go on about his work.

Many of the mess halls are acquiring  
place mats. The women's touch,  
Do the men feel scornful of it  
or do they do not. The medical officers  
concerned about the health of the  
men so may the Minister for Air, but  
the messing officers are basically in-  
terested in that the men should enjoy  
their meals, and that is what the men are  
interested in, too.

Of the little ironies of this whole  
revolution is that the setup has  
provision for the officers' mess,  
which has always been separate so that the  
officers could have the little luxuries they  
deserve and the better cooking they  
deserve. But now, many of the officers  
are complaining that the men get better  
than they, and are coercing the poor  
officer into supervising their kitchen  
work spare time and planning their  
meals along with those of the men. And  
the dietitians, as officers, have to eat  
in the officers' mess provides, they are  
not hard to coerce.

There is a radical change like this, in  
the RCAF as big as the RCAF has now  
taken more complicated organiza-  
tion just the installation of women  
messing officers. There had to be test  
kitchens, test kitchens and training  
kitchens, and there are. The Ontario Agri-  
cultural College at Guelph, which is some  
miles outside Toronto, has helped the  
RCAF to set up a cooking school where

women enlisting in the RCAF as cooks  
are sent for an eight weeks' course in  
RCAF cooking—five weeks in general  
principles and three weeks in the actual  
conditions of an air station kitchen com-  
plete with coal stoves and large-scale  
preparations.

There is a test kitchen here, too, where  
new recipes are being constantly tried out  
and improved and standardized before  
being sent out to all the air stations. Both  
the cooking school and the test kitchen use  
for their trial flights an Air Force Wire-  
less School which is also at Guelph. But  
the men do no complaining. With the  
school and test kitchen in the hands of  
women messing officers who know their  
business, the Air Force Wireless School  
probably eats better than any other air-  
men's mess in Canada.

Also at Guelph is one of the four nutri-  
tion laboratories that are being set up in  
four different universities, to keep a con-  
tinual check on the food in the various air  
stations. Samples of food, both raw and  
as it is actually served, are sent to these  
laboratories from each air station at inter-  
vals, and a report is sent back on the vita-  
min content. Then the dietitian can do  
more than say, "This cabbage doesn't taste  
right." She can say, "I have a report here  
that proves you might as well be serving  
boiled newspaper," and she probably will.

The reason for establishing the labora-  
tories in universities is parenthetical but  
interesting. The Minister for Air is look-  
ing ahead of the war and hoping that these  
laboratories, when peace comes again,  
won't simply be abandoned, but will be  
taken over by the universities as part of a  
nation-wide program for better nutrition.  
And the universities hope so, too.

In fact, the only people not entirely  
happy now are the Minister for Air and  
the nutrition-minded medical officers.  
They expect to be happy soon but there  
is still one little problem. You order  
proper rations, you see that they are prop-  
erly prepared and served, but they still  
don't do the men any good unless they  
are eaten. And the men in this British  
Commonwealth Air Training Plan, which  
the RCAF is running, come from all over  
the British Empire, from places with all  
sorts of different eating habits.

#### Forced Feeding—Painless Style

Many of them weren't used to getting  
fruit juices and milk and fresh vegetables.  
Some of them didn't like milk. Most of  
them didn't like raw salads. But maybe  
if they knew just what fruit juices and  
fresh vegetables and salads and milk actu-  
ally did to their bodies, if they knew how  
the absence of these substances affected  
their efficiency as men and as fighting  
machines, they'd learn to like them.

So the RCAF has put it all into a  
movie: What foods an airman needs for  
absolute top health and how these foods  
produce top health and why, all in color.  
They're showing this movie now at the  
various Canadian air stations and they're  
following it up with a booklet. This book-  
let, also in color, tells the same story and  
is going to every man in the RCAF—a  
compulsory ration. The booklet, just as  
an interesting example of wartime co-op-  
eration, is being paid for by the life insur-  
ance companies of Canada, which plan to  
distribute it throughout the civilian popu-  
lation as well—one step toward a health-  
ier and happier Canada.

If with this intelligent propaganda, plus  
the perfected RCAF ration which went  
into effect last June, plus the highly  
trained women messing officers, plus the  
nutrition laboratories, the RCAF boys  
don't continue to be the best-fed service in  
the British Empire, it will only be because  
some other service has taken a good look  
and started a bigger and better revolution  
in its own messing department.

THE END

# The Life of McKinley

By Arthur "Bugs" Baer

ILLUSTRATED BY EARL BLOSSOM

The old lady was Mrs. Welliver. In a few minutes she came running down off her porch in a red quilt thrown over her nightgown and started off in the footprints

THE screwiest story I ever worked on was in a little Vermont town that only had streets in the summertime.

The rest of the year the snow was up to your pockets.

It takes a lot to make a Vermonter open a window and a bureau drawer will do just as well. But one frostbitten night in January a series of interlocking screams went rapidly down the center of the town. When the intrepid old ladies looked out their windows they saw footprints making themselves. Invisible hands were punching wet stencils in the snow to the musical backdrop of a long, pulsating shriek.

While one old lady looked to see what was parading down the street in back of the agonized calliope, the footprints hit a sharp curved right across the place where her sidewalk would blossom and ran up her porch.

The old lady called, "Who's there?" and the footprints answered, "Welliver's dead."

The old lady added a rich, toothless contralto to the choir.

The old lady was Mrs. Welliver. In a few minutes she came running down off her porch in a warm, red quilt thrown over her nightgown and started off in the footprints that made them but in the opposite direction. Other townies chased after the quilt. The quilt went two blocks and then turned into a two-story building with the upper floor lighted behind black blinds.

In five minutes everybody in town was trying to get up the street where Mrs. Welliver had gone. They made way for the doctor, the village coroner and the mayor, who were all one distinguished citizen. He came down pretty soon and then ran up again. He slushing around said, "Welliver's been murdered."

Welliver was a pretty important man in town, next to the mayor. The brass sign on the building alongside the door that the stairs said he was a lawyer, notary, trustee, estate manager, real-estate agent, life-insurance agent and other things. He was what you might call an all-round handy man, with a diploma to prove it. By and by, the doctor came down like he meant it this time and said, "No murder. Just a stroke."

Whatever it was, Welliver was dead. Mrs. Welliver was down the steps in her red quilt, and all her neighbors went with her and into her parlor.

Welliver's office was only a quarter mile from his house. He slept in his office five nights a week.

He said he was busy and had to work nights. He had broken his ankle nine years or so ago and it never healed right. He said he tried to keep off it as much as he could, especially in the pery weather. He did his own cooking on a little gas burner. The grocer said Welliver had quite an appetite for a thin old man. In fact, he said Welliver ate enough for two.

THE neighbors in Mrs. Welliver's parlor sympathized with her, and she finally stopped heaving and gasping. Suddenly she looked around at everybody and said, "Where is she?"

Well, there were a lot of her's around in the parlor, and Pringlette said, "Do you mean me?" and the schoolteacher said, "Do you mean me?"

But Mrs. Welliver said, "No, the woman who told me he was dead."

The ladies were looking at one another, when something came into the parlor out of the dark dining room and said, "It was a woman."

You had to look twice to see it was a human being and three times to tell it was a woman. She had on a white nightgown, her feet were bare, her hair was straggly white, her eyes looked cold tapioca, and her face was whiter than a plasterer's hat.

Her lips were blue-gray. She was so faded you couldn't see her against an ironing board.

You would look that way too if you had lived in a six-foot office storeroom for nine years. That's why she looked that way and that's why Welliver's ankle never healed.

There was an inquest the next day, and all that came out of the coroner impaneled a jury of twelve good men and true. The man was Spinner Beevan, who was a widower. Those men on the jury sure looked at one another when she said she had lived in Welliver's office storeroom for nine years, and the town not expecting anything more wrong than a boy writing to Santa Claus.

She had come to town when she was about twenty-two, she made her thirty-one. She was a book agent. One day she walked up the stairs to Welliver's office and never came down again.

The title of the book she was selling was The Life of McKinley.

Welliver was dead, and there was nothing to be done about it but turn her loose. He just had a stroke and went out as near the State House lawn. Spinner Beevan announced the jury's verdict, and she was free. He said he would drive her to the railroad depot, but first she wanted to stop at a drugstore, the beauty parlor and Welliver's office. That took all of two hours, and when she came down the steps, she looked pretty good. She had rubbed her lips and her cheeks. Her clothes didn't look out of style in Vermont town after a mere nine years. Spinner took her back and helped her into his sleigh.

On the way to the depot, she opened her bag and took out her books. She asked, "Could I interest you in The Life of McKinley in two volumes?"

Spinner looked at her and clicked to his horse. Down at the more Crossing where you bear left to get to the station, Spinner bore to the right.

A SHORT STORY  
COMPLETE ON THIS PAGE

Earl Blossom

## MORALE IS A LOT OF LITTLE THINGS

LIKE THE FIRST BRAVE CROCUS, for instance, that pops out of the grass on a raw spring day...

That's one of the little things almost guaranteed to cheer you up... to boost the old morale.

The first crocus... that letter the censor thought was just like a million others... a lift to work in a neighbor's car...

Little things, sure. But little things that mean a lot, somehow.

They keep us smiling... help us to take the bad news with the good... they build morale.

☆ ☆ ☆

It happens that millions of Americans attach a special value to their right to enjoy a refreshing glass

of beer... in the company of good friends... with wholesome American food... as a beverage of moderation after a good day's work.

A small thing, surely—not of crucial importance to any of us. And yet—morale is a lot of little things like this. Little things that help to lift the spirits, keep up the courage. Little things that are part and parcel of our own American way of life.

And, after all, aren't they among the things we fight for?

*A cool, refreshing glass of beer—a moment of relaxation... in trying times like these they too help to keep morale up*

**I**T is not pleasant to have your peaceful life upset by wartime needs and restrictions and activities. . . . It is not pleasant to die, either. . . . Between you who live at home and the men who die at the front there is a direct connection. . . . By your actions, definitely, a certain number of these men will die or they will come through alive. If you do everything you can to hasten victory and do every bit of it as fast as you can . . . then, sure as fate you will save the lives of some men who will otherwise die because you let the war last too long. . . . Think it over. Till the war is won you cannot, in fairness to them, complain or waste or shirk. Instead, you will apply every last ounce of your effort to getting this thing done. . . . In the name of God and your fellow man, that is your job.

The civilian war organization needs your help. The Government has formed Citizens Service Corps as part of local Defense Councils. If such a group is at work in your community, cooperate with it to the limit of your ability. If none exists, help to organize one. A free booklet telling you what to do and how to do it will be sent to you at no charge if you will write to this magazine. This is your war. Help win it. Choose what you will do — now!

**EVERY CIVILIAN A FIGHTER**

But he paid it. He bought the high monthly installment rate.

"It's a pity," he complained, "that you shut yourself off from me. It happens so rarely that one finds a person who radiates inspiration, vitality. My task is not easy. The world of today simply won't admit that there is something beyond crass materialism. A man who believes it his mission to establish a faith in the spiritual, in ideas not directly perceptible through the senses, cannot shrink from coarse means; he has to advertise every success crudely."

Her reason fought against his phrases. But slowly there crept over her again that sweet, paralyzing, intoxicating sensation which she had felt the first time she had been together with him. She had done him an injustice; she had let Paul stir her up against him. The ostentatious ring on his finger, the tasteless luxury around him, were not his true self; they were the external means which he had to employ against his will. She should have recognized that of her own accord.

He sensed that he had struck the right note, that the old bond was re-established. And that drove him on, gave him a higher inspiration. Suddenly, blissfully, he felt that faint inner sound, as if thin silk were being torn; he "saw." Mysteriously stirred, profoundly drawn to him, Käthe witnessed how Oscar Lautensack's face suddenly became empty, how his jaw dropped involuntarily, almost idiotically, how his strangely unseeing and immeasurably deep gaze penetrated her physical self, through skin and flesh and bone. Yes, against her will and at the same time joyfully, with sensuous pleasure, she had to surrender to him what lay hidden behind her forehead.

In a drawling voice, pausing frequently, he told her: "And now I also see what stirred you up against me." And sure enough, he described Paul, described him spitefully, with malice, but unmistakably: the unbeliever, the enemy, who had no feeling for true "perception," for all that mattered.

She listened to him and paled. Now he was expressing, was putting into words, the very element in Paul which had alienated her. What she had left of critical sense told her that perhaps this man had informed himself about her half brother. But her doubts evaporated before they had really become thoughts. Her face showed plainly her amazement, her shrinking from the uncanny, her admiration. "Am I right? Am I right?" he asked her insistently, and, "You must free yourself of this person," he demanded fiercely. "You must not live in the same atmosphere with him any longer."

DR. FRITZ KADEREIT, having taken a shower, lay on his couch in his bathrobe, steaming luxuriously. He could still allow himself a few minutes; there was plenty of time before he had to change for dinner. The Kadereits were expecting guests: Herr Hitler and other prominent members of the Party.

Kadereit had indeed come to a kind of agreement with the Nazis. He had decided to back the Party, he was supporting them financially, and he was going to convert a large number of his factories to munitions. That was daring; for if the Party did not soon get control, if a rearmament did not soon take place, then such a conversion meant heavy losses. So this evening he was going to see the lords of the Party at his house. They were no real "lords." They weren't really "proletarians" either, as Ilse sometimes called them. They were simply a bunch of fortune hunters, have-nots, mercenaries, whom he and other industrialists hired to play off against the increasingly presumptuous workers and peasants. It was a risk too, to keep such a private army; for once one had got control

of the workers, how was one to get rid of the bandits?

Many of his friends washed their hands after they had had anything to do with the bigwigs of the Party. He, Fritz Kadereit, had a certain fondness for this Hitler, the great circus performer, the ridiculous and imposing clown. And he had a liking for Oscar Lautensack too. That mixture of an uncomfortable, rather uncanny gift with much theatricalism and even more shameless fraud was interesting. The Nazis had had the right idea when they had secured the services of that fellow for themselves; without doubt they could make good use of him. Even on Ilse, hard-boiled as she was, he had made an impression, a little too much of one.

He went over to Ilse's room. She was already dressed, wearing a blue-black gown. "You look marvelous," he said, "and very animated. You seem to be looking forward to our barbarians."

"I'm expecting to have a lot of fun," replied Ilse. "It's something different for once. Do you think I can invite our prophet to perform after dinner?"

He scrutinized her with his clever, veiled eyes. "This Lautensack fellow seems to occupy you a lot."

"He impressed you too," she said, "admit it."

"Well, yes," Fritz Kadereit answered with an amused expression. "He has his points."

They went into the reception room; the first guests had arrived. Hitler had sent word that he could not come till later; he had asked them to sit down without him.

Oscar Lautensack, however, came early and was in good form. The prospect of seeing the Fuehrer again and in such a small circle stimulated him. And it was a satisfaction to him that he had himself to thank, not Hannsjörg. He had prepared himself for the meeting, had asked Hannsjörg, and even that disagreeable Petermann, to instruct him about the details of the political situation.

AT FIRST, to be sure, things did not turn out so well as he had expected. True, he found Ilse Kadereit even prettier today than last time; she attracted everybody, especially Count Zinsdorff, and that excited him even more; yet for him she had only an occasional, absent-minded smile, and at table he sat far away from her.

Even when the Fuehrer finally arrived, the evening did not become any more exciting. Hitler turned out to be tired, preoccupied, unsettled. The elections for the Reich presidency were coming up; in the next days his candidacy was to be announced; he had important decisions to make.

For a long time he maintained a significant silence. Then, suddenly, he began a speech of some length. He held forth on the subject of elections and parliamentarianism, gathered impetus as he spoke, orated to the small circle as to a public meeting. But it was not a public meeting, and Hitler's rhetoric, in spite of the good will of all present, estranged rather than electrified them. He felt this, and just as suddenly as he had begun to speak he relapsed into his brooding.

Oscar had been obliged to wait a long time to meet the Fuehrer, and now that he had managed it at last, Hitler seemed unapproachable. Yet Oscar was not to be frightened off. He rallied his powers, inwardly begged and implored his revered leader, and behold—the Fuehrer looked up and gave Oscar a look of invitation.

Oscar arose and walked over to him. In his mind he quickly reviewed once more what he had heard from Hannsjörg and Petermann: namely that Hitler, foreseeing a certain defeat, had agreed to run against old Hindenburg with reluctance, and only because the prestige of the Party demanded it.

The Fuehrer, indeed, began at once to

complain. "We don't have an ear," dear Lautensack," he said. "The Party is a thorny one." The fallen silent. With reverence to the conversation between them and the clairvoyant.

Oscar weighed his words; steadily: "It must cost a man like is so imbued with the creed of the great self-denial to compete with field marshal, who after all has military virtues."

"There now, you've put my intelligence into striking words, my dear Lautensack," answered the Fuehrer.

OSCAR took pains to reassure respectfully. "The president, man, and you, my Fuehrer, are years of age. There is no doubt win in the long run."

"Yes," said Hitler, visibly and the last analysis my confidence great and well founded. It wavered." They looked into each other's eyes; they felt a common bond among the members of high society of the city clerk and the customs inspector. They had grade. They had not only forced mission into the upper crust, but had to stand around them full of listen with strained attention to each other as they spoke.

"You have grasped it rightly," and the Fuehrer began again after "To be forced by circumstances the aged field marshal wrings his vitals."

"That inner agony," Oscar continued, "is to be found from the beginnings of our history among all Germans. Even as schoolboys with emotion that beautiful old poem about Hildebrand and H. Father and son must fight each other, same blood runs in their veins, heroic philosophy lives in both must fight each other, with blood even unto death. One can't see why; it makes no real sense; but it commands it."

"Yes, yes," brooded the Fuehrer, the Valkyries' Ride rang in his just that fate demands it. Here reason has to hold her tongue; see the deeper causes," he went inspired, portentous tone, "but our very blood, my dear Lautensack, is to be found from the beginnings of our history among all Germans. Even as schoolboys with emotion that beautiful old poem about Hildebrand and H. Father and son must fight each other, same blood runs in their veins, heroic philosophy lives in both must fight each other, with blood even unto death. One can't see why; it makes no real sense; but it commands it."

And Hitler agreed: "Now you have an expression for my conflict, with touch, one might say."

The conversation with the secretary had aroused the Fuehrer. During twenty minutes more that he was to stay he spoke cheerfully now to another; he even laughed several times that sonorous laugh he had learned from the actor Karl Bischoff. As he left, he said to Dr. Kadereit: "Nice evening. I thank you, Herr Kadereit."

"I'm delighted that you enjoyed it at my house, Herr Hitler," Kadereit replied.

"Siegheil," said the Fuehrer.

"Heil, Herr Hitler," returned Kadereit.

The others were highly appreciative of the fact that Oscar had known how to cheer up the Fuehrer. Frau Kadereit, however, was as obstinate as ever in regarding Oscar as a clown. "You see, in mocking admiration, 'now you succeed in amusing even the Fuehrer,' Oscar remained indifferent. Most brazenly, he looked into the Fuehrer's face; he looked the graceful little up and down. He was sure of himself and of her.

Paul Cramer was at work. He

Käthe in his pleasant, deep voice. He picked up and down, molding his sentence as he worked on an essay about the emergence of a new age of magic. A logical application of one's reasoning power demanded exertion and courage. Man's business preferred to take refuge in the notion of a miracle worker, who in the worst of need would be sure to appear rather than to summon the strength of his own reason. This was why the world of today was so powerfully attracted to everything shadowy and obscure. This was why the Hitlers and their followers found such an easy task in winning the

She wrote unwillingly. She had a feeling that the bright, keen mind. But what was all this theorizing? Never had he written anything practical.

Interesting what a face you're making, Paul unexpectedly. "Does what give you a stomach-ache?" She knew that her reactions were so clearly in her face. She gazed at her, surprised yet not conscience-stricken. He stopped his work. "We go out? To the movies or to a party?"

He had an appointment with Oscar Laufer, she said; she blushed faintly; her face was defiant.

His gaunt, expressive face showed an air of despair. He had had to look on with a plunged head over heels into her enthusiasm for this clown; he had tried to free her of that madness. But all his arguments had failed before her; criticism and irony had only driven her deeper into the infatuation. "Then I will go to the Sociological Institute," Paul said with a somewhat forced smile and left the room to change.

Alone, she told herself that she was not Paul; she did not sufficiently appreciate his solicitude in her behalf.

He made no effort at all to penetrate her confusion. His psychological analyses were nonsense. But without any analysis, with a sleepwalker's assurance, he did the very thing that was her state of mind.

He could feel when Käthe belonged to him. But that was not enough. He did not want to have her for minutes or half an hour; he wanted her to belong to him completely, to believe in him. He waited. He did not want to spoil anything by excess.

One day he felt that the hour had come. "Listen to me, Käthe," he said, "I can't go on like this. I've got to tell you openly about this. You're not yourself out with that business of not living or dying. Wouldn't you work exclusively for me?"

He had seen this coming for a long time. He had not wanted it. Her fair face flushed; the three sharp vertical wrinkles appeared above her nose. "I want any charity," she said in her voice.

"We are stupid bourgeois prejudices," he answered with unaccustomed vehemence. "I'm not going to let you get away from me. You're simply too valuable to write letters for Herr Muller or to work for me."

"Have your Petermann," objected

"It doesn't mean anything in my life," he returned scornfully. "I need you; I want you. You help me by your mere presence; you inspire me. Don't act as if I'm asking you anything new. From the first day, it was settled that you must work for me alone. My offer isn't pity. I hadn't any money I would invite you to drop every other job and be here with me. Then you would just have to

not give up my work for Paul," said

Käthe decidedly. In suspense she waited to see what Oscar would say. Paul, in Oscar's place, would have limited himself to a clever, ironical remark. Oscar would simply forbid her to work for her brother. But she would not let him forbid her.

Yet Oscar did neither the one nor the other. He just said: "Very well, go on working for your half brother Paul." And he smiled, a slow, insolent, cruel, superior, contemptuous smile. He smiled Paul Cramer away. He disposed of him far more thoroughly with that smile than he could have with rage or scorn or the cleverest criticism.

Then, with his white, fleshy, well-cared-for, brutal hands, he reached for her. His ring—the new one with the large stone—cut into her flesh and hurt her. With fear, revulsion, pain, and rapture she suffered the embrace in which he crushed the objections of her clever brother Paul.

KÄTHE lived with her brother as if nothing had happened. Sometimes she still looked to him for an understanding of her relations with Oscar, for sympathy. She felt how greatly he endeavored to help her, but the way he expressed his feeling hurt her more than it helped.

Not only at home, but everywhere now, Paul came up against the Nazis. They gave him more cause for anger than flesh and blood could stand. They stood at every corner. Wherever one spat, they were there, giving themselves airs. And nowhere was there a serious determination to put an end to the evil. Everybody retreated before them, made concessions. It was enough to turn one's stomach. More and more publishers and newspapers hesitated to irritate their powerful opponent, and told Paul they must dispense with his collaboration if he would not drop his attacks on the Nazis.

He attacked the rabble all the more violently. He knew no fear and no caution. He attended Hitler meetings, heckled the speakers, got involved in fist fights.

Paul and Herr Kiepenrath, his publisher, sat in a recess in the lounge of the Eden Hotel; it was around teatime. Herr Kiepenrath was explaining to Paul why unfortunately he must refuse to publish his book on Richard Wagner.

They were still talking of this and that, unimportant matters, when Paul saw his sister come in with that Lautensack fellow. Paul himself, in his recess, could not immediately be seen. But he was well able to observe the pair as they selected a table in the reserved space along the dance floor, sat down, and gave their orders. They made a good couple; they looked as if they belonged together. With painful objectivity Paul noted that the fellow cut a fine figure, that he cut the best figure of any man in the lounge.

Herr Kiepenrath, glad that he had finished with breaking his unpleasant news, declared he must go. But Paul stayed. He sat in his recess, alone; his long, brown eyes stared bitterly at his sister and his enemy.

Oscar felt that something hostile was in the room. He looked around for it. He discovered the man in the recess, the gaunt gentleman with the high forehead, the prominent cheekbones, the bony nose. He did not know Paul. But, "Isn't that your half brother?" he asked Käthe carelessly, casually.

Käthe flushed.

"Don't you think it rather impudent," Oscar asked after a little while, "the way he's staring at us?"

Käthe retorted defiantly: "After all, Paul's got a right to sit here in the Eden too." But it was an awkward situation for them all. Paul sat there and stared across at them, turned his glance away, stared afresh. He felt that Oscar was behaving with much more assurance than he himself. He was sweating. He raged at his own awkwardness. Oscar would be able to

## What Kind of Men Do Debutantes Like?

dispose of a clumsy lout like himself in less than no time.

Oscar pretended to be unconcerned, chatting cheerfully. But he was not unconcerned. In the middle of an irrelevant sentence he interrupted himself and said with a wicked little smile: "He's going to have to pay for his impudence." And as she looked frightened, he added even more wickedly: "Don't be afraid. I won't make a scene. It won't be so bad. But I, too, want to have my little joke."

They sat thus, Oscar and Käthe at their table in the reserved space next the dance floor, Paul in his recess, for a long time. Neither wanted to retreat. Oscar and Käthe danced, went back to their table, chatted. Paul sat in his recess, read a paper, read a second, a third, then the first again. Finally, after an eternity, he called the waiter and paid.

From that moment on, Oscar did not let him out of his sight. He fixed his gaze first on Paul's face, then on his side, then on his back. Thus his eyes accompanied his enemy attentively, coolly, on his way from the recess to the exit, and it was quite a long way. Paul began to walk more stiffly, almost like a marionette. Oscar, always keeping his gaze on him, said between his teeth to Käthe, with grim enjoyment: "Now I'm going to make your honorable brother dance. Just watch."

In anxious suspense Käthe looked at Paul as he made his way out of the room. He walked as if strangely drawn, strangely unseeing. Now he was at the revolving door; she sighed in relief. But strange—he couldn't find the way out. He revolved in the revolving door, around and around; it was a pitiful, lamentable, ridiculous sight. It did not last long, that dance in the revolving door, certainly not a full minute. But for Käthe, and no doubt for Paul too, it was an eternity; until at last the doorman stopped the door and liberated Paul from his strange predicament.

From then on, there was mingled in all Käthe's feelings for Oscar, however close they were to each other, a shade of fear of the uncanny.

THAT same Herr Joachim Tischler to whom Oscar had foretold a weathered gravestone for the near future, and who had thereupon wanted to know further details, had not found it easy to get access to Oscar. First, at the office of the Society for the Dissemination of German World Philosophy they had demanded a staggeringly high fee; then he had to sign a whole list of guarantees: that he would not attempt to mislead the Master, that he would not talk about the consultations in public, that he would not hold Lautensack responsible for damages which might result from following his advice.

Finally, however, a consultation took place, and a second and a third. Oscar gave Herr Tischler advice, very precise advice according to certain instructions from Hannsjörg. Herr Tischler's industrial interests were similar to Dr. Kadereit's. Yet Dr. Kadereit had a wide margin; in his work he could take the long view, and what was permissible for him was too dangerous for Herr Tischler. Herr Tischler's undertakings tottered; it became clear that Dr. Kadereit held legal titles which granted him a certain influence over Herr Tischler's undertakings; Herr Tischler saw himself helplessly encircled by companies which formed part of Dr. Kadereit's interests.

Herr Tischler's face grew grayer and grayer. He directed his rage against Oscar, talked of betrayal, raved unrestrainedly. Several newspapers took up the matter.

Oscar rejected Herr Tischler's outbreaks with a haughty shrug. Nor did Hannsjörg take them seriously. They were insured against indemnity suits by Herr Tischler's signature; to the reporters, Hannsjörg said that Herr Tischler had probably misunder-

stood the clairvoyant. All in all, thought Hannsjörg, the affair merely gave Oscar publicity; people said that there must be something to a man whose advice was sought by the leaders of industry.

In the end Herr Tischler shot himself.

Oscar felt chilled. At bottom he had only intended it as a joke when he had foretold an early death to Tischler. Was that still mere chance? Was it not rather that his words, even when he just let them drop carelessly, were realized by fate? Indeed, his prophecy came true even to the topographical details. For Herr Tischler's heirs, angered by the small pickings, did not carry out his expensive wish of having his corpse transported to his home but had him buried in Woodland Cemetery.

But soon Oscar's dismay vanished, and instead of shuddering at fate he felt something like satisfaction, even something like admiration for himself.

Käthe, however, obviously felt otherwise. The next time he met her she was withdrawn, chill. This time it was Käthe who "saw." She saw, as if right before her eyes, how he wiped every trace of Herr Tischler, dead or alive, from his memory forever. But Oscar, the clairvoyant, the blind man, did not notice how his attitude had shaken Käthe's affection more than all Paul Cramer's clever analyses.

However that might be, Oscar's prophecy had come true; that was a fact. And if Herr Tischler had contributed to the heightening of Oscar's popularity by his curses and by his accusations that Oscar was responsible for his misfortune, his death was even greater propaganda for the seer. Not many felt revolted like Käthe; instead, the men and, above all, the women in the leading circles of that Berlin of 1932, were attracted by the faint odor of blood with which Oscar, like Count Zinsdorff, was now enveloped.

Oscar found an invitation to the Kadereits' in his mail. There was a note saying, "The Fuehrer is expected," and Ilse Kadereit had added in her firm, neat handwriting: "We need a little amusement." She had left it open to interpretation whether those words referred to the Fuehrer or to the seer.

Although Oscar had to be prepared to hear some of Ilse's sharp comments when he went to the Kadereits', he was full of pleasant expectation. He hadn't seen Ilse again since that evening; he found her very attractive, and—he knew his high and mighty women—in her eyes Herr Tischler's

suicide would be no less become new tails which the masterly hand the tailor had created for him.

This time it was Dr. Kadereit who badgered him with all sorts of gibes. "Your prophecies, my dear Oscar," said the blond giant, "are as good as a horse doctor's remedies. The robust patient, but finish off! He followed his joke with a kindly kind. Oscar took his quips in good nature.

The Fuehrer came early that evening and stayed a long time. That meant he was in the midst of the election campaign, and the battle was heated. He had to keep one's most important backer in a friendly mood; on that point Proell had insisted.

HITLER, incidentally, was in a bad form; one could hardly rush and overwork him. He was he singled out Oscar. "What is it, Comrade Lautensack?" "How are these elections going out? Is your premonition fulfilled?" Oscar plunged his gaze into the crowd and while all listened in suspense, he pronounced without haste, without voice, quietly assured: "It will be but an honorable German defeat."

No one spoke. For a while Oscar maintained a somber and portentous silence. Then he said: "I thank you for your honesty. After all, you can't help it, Lautensack. It is fate which imposes the humiliation of this demonstration."

"At least you're a courageous man," Ilse Kadereit whispered to Oscar in a sharp tongue.

Hitler, however, took a few steps back, then came back to Oscar. "Well, then, comrade," he said, looking into his eyes, "and I shall not let you foretell the tricks of fate, as we assume control," he pronounced. "I shall found a school for those days of which you have proved your shining representative."

Oscar thanked him warmly.

Then Hitler took his leave. "I shall be back," he said, "that my presence in the election circle must be so short. Sieg Heil, Herr Hitler," Dr. Kadereit answered.

When Oscar said goodby, Ilse told him that Dr. Kadereit would have a trip to the Ruhr in the next week to tend to his affairs in a factory in

## Spoilage Lies in Straining Eyes

MACHINIST makes an error of a thousandth of an inch in reading his gage...

Worker drills a hole a few hairbreadths off center in the nose section of a bomber...

Photographer misreads a 5 for a 3 in the figures she is copying...

As the result is spoilage! Tragic waste of precious material needed so quickly and liberally by our men on the fighting fronts of the world.

What is happening every day in United States war plants. It is a reflection of preventable personal weakness that

accounts for losses running monthly into thousands of tons and hours.

Some of it is due to carelessness. *But a great deal of it is caused by defective vision*—eyes that do not see well, that strain, tire, fog, jump out of focus and are bound to make mistakes and cause accidents.

Your eyes, which control 80% of your motions, are your number one production tools. It is your responsibility to keep them keen.

Don't wait until they fail you. Have them examined now. And take no chances. They are the only eyes you will ever have.

Go where you can be certain of the best professional and technical skills, which will protect your priceless vision and keep it at tops for its patriotic job.

1. Sends pain flying
2. Quickly removes corns
3. Prevents corns
4. Eases tight shoes

Dr. Scholl's Zino-pads instantly stop tormenting shoe friction; lift painful, nerve-rasping pressure—keep you foot-happy! Separate Medications supplied for quickly removing corns. Cost but a trifle.

**Dr. Scholl's Zino-pads**

quired from the late Herr Tischler. It would be nice of Oscar if some time during Dr. Kadereit's absence he would entertain her in his accustomed style.

THE presidential elections had brought the Nazis the expected defeat. A reaction followed; the Party's private army was banned, their funds were low. They had counted on this, but now it was important to adjust, to cut down on things.

All the Party organizations felt this, first of all the German World Philosophy.

Hannsjörg had to inform Oscar that he was no longer in a position to accede to his limitless demands; he would have to give up his present standard of living.

Oscar had thought things would continue in their progress upward the same as before.

And now Hannsjörg stood before him and dryly informed him: "It's all over. Your bubble's burst."

"For the time being," the little fellow now explained to him clearly and tersely, "I can promise you two thousand marks a month. But not one penny more."

"Two thousand marks," retorted Oscar grimly and contemptuously. "Now I know what to think of your promises."

"You are the most ungrateful piece of scum I've ever come across," said Hannsjörg. "Two thousand marks is a cabinet member's salary. If somebody had told you in Deggenburg or Munich that I was going to offer you a monthly stipend of two thousand marks, you'd have said the man was touched in the head."

Oscar could not well dispute that. He abandoned the fruitless debate and contented himself with summing up the situation with the words: "What a stinking mess." He sat there looking sullen and defeated.

This was where Hannsjörg wanted to have him. "Perhaps," he began cautiously after a pause, "I know a way you could bolster up your finances." Oscar looked up hopefully. "Your contract with the German World Philosophy stipulates that you shall be exclusively at the disposal of the society. In view of the circumstances, and loyal, stout and true as the society undoubtedly is, it would perhaps be willing to reconsider that clause."

"You mean—" asked Oscar in joyous excitement.

"Of course I can't guarantee anything," grinned Hannsjörg.

"Of course you can," Oscar contradicted him. "The German World Philosophy is you."

"All right," replied Hannsjörg, flattered and magnanimous. "If you're willing to appear publicly, there's no objection to it as far as the German World Philosophy is concerned."

OSCAR was inwardly much excited. When Alois had talked to him about doing an act together, they had been thinking of medium-sized towns, at most, of Munich. Now Oscar saw the Scala before him, the greatest vaudeville theater in the Reich; he saw his name in lights, giant billboards, crowds of onlookers hanging on his lips, staring at his hands, those hands which Tirschenreuth had represented so cruelly and ambiguously. Yes, the inner receptiveness of the crowd would inspire him, just as it did the Fuehrer; it would pour strength into him.

True, his offerings would have to be made even more sensational, his tricks even cruder; the mask would hang even higher and farther away from him, and it would be even more difficult for him to live up to it.

He was a fool if he let such considerations hinder him any longer. He would appear. Of course he would. He had just been waiting for Hannsjörg's offer. So now his economic difficulties were turning out to be a blessing.

"All right," he said in a martyred tone,

"if you can't find any other way out, I'll give a public performance."

Alois also was full of enthusiasm when he heard about the project. The expectation of being allowed to demonstrate his real art on a real stage instead of in "chamber performances" revived him like a plant that feels the rain after a long drought.

Oscar and Alois had often occupied themselves with the working out of an act such as was now expected of them; they tested every detail anew. Approved, accepted, discarded. They praised each other, called each other nincompoop, felt their two hearts beat as one, hurled spiteful character estimates at each other, were entranced by each other's ideas, quarreled, broke off for good, made it up again.

They agreed on the following: The act was to be called Fiction and Truth. First, Alois was to perform the best of his magic tricks. But these tricks were to be designated as such; in this way the genuineness of Oscar's manifestations which followed would be the more strongly underlined. Oscar himself was to begin by performing several telepathic and hypnotic experiments, as a matter of course without the use of tricks. Then he intended to climax his performance with a sensational offering: the raising of a spirit from the dead, combined with a prophecy.

After they had tried out a number of dead personages and discarded them, they decided to call up the dead naval hero, Brittling, from his watery grave. Alois wanted to make visible, if not the ghost himself, at least certain of his attributes; he was wonderful at those things. But Oscar refused sharply. He was relying on his powers of suggestion. If he was well prepared inwardly, then the dead man would speak out of him so clearly that everyone would see him.

He prepared himself inwardly. Alois brought him piles of pictures of the dead man and phonograph records of his voice. Behind locked doors, safeguarded by soundproof walls, Oscar practiced with Alois. The dead man's voice must sound so that it startled those who had known that voice; on the other hand it must have a slight admixture of the macabre. Finally Oscar hit it off so well that sometimes he had to restrain himself from speaking with the dead naval hero's voice on unsuitable occasions.

So far so good. But what was the ghost to foretell? After all one couldn't drag

him up out of Oscar's depths; his sepulchral voice utter a lot of lies. Oscar racked his brain, himself in his den, and stared at the wig's proud, noble face, at the pictures of the dead naval hero, nation came; Oscar's breast rent and dead.

In his dire need he confided in Hannsjörg. He scratched his head, relatively simple to find out the stances of those whose future "seen" until now. But this time Hannsjörg had to produce an event which concerned everybody, a great political move. He was tempted to say: "Do some dirty work." But he saw the dead man's eyes, it flattered him that in his distress had again been turned to him, and, "All right," he got you an event that you can

THE evening came nearer. Every technical detail had been worked out, but Oscar's heart felt heavier and heavier when he considered that he would never know what sensation he should expect the ghost foretell.

Then, two days before the performance, Hannsjörg appeared at his brother's apartment, excited and hurried. "I've got something to announce, beaming. Inwardly Oscar took a deep sigh of relief. But, "So?" said, acting as if unconcerned. However, he did not waste any time. He gave Oscar a rap for his insolent pretence; he was too full of his means of a tortuous game of hide-and-seek. He explained to his brother, they had decided to go to the point where he would dismiss the minister of war, the worst enemy. The newly appointed minister would then lift the ban on the private army. It might still take a while before this happened, but it was settled. Only a very small crowd was expected about it.

Oscar reflected. Then, casually, he said: "It's nice to hear you have taken the trouble to bring me news. It confirms what my inner voice has been saying."

For a fraction of a second Oscar was stupefied by this piece of effrontery. But again he controlled himself. He patted his brother on the head. "You really are something."

"Yes, we Lautensack brothers, we

# SEALRIGHT and NESTLÉ'S

PRESENT TO MRS. AMERICA  
NEW, SCIENTIFIC PACKAGE  
FOR COCOA

NESTLÉ'S EVERREADY COCOA has given up its metal package for the duration . . . and perhaps forever.

Packaging cocoa presents more problems than most people know, and to solve them all efficiently, economically and attractively, Nestle engineers and Sealright packaging experts pooled their knowledge, experience and research facilities.

You'll like the answer evolved through their months of experimenting, testing, rejecting . . . a totally new, specially lined, specially treated container . . . one more worthy example of Yankee ingenuity under war pressure. While it may appear at first glance to be merely another paper container, close examination will reveal how *different*

it is and why it protects the fine, full flavor and delicate aroma of this rich food drink.

And note the Sealright seal of sanitary service that identifies the new Nestle package. Watch for it at your grocer's. You'll find more and more of your favorite products taking advantage of specialized, non-critical Sealright packaging. The Sealright Company, Inc., Fulton, New York.

## Bonds and Taxes for Victory

**A**S THE Treasury Department keeps pointing out, it will take a lot of taxes and a lot of War Bond purchases to round up the money to pay for victory in this war.

We're glad to mention the matter here again, and to renew our earnest recommendations to our readers to do their utmost in both of these fields. In time of war, it is one of the citizen's chief duties to pay his taxes promptly and to buy all the War Bonds he can.

We would like to add, however—still in the same constructive mood—that if we had a pay-as-you-go system of income-tax collection, both the taxation and the War Bond pictures would be looking healthier than they do look now.

It is feared (and we think reasonably) that numerous income-tax payers, come March 15th, are going to have to cash some of their War Bonds in order to meet their first installments of income tax. The most cogent reason why this is feared is the fact that millions of these people never paid income taxes before, and a lot of them did not figure out their taxes soon enough to put aside enough money to pay them.

The big puzzle to us in the whole affair is why

the Treasury opposes the simple, clear-cut and businesslike Ruml plan for putting us on a pay-as-you-go basis at one jump, and why it keeps pushing muddled-headed, jumbled-up plans of its own.

Beardsley Ruml's scheme is the now well-known and widely approved proposal for "daylight saving" on income-tax collections. Under it, we would pay income taxes as usual, beginning March 15th, but they would be called payments on income earned this year, instead of last year. Appropriate safeguards would be set up against undue profit in isolated windfall cases, and the Treasury would lose money only in theory. Actually, it would collect taxes from people now making money, it would operate on a businesslike cash basis, and it would by-pass a myriad of unavoidable tax defaults in the year after the year in which the war boom ends.

To repeat, we hope everybody will pay taxes and buy bonds with the greatest enthusiasm for the duration. But we also hope the Treasury will come around pretty soon now to the common-sense attitude toward the Ruml plan. We further hope that Congress will adopt the Ruml plan, whether the Treasury likes it or not.

CONGRESS owes it to its own integrity, and to the American people, to repeal the so-called wartime limit on incomes. Congress is the body in which such alleged reforms should be made, if they are made at all. This one was made by decree, not by Congress. Hence, Congress should know better without ceremony or compunction.

The history of the so-called \$25,000 income limit is instructive. It was first noised through newspapers, early in the war, that British incomes were so high that nobody in England was able to make more than \$28,000 a year, no matter how much he might make.

This struck the Communists in the United States as a splendid idea. Presently it impressed President Roosevelt as a fine idea, too, and she began to talk about it in My Day. The Administration twice asked Congress to impose such a limit on incomes in this country—not by taxation but by flat decree. Congress twice refused. Then Jimmy Byrnes, economic adviser, went ahead and said it was the law.

Thus our government apes a British income tax, but does it in a completely underhanded and extralegal way.

To make matters more ridiculous and unjust, it is not a \$25,000 limit on all incomes. Actually, it is a \$67,200 limit on incomes earned by working on incomes from bonds, stocks, rents, etc. It is a decree which discriminates against industrious, enterprising people, in favor of people who live on their big money without at present working for it, though some of them worked in the past to produce the reserves on which they are now living.

On all counts, the thing is a mistake and an injustice. If it is allowed to stand, there is nothing to prevent the Executive branch of government, no matter what Congress may say, from limiting us all to \$2,500 a year, or \$25 a year, or even a few cents a year. This "law" which is not a law, can be kicked out, and kicked out fast.

## Nisei Soldiers

**N**ISEI is a word which up to now is known only to Americans east of the Pacific West. But now we have a notion will be well and favorably received by all of us before the war is over. A Nisei is an American-born citizen whose parents were Japanese.

There are a large number of Nisei in the United States. Most of them are as loyal to the United States as any other group of Americans. Until recently, they were not eligible for service in our Armed Forces in this war with Japan and its Axis allies.

About a month ago, Secretary of War Henry Stimson announced that Nisei from then on would be accepted for training in special units, including artillery, engineer and medical personnel, and would see actual fighting service in due course. Under present arrangements, Nisei can get into the military through draft boards in their communities.

It seems beyond dispute to us that this is the best way to handle the matter. We feel confident that these men will become tough and valiant soldiers for the country of their parents' adoption. From our boys' experiences with the Japanese in New Guinea and Guadalcanal, we can well understand why we want to turn some Japanese-descended fighting men against the original Japs.

We got the old familiar "That's the stuff!" out of this piece of news—a renewal of the confidence that American democracy can do such things and get away with them gloriously, because of its ability to attract and hold the loyalty of all manner of people. In opening the Army to the Nisei, we think the War Department did its best single day's work in

# Will you help him come back—Alive?

MAYBE you never thought of War Bonds—as *life-savers*—and yet that's exactly what they are.

Look at a War Bond . . .

A piece of paper. Weighs a tenth of an ounce, and is printed in black and green ink.

Read it. You'll see the interest you get from it—\$25 for every \$3 you invest, as it pays you \$25 for every \$3 in ten years.

Guaranteed by the Secretary of the Treasury of the United States, and backed by the power and good will of the world's mightiest nation.

But there are some things it *won't* tell you. Things that come from *your* heart. More important than interest. More important than security.

Lives. Of clean, smiling American boys. Hundreds

of thousands of them. Their lives depend upon bullets for the rifles they fire . . . shells for the cannon to blast Jap landing barges . . . bombs that drop from soaring planes . . . tanks that roar to the attack . . . great ships . . . submarines.

Supplied in abundance—and on time—they spell the difference between life and death—between Victory and defeat.

That is why it is up to us—here—now—every day—to buy War Bonds not only as an investment in our own future security—but as an investment in human lives today.

Think of *that* when you think of War Bonds. Buy them regularly—every payday—with 10% of your income—as a minimum goal.

And you, too, will help him come back—ALIVE!

## FACTS ABOUT WAR BONDS

1. War Bonds cost \$18.75 for which you receive \$25 in 10 years—or \$4 for every \$3.
2. War Bonds are the world's *safest* investment—guaranteed by the United States Government.
3. War Bonds can be made out in 1 name or 2, as co-owners.
4. War Bonds *cannot* go down in value. If they are lost, the Government will issue new ones.
5. War Bonds can be cashed in, in case of necessity, after 60 days.
6. War Bonds begin to accrue interest after one year.

## ANY WEEK

FIRST LT. E. LOUISE STEWART, Cover Girl, this issue, was sworn into the Women's Reserve of the Marine Corps, February 10th, one of its first five members. Got the yen when she edited a column "Your Men in Uniform" for a monthly magazine. Is now barnstorming the country, helping recruit girl Marines. Wellesley '39, home town, Villanova, Pa., Lieutenant Stewart is as pretty as her picture.

LONDON: For a simple guy with a genius for being provincial, who is always scared when faced with the prospect of leaving his native shores, we are really doing quite well in London. We're becoming quite international and we'd not be at all surprised if one of these days we'd be poking around in Velikie Luki or swimming in Lake Chad. Since our last column, we've been on a ship which caught fire, which sprang a leak, and which once, presumably bound for an English port, was less than three hundred miles from Gibraltar. Incidentally, we lost our luggage and most of our clothes en route. Frankly, we've had quite a time. When we got to London we were in a frame of mind like that of an Army lieutenant colonel who told us, "I'm sorry I joined up, but I don't regret it."

BETWEEN chores, while dashing up and down England, we've had time to drop into a court of law or two. We heard a gentleman who is supposed to be working in war production fined twenty dollars for being persistently late for work. The judge was going to be lenient with him until he discovered that the fellow lived next door to the shop. And then we began to shudder to think of the strike which would have followed a sentence like that in America. But the papers are full of such stuff.

RENO NOTE: When Mr. Justice Hodson parked himself on the woosack in Divorce Court the other day, he granted divorces to 728 couples in 27 minutes.

NATURALLY, Mr. Justice Hodson didn't take testimony, all that having been done in advance. So we had a look at the record. In one case a disillusioned man testified: "My mother-in-law hooked me for her daughter by giving me a marvelous dinner and say-

ing her daughter cooked it." And a woman who was tired of it all had told the court: "When our first-born cried for its bottle, my husband's mother said that it took after its father." War or no war, things are going on like that every day. Over at Newport on the Isle of Wight, Mr. Sidney Charles Wills was arrested. The newspaper reported Mr. Wills' predicament thus: "He was found in a curtained car in a disused chalk pit and was fined two pounds for misusing petrol. A police sergeant said that the car was lighted and was warmed by an oil stove. He was satisfied, he said, that Wills was courting. Wills, who had told the officer that he was delivering honey, and produced several bottles, said in court that he had had time to spare, so he drew off the road for a few minutes."

WE'VE been concerning ourselves with the postwar ambitions of British people—soldiers and civilians. The plans of the American soldier are easily discovered. All you have to do is drop in at any pub and listen. He wants to own a jeep. When this war is over, he intends to get that jeep, drive around to his girl's house and, with her, tour the United States. He intends to do this for a year before settling down. The jeep is by far the most popular of all war creations. It has almost become an almost mythological thing like the Flying Fortress. The jeep can fly over mountains and seas. It soars across the heavens. It is as swift as the wind. There is nothing real and unreal that it can't do. We overheard an American soldier talking jeep with a New Zealander. The latter said that he, too, was going to get a jeep after the war. He would tour the world. The American shook his head. Jeeps were not for anybody but an American. To any other national, a jeep was just "a cast-iron jalopy." And the American boy added, "Mister, I drive a jeep that makes its own gasoline, parks itself, don't think nothin' of bangin' right through a hill instead of running over it or 'round it. Don't need no garage for it because it burrows a hole in the ground for itself at night. I come out in the morning and can't see it. All I do is call its name, and it comes runnin'. Name's Wendell Willkie." . . . W. D.

Other foreign subscriptions including postage: \$6.50 a year. Remit by postal or express money order or check in United States funds to The Crowell-Collier Publishing Company, Springfield, Ohio. Changes of address should reach us five weeks in advance. Give both old and new addresses.

# CAUTION!

## Tuberculosis usually increases in Wartime

**D**OCTORS KNOW that tuberculosis usually increases in time of prolonged warfare. Such increases occurred during the last war, and have already been reported in some of the nations now at war.

*Thus forewarned, the people of our country can forearm themselves with the facts about tuberculosis, to help avoid this dangerous disease.*

Discovered early, tuberculosis is not often hard to cure. Unfortunately, early tuberculosis seldom advertises itself. Weeks or months may pass before even such vague signs appear as "touches of indigestion," a tired out feeling without good cause, or a steady loss of weight.

By the time more definite symptoms appear—a cough that hangs on, persistent pains in the chest, or blood-streaked sputum—severe damage may have been done. Curing the disease will then take longer and be more difficult.

Furthermore, during this period of development an infected person may have spread the germs among his family, his friends and his fellow workers. For tuberculosis is a germ disease and it may be "caught." Often the germs picked up in childhood lie quiet for years, only to become active at some time when bodily resistance has been lowered through sickness, undernourishment, or unusual physical strain. Wartime demands upon our energy make it doubly impor-

tant to guard against such conditions.

### How to be forearmed

If you have the slightest suspicion that a member of your family has tuberculosis, or if any member has been in contact with someone who has active tuberculosis, have him see the doctor at once. By means of a thorough physical examination, including the use of the X-ray, the doctor usually can determine whether the disease is present. His advice regarding treatment or subsequent "check ups" should be followed to the letter.

The modern treatment of tuberculosis makes use of rest—complete rest for 24 hours a day. This gives the infected lung a chance to heal. The natural resistance of the body is built up by a well-balanced diet of nourishing food. While it may not be necessary to "go away" to be cured, the doctor sometimes advises a stay in a sanatorium. The latter assures scientific treatment, educates the patient in self-care, and protects members of the family from possible infection.

In both peacetime and wartime, the best preventive measure against tuberculosis is to *keep physically fit*. Sufficient sleep, rest and exercise, and a well-balanced diet build up the body's resistance to most kinds of disease.

Metropolitan will send upon request a copy of a helpful booklet, "Tuberculosis."

## KEEP UP WITH THE WORK

By Freling Foster

Because animals are not allowed in public air-raid shelters in England, large numbers of them are killed or injured during bombings. At the height of the air raids in London, the number of animals buried alive and rescued totaled 7,241 in one week, many of them being so injured that they had to be sent to hospitals.

Of all the ships that have sailed in the 20,000 convoys which have been escorted by British naval vessels since England's entry into the war on September 3, 1939, only five ships per thousand have failed to reach port through enemy action.

In a recent experiment to determine the friction in a vacuum-type centrifuge, a small steel ball suspended magnetically in a vacuum was spun at 6,600,000 revolutions a minute by a magnetic force. When the force was cut off, the ball lost only one per cent of its speed in the first hour, which led to the estimate that it would have continued to spin for more than two months.—By R. K. Iler, Cleveland Heights, Ohio.

About 800 anti-Nazi or underground newspapers are being published today in the occupied countries of Europe. Their combined issues total approximately 1,500,000 copies, which have a hand-to-hand circulation of nearly 30,000,000 readers, who run the risk of being executed or imprisoned if they are caught possessing one.

America's first "life expectancy" tables for teeth, recently compiled from data on nearly 50,000 white adults of all ages in 130 localities, show that the average person has lost two teeth at the age of 18, five at 28, fourteen at 42, and twenty-three at 70.

Scientists now study living processes in humans and animals by feeding them harmless quantities of salt, iron or phosphorus, made radioactive artificially. Their course through the body may be traced with a Geiger Counter, an amplifying detector that converts the radioactive emanations into sound.

Victory gardens this year expected to reach a total of 6, on farms and 12,000,000 in cities. The vegetables produced by garden will be worth about \$10, a crop valued at \$420,000 anticipated.

In a recent poll, a number of Americans were asked if the Iri State had gone to war again many. Three per cent said yes, forty-seven per cent said they know.

The name of the Red Square in Moscow has no connection with socialism or communism as did the Red Army and the Red Star paper. The square was given its name centuries ago and its English form of the Russian "krasnaya," which means both beautiful.

The war is now costing the United States 61.9 per cent of its national income, the United Kingdom 60 per cent, Canada 45.4, Australia 40 per cent, New Zealand 63.4.—By Charles W. Ton, Wheeling, West Virginia.

In the production of the engines for a large bomber, the cost on the cutters and other tools from \$3,200 to \$4,000.

About thirty-eight per cent of the people of this country will not be able to afford all the meat which they are entitled to purchase under rationing.—By Robert Goodhue, Punta Florida.

Vatican City, the state within a state, is not wholly self-contained. Under an extraterritorial arrangement with the Italian government, some of its forty buildings are outside the walls of the Holy See, some at a considerable distance.

## FM radio brings you "natural color" music

is just the difference between a photograph and  
n's best girl, in person!

entists will tell you that every note of music  
ear is composed of (1) a "fundamental" tone,  
(2) a series of "overtones."

r technical reasons, which needn't concern us  
conventional radio cannot reproduce all the  
ones of a given musical instrument. As a  
t, something is lacking — some of the depth  
urity of tone has been lost.

t a new kind of radio, known as FM, repro-  
s tones and overtones as they have never been  
duced before . . . brings you "natural color"  
e without static or interference of any kind!

The General Electric FM (Frequency Modula-  
tion) Radio is an *electronic* instrument. It was de-  
veloped by General Electric engineers working with  
Major E. H. Armstrong, originator of FM radio.

These same scientists and engineers have devel-  
oped other amazing electronic tubes which open  
doors automatically, peer into tiny viruses believed  
to be the cause of the common cold, accomplish the  
miracle of television, and promise a safer, more  
comfortable world for all of us.

Today, General Electric FM radio is fighting the  
enemy on land, on sea, and in the air. Tomorrow,  
General Electric FM radio will offer you a wholly  
new conception of radio performance!

# WING TALK

After twelve days of feasting, the flier was brought to Tulagi by the natives in a war canoe

**A**MONG the occupational ailments of airmen is the beach-crash grin, a form of facial paralysis which has a land equivalent in the ground-loop grin.

The beach-crash grin happens this way: You take a PBY or other seaplane out of a line of similar craft moored along a dock or a beach. Under your own power, you unpark the ship, get her in the air and have a pleasant, successful flight. You come down and head back to your place in the mooring line. You have a tail wind, and you can't decide whether to use power or to cut your engines and let the wind bring you in. It would be pretty flashy to let the breeze do the work, so you decide to drift. You figure the wind, taxi into just the right spot, from where you are perfectly certain the wind will push you exactly into the mooring space you want to reach.

But after you've drifted along a bit, you realize something's wrong. Either your figures were sour, or the wind has shifted, or you forgot about the current, or something. Your engines are off, and you can't possibly get them started in time to regain control of your ship. You are heading, not for the empty mooring place, but for another craft tied near by. Nothing you can do can keep you from crashing. It won't be a serious smashup, but instead of coming in with easy, well-timed elegance, you will arrive in a pocket of ripping wings and humiliation.

At which point your face freezes into the beach-crash grin. It's a silly grin, like Charlie McCarthy's. It is an embarrassed, apologetic grin. There's nobody within a hundred yards to see it, but you beam most ingratiatingly at the empty air around you—until finally the crash snaps you out of it.

The ground-loop grin fastens itself upon your face as you come in for a clean landing and suddenly realize that the loop is inevitable. The grin stays fixed until the loop ends, usually when you tear off a wing.

**T**HOSE who think that any old guy with reasonable reflexes and measurable common sense can fly a plane make two major points. First, they say the RAF has taken everything from soda jerkers to New York playboys and made them into elegant military pilots. A good many of the boys in the Eagle Squadron—the groups of Americans who started fighting as part of the RAF before we were in the war—had been rejected by our Army Air Forces. Yet they did some of the finest flying of the war. Obviously, any male cannot handle military planes, even if he's above average physically and mentally. But the antisuperman clique insist that we needn't be quite so choosy as we are in selecting Army and Navy pilots.

The second point goes back to the argument that anyone who can drive an automobile should be able to learn to fly a private plane, even the least foolproof pre-war private plane. The family airplanes after the war will be even easier to handle and safer. The whole future of private fly-

ing in this country depends upon convincing the public that Mom and Pop can fly their own planes just as readily as J can.

We will have thousands of young left over from this war, who can fly a thing. But by themselves, they won't make a family affair, as the automobile is. Yet the manufacturers will have family planes all ready for us. They use new miracle materials, light and cheap. They will be surprisingly priced and simple. If enough people are willing to fly them, we will have a new era in transportation. Don't worry if you haven't even one little superman in your home. Joe Doaks will be able to do as well. You don't need to be a B. Oldfield or a Malcolm Campbell to fly a flivver.

**A** NAVY flier in the Solomons recently became so absorbed in his work that he ran out of gas. After considerable maneuvering, he managed to crawl whole from a crash landing on an island near Guadalcanal.

As he unraveled himself from the wreckage, he found he was surrounded by a ring of rather frightening natives. He looked like illustrations out of the National Geographic Magazine. He was thoroughly prepared to be boiled in something, and to have his memorabilia petuated by having his skull faster a pole in the chief's yard. Instead, he was escorted to a native village and seated on a festive board. Eager natives put all manner of fine food into his mouth.

After twelve days of gorging on some sort of roast duck and broiled fish, he was brought back triumphantly to Tulagi in a war canoe. He was fatter and happier than his more fortunate colleagues who hadn't cracked up, but who hadn't been eating any too well for a while. . . . **ROBERT MCCOY**

# Could **THIS** *hasten the day of Victory?*

IS HARD TO REALIZE that Guadalcanal and Bizerte are really the far corners of our own front . . . That the men fighting this "far away" war are fighting to defend or destroy our own towns, our homes and families . . . That Americans dying thousands of miles away are dying to keep Axis hordes off your very doorstep.

When enemy bombs rained down tonight on a sleeping American town . . . If the plaster of our own bedrooms, shattered by concussion, came down around our heads . . .

We'd instantly move months closer to victory! We'd suddenly find it easy to dig up *more* dollars for War Bonds. We'd face the truth that our dollars will be worthless—if they don't buy victory!

Yet the need for those dollars is no less today than when our soldiers battled on our very doorsteps. The fury of war *will stay far away only if our dollars join our men* to keep it there!

It's no less our war because our men dig their foxholes out of sight of our homes. No less our freedom is at stake—because we're spared from hearing the scream of shells and bombs our soldiers listen to day and night. No less our fight—because our men face danger without asking us to share it.

Think of your War Bonds as "Your War" Bonds, ask yourself if *your* freedom isn't worth some other sacrifice. Remember that War Bonds really give you nothing—that they're only dollars *loaned*, to be paid back again, with interest, for you to spend again.

And remember that dollars *loaned* for just one War Bond could mean another Axis plane brought down in flames. Or a deadly machine gun nest silenced forever. And the lives of American soldiers saved.

**STEWART-WARNER  
CORPORATION**  
CHICAGO, ILLINOIS

THIS message is published solely in the interest of national understanding and unity in the war effort. Stewart-Warner plants have long since been converted to the making of essential materials for war and war production.

*The man who had* "NEVER WALKED A MILE"!

... he's proud of the privilege to serve his sector now... to set an example for calm confidence... to do his part, like millions of others, at home.

## EVERYTHING'S CHANGED NOW

Yes, instead of General's extra safety and long mileage for the highway... it is tools of war today. The same manufacturing skill that brought you General's peacetime Top-Quality is now giving our fighting men countless rubber products vital for Victory. That's why rubber is so precious; why you must *save your tires*.

But, as General's technicians discover new materials, new compounds, new

methods to make rubber *fight better*... they are discovering also how to make an even finer tire for your car.

Thus, on that great day to come, you can look forward to still more change... *for the better*. General's quarter-century leadership in *Top-Quality*; its unique ability in getting *the most* out of rubber... are your assurance of a General Tire even farther ahead of ordinary tires than the famed Generals of the past.

THE GENERAL TIRE & RUBBER COMPANY • AKRON, OHIO

### COMING? SYNTHETICS, RAYON, NYLON?

The General Tire of the future is well worth dreaming about! Imagine for yourself what new materials and processes may mean. Think of mileage that may outlast your car. Think of much less air pressure; no blowouts; lighter weight, yet more strength; the heat problem ended. *True? You'll have to wait to see!* But, you can count on this: General will continue to give you the best things first, just as it has for 25 years.

*The*  
**GENERAL  
TIRE**

The child solemnly crossed her heart and answered, "Hope to die." There was a hush in the office. Miss Flannigan tittered

## Concerning A Woman of Sin

Ben Hecht

Illustrated by Gilbert Darling

ennervating story of Daisy Marcher and her conquest of Hollywood, an event from the movie capital will never recover. And perhaps you won't either. This is the first of two parts

EVERY year or so, a new conqueror appears in Hollywood and, seizing it by the tail, swings it around his head. And for the year or so, this conqueror rides a gold elephant to work and lives in a dream boat. Sometimes there are two, three or four conquerors in Hollywood all at the same time, and all swinging it around their heads. On such occasions the hostesses, bar-keepers and publicity departments of the movie capital break down and the neigh-

boring spas become crowded with convalescents.

But before I can start this account of Daisy Marcher's conquest of Hollywood it will be wise to explain a few things about the movie capital. It has been my experience that it is best to approach a tale of cinemaland like an anthropologist and discuss the odd tribal customs of the place so that the reader will be partly persuaded at least that one is not writing with an opium pipe in one hand. I will confine these preliminaries only to that phase of the movies which make possible the unnerving advent of a Daisy Marcher.

**I**N HOLLYWOOD a star may receive from \$100,000 to \$150,000 for acting in a single picture. This chore occupies about ten weeks of the star's time, which means, on a basis of an eight-hour day, that the star receives roughly from five to seven dollars a minute for acting. This includes the many minutes (more than two thirds

of them) during which the star lies dormant in the dressing room; also the many minutes in which the star gets mad and won't act at all; likewise the many minutes during which the star is kept from the full practice of his or her art by infidelity, amnesia or a hang-over.

Similar pots of gold are handed over to the top writers and directors of movies, who are sometimes incapacitated for whole weeks at a time (while on salary) by being unable to think at all. But whether they are thinking or merely sitting staring at the wall, these artists receive from four to six dollars a minute. In fact there is no one connected with the artistic side of movie-making—not excluding somebody called the producer who usually just comes along for the ride—who does not receive some staggering sum for his participation.

There are many reasons why we movie-makers are so prodigiously rewarded for tasks that might well come under the head

of trivia. I will skip most of them as having nothing to do with Daisy Marcher and offer only the one that is pertinent—the Hollywood agent. Foremost in the forces that have skyrocketed the earnings of the movie artist has been this peculiar sleight-of-hand worker.

His emergence on the Hollywood scene some twenty years ago was occasioned by the fact that most of the movie artists were unable to add or subtract and also needed someone to look up telephone numbers for them. From these humble beginnings the agent (the Great Agent) has risen to breath-taking heights.

The Great Agent has under his wing today bevy of stars and geniuses whose venality he has inflamed (a not difficult task) with purring tales of their worth. The peddling of these treasure-troves is the simplest part of his labors. For it was the agent who first uncovered the Basic Principle of Hollywood. This is that the Pharaohs who run the studios measure their own greatness by the amount of money they are able to spend. There is, in fact, no other activity open to them. The Pharaoh who can spend the most money on stars and geniuses becomes automatically the most dazzling figure in the cinema capital. Thus the competition to run the studios into bankruptcy is an extremely hot one. That all the studios are not quickly

(Continued on page 30)

THOSE

# Beautiful Beginnings

By Josephine Bentham

ILLUSTRATED BY HARRY BECKHOFF

Together, in a very indignant fashion, they marched out of the house, and Julie looked after them wistfully

**JULIE HERRICK** woke up in the morning with the names of men tumbling around in her mind, but after a second or two, the right name would come clear to her drowsy consciousness. She remembered, on this particular morning, that she was madly in love with Bob Waldron. Captain Waldron of the U. S. Army. She smiled and turned a flushed face back to the pillow.

It was easy for Julie Herrick to fall in love and, contrary to all the solemn

preachments, it was just as easy for her to recapture, each time, all the breath-taking wonder of falling in love.

The present affair had begun, as had several others, with a vague and exciting sense of recognition. "I'm sorry I was staring!" she would say with a queer little catch in her voice. "But—haven't I met you somewhere before?" This was no part of any planned technique. She was sincere about it. She would feel that she must actually have known this particular man—

if only in her childhood—if only in her dreams. He would be sincere, too, when he said that she couldn't have met him before, that he would have remembered the meeting, that he would have been thinking, in fact, of little else.

The first date would follow this conversation with practically no delay, and the memory of this first date would have Julie burying a flushed face in her pillow—as she was doing now. And each time she would assure herself that this time it was

It cost little to know Julie most, a broken heart. And was a small price for her loved one of the truly remarkable young girls of our

the real thing. This was going to last time it was the right one—Bob Waldron was the right one. In all the other instances, the preliminaries had faded into bleak, unmemorable intervals which the man had got mad and away or married another girl or taken up stamp collecting. And she would be ready and free again for the stab of rapture and wonder. . . .

"Well!" her sister Martha said thoughtfully, "you were never coming down for breakfast!"

Julie smiled.

"I don't have to go to work on days," she said cheerfully. "Just this afternoon."

Martha's face failed to brighten in otic assent. It was one thing to set teens for the entertainment of the service. It was another thing to make the main attraction in a canteen for and neglected young officers. This project Martha had disapproved from beginning. It would lead, she felt, to good for Julie.

**THERE** had always been enough in Julie's life, but since the war, there had been more men, and more attractive. In the old days, Julie hadn't been able to resist a really good tweed coat—stand no chance at all with a uniform.

Martha frowned faintly and cornered her thought aloud. "And you were a teen," she said, "your last birthday."

Julie sputtered over the rim of her cup. "Don't make me laugh when I have my mouth full of toast! What's my nineteen got to do with anything?"

"It's just that I think it's time you get some sense. If you're ever going to get married and settle down—"

"Martha!" Julie's impetuous protest upset the sugar bowl. She put it back on its fat blue legs and leaned forward angrily. "That's just what I want to talk about! I want to tell you first of all that I am going to settle down! I'm so happy about it—I've never been so happy in my life! It's Bob, Martha!"

Martha had her own recollection of dreamy but acute. She had heard her say something very much like this. It's Garth, Martha. It's Jimmy. It's Beechy. . . .

Nobody but Martha had ever bothered to keep track of them. It was Martha who bore the whole burden of her younger sister's frivolity. George, who was Martha's husband, wouldn't listen to a word Julie said. She couldn't help being impatient. That was part of her. Martha was to remember how you were. Martha was to be patient. In these days, Julie would find the man who could really hold her—keep her by one fireside for the rest of her life—that was George's theory—and it had always been a trifle fatuous. Julie was concerned.

They were both indebted to Martha. Martha was ready, if not eager, to help. When George came out of the hospital last fall, Julie had moved into the home to contribute more than her share to the household expenses. Then, to her had been wonderfully good to the children. Junior and little Gladys dearly loved their Aunt Julie—and this may have been cupboard love, but it also may have been

(Continued on page 74)

# GREEK TRAGEDY-1943

BY NIKOL PAPPAS

Two years ago, the Axis occupied Greece. Since then, Greek history has been an incredible story of human endurance. In the face of calculated starvation and disease, Greeks still find the strength to fight their enemies

All day and every day, Athens' citizens search for food. When starvation overtakes them, their bodies lie in the streets unidentified by their relatives, who thus avoid turning in their bread tickets

NIKOL PAPPAS is a name like John Smith in America, and not my real name. I cannot tell you what it is, for I still have friends in Greece. I am one of those who recently escaped to America. Of course, I cannot tell you how that was managed, either. But I can tell you something of what things are like inside that stricken country, for I lived there through nearly two years of German occupation and saw with my own eyes things that are almost unbelievable.

At the time of Greece's capitulation, I was practicing medicine in one of the hospitals of Athens. When the Germans and Italians marched in, they took over, along with everything else, all the hospitals. There were roughly 4,000 beds in the Athens hospitals. Of these, 200 were left for Greece's dying and wounded. When it became a question of serving only my country's oppressors, I resigned from the hospital and went into private practice. The Germans had enough doctors of their own, so they made no effort to stop me.

Three months after I had started my private practice, I was no longer able to obtain medicines. There were some to be had, but the price was prohibitive. I still went out on calls—in fact, the number of them steadily increased—but they were little more than a gesture. What good were prescriptions without medicines? More important, what good were medicines if no food was available? The most I could do—and the same went for other doctors—was provide a little moral support. But moral support doesn't keep people from dying of disease and starvation.

In Athens, all business had resolved itself into the business of keeping alive. You walk along the quays and see children picking up the heads and bones of fish and eating them greedily. Others go from door to door begging for food. From the ends of their thin, ropelike arms swing small tin cans in which they collect the scraps of food given to them. Their complexion is straw-yellow, their eyes wild and feverish, their bodies swollen with edema. Mutilated soldiers, sometimes without arms or legs, are wheeled around in soap boxes, grinding their teeth with pain. The wheel chairs have all been taken by the Germans.

One day a young woman with a baby in her arms knocked at our door and pleaded for food. Our first impulse was to turn her away. There were so many knocks on the door. But she was so pathetic-looking that we let her stay and gave her a few beans and raisins. Her breasts were torn and bleeding, the baby had sucked them to shreds. The baby itself was no less pitiful. Eczema had made its face an open wound and its fingers were literally chewed to the bone, with pieces of raw flesh hanging from them.

Not far from my home lived a war widow with two children. One of her children died and she buried him secretly at night in her own courtyard. By not reporting his death, she was able to retain his bread ticket. With that extra ration she hoped to keep her other child alive.

Dead bodies clutter the gutters of Athens. They lie there, sometimes a week at a time, unidentified by their relatives, who thus avoid turning in their bread tickets; the people of Greece have learned of necessity to think only of the living.

Many of these corpses had been tubercular cases who had come in from outlying villages. Their friends and relatives, unable to help them, had sent them to Athens for medical attention. There they were turned down by one hospital after another. Finally, becoming too weak to go any farther, they had died in the street.

The Italians and Germans, of course, have an abundance of everything. They have taken over the best hotels, movies, restaurants and practically all the fuel. They drink beer, wine and vermouth. The

(Continued on page 76)

# WEEK END IN NEW YORK

By Harry Henderson and Sam Shaw

Hotel lobbies, restaurants, subway exits are crowded meeting places. Sgt. John Paluch is caught meeting—and kissing—his wife Veronica on hotel steps

Itinerant chorus-girl photographer takes a souvenir picture of the Zieder family at Billy Rose's Diamond Horseshoe, glitter night club for out-of-towners. Most of the city's new visitors don't go to the swank, soft light places on the East Side, but prefer the noise and tinsel of Broadway

**T**ODAY, Broadway's lights are blacked out and New York is cool with cash. Manhattan has become the week-end spot of the world. Everyone is making money, spending money, and there's plenty of money where that came from. Aircraft workers, girl riveters, soldiers and sailors of the world and their relatives crowd the sidewalks and subways, and girls turn down offers of \$100 a week, hot-dog stands become restaurants.

It's not just Broadway that booms. Department stores from 14th Street to Central Park are crowded with buyers. The only problem is finding something to sell them. Recently one store got a shipment of 8,000 pairs of nylon and before the store could advertise them they were gone.

The Statue of Liberty boat shoves off from the Battery with as many customers as it can handle and the Empire State Building officials, reporting their five-millionth visitor, declare today's crowds exceed anything seen since the World's Fair. The straight rubberneck business is so good that sightseeing people, who lost their busses to the war, are getting customers to pay \$2.25 each for a three-hour walk around Manhattan. New York has become the Standing Room Only capital of the world. There are people standing in line to buy hot dogs, to get a restaurant table, to get a bus, to get a taxi to miss the \$64 question and, Madam, the line forms at the rear.

In one night's wandering you can see uniforms from most of the nations . . . a Polish colonel, a Dutch Javanese sailor, Norwegian men of the R.A.F., red pomponned French sailors, Brazilian naval aviators. With strange instinct each seems to find fellow countrymen among the city's seven millions. French go to the French restaurants in the 40's; Polish go to the Woodstock. Forty or fifty torpedoed seamen from India are in a Mills Hotel, where they kneel in their tiny rooms five times daily and pray toward Mecca.

Perhaps hardest pressed by these new millions are the hotel men. If you haven't reservations, chances are you'll sleep on a cot. To speed up room turnover, most hotels have moved up their checking-out hour and are discouraging permanent guests. Half a dozen Times Square hotels which have been verging on bankruptcy for years were snapped up by realty interests.

It's a popular saying with columnists that if you stand on certain street corners in New York you're bound to see someone from home. Recently two American sailors recognized two French sailors on top of the Empire State Building. They had fought against one another in Africa. An observatory employee acted as interpreter and it wasn't long before the French were asking how to sing Praise the Lord and Pass the Ammunition.

Thousands who have never been in New York before, thousands who haven't been there since their honeymoons, thousands who used to go South for the winter, thousands who play in New York, all add up to millions who have money that jingle-jangle-jingles.

Six months ago the Broadway Association started a promotional campaign to advertise New York as a vacation playland. But they gave up soon after because there's no sense in hyping a winner.

Honeymooning defense couple from Chelsea, Massachusetts, enjoy breakfast in bed at the Hotel Lincoln. The day before they had become Mr. and Mrs. Leonard Quasarano. She works in a sailors' uniform factory; he is a General Electric millwright. Their itinerary: Statue of Liberty, the Empire State Building, Radio City Music Hall, Leon and Eddie's night

ss is booming at the shooting gallery and pinball emporiums. They go to Florida for the winter, but not now! Cpl. John Robson, above, Helen Heller how to score a bull's-eye on the moving shadow planes

Bowling alleys are being booked solid for twenty-four hours a day. Over 1,000 new alleys have been built to accommodate factory workers' leagues. Marjorie Snook, above, throws a ball which nearly clips the cameraman

and Chambru, torpedoed Indian merchantmen, are impressed by skyscrapers. They live in a Mills Hotel (cheap, cash in advance) at Times Square

Visitors buy armloads of gifts for the "folks back home." Londoners Maurice Prout and Fred Weaver, R. A. F., buy brushes to send to England

avenue shoppers ogle jewels and wear mink. Above 45th Street the demand is for the luxury items, and all stores vie in fancy window displays. With new dimout curtains they can show their wares at night. Dresses, cosmetics, diamonds, furs are rapid-turnover items these days

Machinery-minded youngster Charles Wenzel explains machine-gun sights to his parents at the Museum of Science and Industry. Nearly all city museums report large increases in visitors. Many are natives who, since they can't motor to the country for week ends, take time to discover their city

# FORGOTTEN FRONT

By Corey Ford

Eager ground crews swarm over an Army medium bomber, returning from a stormy session over Kiska, and count the holes made by Jap antiaircraft fire. These are the first color photographs published of our most advanced Aleutian base

In the Pilot's Alert Quonset hut, where combat crews are briefed, the squadron leader points out the location of the Jap camp area on a relief map of Kiska. Cribbage, poker, magazines help pass time until the weather breaks

In fog and cold and silence, these forgotten men fight a nearly forgotten war under heartbreaking difficulties. The life—and death—in an Aleutian out-

**W**E EVEN had a tree. It wasn't much of a tree, but it was pretty good for the Aleutians, for a thousand miles there isn't a shrub taller than your knee. No, that's not quite true—there's another tree, on Umnak Island. A couple of Army men flew it all the way from the Alaska mainland, and it stands inside a wooden stockade with a big sign: "Umnak National Forest." The men pause in front of it and then stare at it in silence. It's funny how you get to long for the sight of a real tree, after a while.

Nothing seems quite real, as a matter of fact, here at our most advanced base in the Andreanof Islands, three-quarters of the way down the lonely Aleutian chain. A bomb's throw from Jap-held Kiska, only a few odd miles from Japan itself. The islands, as you see them, are no more than a staggered series of sunken volcanic peaks, separated sometimes by hundreds of miles of open water: fog-shrouded, obscure as death. Unlike the mainland of Alaska, where the thermometer reaches seventy below, the temperature in the Aleutians seldom gets down to zero; the mountain peaks are perpetually ice-capped but most slopes are bare, covered with an olive-drab grass that gives the island a strikingly military look. Snow comes one day and melts the next; the roads are alternately hip-deep in mud or frozen into a badlands of ruts and holes, over which bump an endless succession of tractors and Army trucks. The men live in square tents, or in round-topped sheet-metal Quonset huts deep into the hillsides at crazy angles, amid a never-land of revetments, trailing telephone wires, holes, concealed gun emplacements. The wind blows day and night with a steady banshee wail; seals and lions plunge in the seething surf; the ubiquitous wheel and bank and race the patrol planes over the tundra. The treeless hills around you are as unreal as the side of the moon.

But the mud is real, and wet feet are real, and without fresh meat or milk or eggs or fruit is real; getting any mail from home is real; there hadn't been a mail boat for two months when I arrived. No baths, no entertainment, no towns to go to, no recreation for a thousand miles is real. The waiting is real—the realest thing of all up here. Waiting for the weather to break. Waiting to try another bombing mission over the Japanese. Waiting for your wings to ice up, perhaps, or to sock in your home field, or your plane to crash against an uncharted mountainside in the fog. A man who flies here carries an undated death warrant in his pocket; sooner or later he knows the weather will get him, sooner or later he won't get back. Waiting, that, day after day, is very real. . . .

## Invasion Route to Japan

It's a sort of forgotten war. You haven't heard much about it. You hear about the war in Africa, the Solomons, but you never hear of the Aleutians. The very name of the islands sounds illusory. You're not entirely sure where they are, until you look at a map of Alaska, which curiously resembles a profile of Uncle Sam, and you see the Aleutian archipelago as Uncle Sam's chin whiskers wagging far out across the Pacific toward the clutching fingers of Japan. You realize, until you measure it on a globe, that the islands stretch so far west; even the beginning of the chain is 500 miles west of Hawaii; our base in the Andreanof Islands is actually parallel with New Zealand; and the Jap-occupied island of Attu, 900 miles from our naval base at Dutch Harbor, is only about 700 miles from the Japanese naval base at Paramushiro in the Kuril Islands. You are surprised, looking at your globe, to see the long sickle curve of the islands slices midway through the shortest route from Seattle to Tokyo. You realize that these forgotten islands offer by all odds the direct invasion route to the heart of Japan.

Oh, maybe you hear of it once in a while. You see a brief Navy communiqué, buried somewhere in the news, stating that our land-based bombers—Army Air Forces, in case the communiqué doesn't make it clear—have attacked enemy shipping again. (Continued on page 80)

Army Air Forces pilots, ready for a mission, in the foreground, to the author (center) the route they plan to take in making their bombing run over the enemy

# It's fun to be healthy! Try Hemo... drink your Vitamins and like 'em!

## JUST ONE GLASS OF HEMO GIVES YOU:

The Vitamin A in 3 boiled eggs!

PLUS

The Vitamin B<sub>1</sub> in 4 slices of whole wheat bread!

PLUS

The Vitamin B<sub>2</sub> (G) in 4 servings of spinach!

PLUS

The Vitamin D in 3 servings of beef liver!

PLUS

The Iron in ½ pound of beef!

PLUS

The Calcium & Phosphorus in 2 servings of cauliflower and 1 serving of cooked green beans combined!

PLUS

Significant quantity of Niacin.

How about you? 3 out of 4 Americans may not get enough vitamins with their meals (Government nutrition authorities tell us so!)... That's why thousands of people add a glass of swell-tasting HEMO to their daily diet...

Look what you get in one glass of HEMO. When mixed in milk, HEMO gives you half your daily requirements of Vitamins A, B<sub>1</sub>, B<sub>2</sub> (G), D, and Iron, Calcium, and Phosphorus... PLUS a significant quantity of Niacin... P.S. We purposely omitted Vitamin C from HEMO... you can get it easily if you drink fruit and tomato juices!

Ask war workers! Many men and women who do vital war work drink HEMO! They need their vitamins every day... and they like 'em the HEMO way! So will you!

Children love HEMO, too! Tastes like the grandest malted—only better! And HEMO's wonderful for them—hot or cold!—with lunch or dinner, or an after-school snack.

Keep HEMO on the pantry shelf. The full-pound jar—24 delicious drinks—costs 59¢ at grocery and drug stores. HEMO for one serving costs only 2½¢!... And here's a tip for fountain lunchers: You can have HEMO made up in any flavor you prefer!

# Borden's Hemo

IT'S BORDEN'S, IT'S GOT TO BE GOOD!

# LUCKY STRIKE MEANS FINE TOBACCO!

"Getting ready for auction day." Painted from life on a Southern farm by Aaron Bohrod.

DINT of considerable effort, I managed to get to France in the early days of 1918. Because of my bad and an imperfect ear, only the M.A. would have me. My old friend Allen of Kansas transferred from the Red Cross to the Y.M.C.A. about the same time, and together we did our chores in the shadow of the Big Berthas.

When Henry was elected governor of Kansas *in absentia*, he had to return to the state. I accompanied him as far as the train. I was fortified with papers from the War Department requesting G.H.Q. to waive my physical disabilities and give me a commission with a combat force. There it was, my disposition would show my interest against the Huns.

The Huns must have heard what was up, for before I could complete my transfer, the Armistice was signed and I set sail for home.

I arrived in New York on January 1. Theodore Roosevelt was in the city, but I could not see him. When I got off from the train in Chicago a few days later, I was met with the announcement that Teddy was dead. Something had happened to me that has never been repeated.

My interest almost entirely in local state politics. Why try to reform a state that was bullheaded in its inequities? I followed closely the doings in Washington. Woodrow Wilson, whom I had admired but whom I had never supported, was under the strain, and national power slipped from his enfeebled grasp.

Republican irreconcilables were in the majority. Aside from the Democratic regulars, who were not too dependable, there was to be only one man of national standing by Wilson, and this was J. Edgar Hoover, who had appealed to the public for a Democratic Congress in 1918. But even if Hoover had been the only one, on the occasion, he was spending all his time moistening his forefinger and holding it aloft to determine from which political wind might be blowing. He didn't make up his mind whether to support a Republican, a Democrat, or an Independent, and it was still going to be a few days before he decided. He did know he wanted to be President.

Coming over to the isolationist side (I confess it), even for a time, I now know how wrong I was and I hereby

During World War I, Harold Ickes (with his stepson, Wilmarth, left) was with the Y.M.C.A. in France. He asked for a transfer to a combat unit, but the Germans heard about it and called off the war

do penance for that temporary aberration. Behold me in sackcloth and ashes—now a confirmed believer in the principle that we live in the world, that we are of the world, and that we can't play ostrich and safely bet that some rangy (or is "mangy" the word?) beast named Hitler won't sneak up on us and pull out our tail feathers.

The miserable machinations that went on in the 1920 Republican convention—the first political side show in which I could work up an interest after my return from abroad—were nauseating. They gripe me still when I think of them.

Medill McCormick, thumbing his nose at the people, was happily hopping hither and yon as one of the inside group determined upon carrying out the will of the notorious machine which we both had fought sincerely, I thought, and with conviction, in previous battles. Boies Penrose lay on his deathbed in Philadelphia, but he joined by telephone in the conspiracy that was being brewed in the small smoke-filled room where an evil candidate was to emerge from the witches' caldron.

Two sons of Theodore Roosevelt—Theodore, Jr., and Archibald—foresaw the nomination of Harding, who four years before had denounced their father in unmeasured terms and had held him up as an international criminal in the matter of the Panama Canal. They came to see me. Could anything be done to prevent Harding's nomination?

I suggested that they appeal to the thousands of Republicans throughout America who loved their father; that they denounce Warren G. Harding and declare that no true Rooseveltian would support him in the convention or thereafter. The two young men backed away from my proposal.

#### The Republicans Take Over

So what did I do? I, the curmudgeon—Ickes the battle-scarred? I ran my neck out and wrote my own defiance as a former warrior under the egis of Theodore Roosevelt. I signed it and threw it at the delegates in the convention. Too late. Johnson, Wood and Lowden, any one of whom would have made a better candidate and a better President than Harding, got together. The adroit Harry Daugherty, the realistic Crane and Smoot, and the dying Penrose had done their work.

And so came Harding to Washington with his Ohio gang hanging on to his shirt-

tail. But not with my help. The Lord forbid! If a curmudgeon is not true to himself, to whom then can he be true?

Then Harding dramatically died on a trip that he was taking to Alaska. Why and how he died should not be mysteries, but they are.

I broke loose from James Cox and Franklin Roosevelt in that year of 1920, and continued on the losing end; and again in 1924 with Davis. Coolidge, with his pie brigade, had no difficulty in winning both the nomination and the election. As who wouldn't have, with John W. Davis as his opponent? Davis was really the original "poor little barefoot Wall Street lawyer."

With 1928, came Al Smith. The religious issue reared its ugly head. On the Republican side, the leaders had taken the word of Coolidge that he did not choose to run, when all the time it was his eager desire to do so. Enter Hoover, who, finally, after many years and much travail, had decided that he was a Republican. Harding had put him into his Cabinet as Secretary of Commerce, and Coolidge had retained him. He had been building himself for President ever since 1918, and ten years later, he made a three-point landing.

To me, Hoover has always been—well, Hoover. I took no part in the campaign, but I did vote for Smith. I have voted

## GLOBALONEY GIRL

BY FRANK GERVASI

Clare Boothe Luce, legislator, ready to meet the exigencies of a tough day at the office

### A strictly male point of view on a controversial subject

CONGRESSWOMAN Clare Boothe Luce (R-Conn.) is thirty-nine years old and the kind of woman who admits it with the same effortless candor with which she acknowledges that she smokes. She is also the kind of woman whom most men adore and most women definitely don't. About her, women say and write things which should neither be said nor printed but invariably are.

An example of the unrestricted warfare between her and almost all other women is the threadbare anecdote about Clare's kinship to a murderer. Clare's father was William Boothe, a violinist. The oft-told

story is that, through him, Clare is distantly related to John Wilkes Booth, Abraham Lincoln's assassin. The cats would have it that Clare's folks added an "e" to their name in an effort to hide the relationship. The story is false. Clare's people came over on The Ark and the Dove, and they settled in New England and not in Maryland, whence came the ancestors of the man who shot Lincoln.

Nature endowed Clare with beauty, brains and health in precisely those proportions calculated to arouse the envious antagonism of her sex. And if nature hadn't insured trouble for her, Clare's own literary aptitude for exposing the weaknesses of the female, which she demonstrated in her play, *The Women*, would have guaranteed it.

A Republican woman worker came to Clare during the election in Fairfield

County, Connecticut, and confessed that she had been afraid to meet her after seeing the movie version of *The Women*.

"Why, you're not at all," the woman said, "like I'd imagine you." Which is about as far as most women will go in the way of compromise in their opinions concerning this cool, shapely, chic and rapier-tongued nemesis.

Those women who envy Mrs. Luce's gifts can draw comfort from her present predicament. After a dazzling career as playwright, editor, author and much-traveled if overimpressible foreign correspondent, she is currently a nobody. This is, however, a state of affairs not likely to endure for one endowed with her metabolism. I asked her about her metabolism. She said it was "perfect."

Clare is now a Congressional freshman. In big-time politics, this is just one cut

above the page boys in the House of representatives, although the Beautiful or the Candor Kid (as she has also called) has asserted herself to the extent of securing a place on the House M Affairs Committee. When the committee meets, she sits at the foot of the where she is made expertly to feel her priority.

Mrs. Luce provided proof of her pressibility in her maiden speech to an attentive House. She added a new to the war's idiom, gave the public to the possible policies of Mrs. Luce Stateswoman and opened herself to terattack from her ancient enemy women. She advocated American do tion of the air lanes after the pea opposed to freedom of the air as pro by Vice-President Wallace.

The latter's global peace plans a ternationalism, Mrs. Luce labeled "loney," which she castigated as a "w sense with a woof of nonsense." Her baloney" went 'round the world. She page one in the Republican New Herald Tribune and page 27 in the pendent-Democratic New York Tin

### The Lady Climbs Aboard

Mrs. Luce campaigned in Connecticut Fourth District under the flamboyant of "Let's fight a hard war instead of a soft war." But she didn't go to Washington with any illusions about men and politics, nor about herself or her ability to revolutionize the capital and the world. She discovered, very quickly, that better learn the ropes of the Ship of State before she attempts to do any stunts. Mrs. Luce has, however, declared her intention of running for Congress from the Fourth District again in 1944, which would indicate strongly that she's in it to stay a while.

For one who's been around and fancied herself a "journalist," she did a few prat falls—as they say in the world of the theater where Gypsy Rogers hangs her G-string. There was the mess of Clare's visit with Democratic Speaker Sam Rayburn. Mrs. Luce had to travel to Washington from Camp Pendleton where she had attended an Army production of *The Women*. Her publisher, Henry Robinson Luce, telephoned her to inform her that the Kitchell, a friend from Texas, was in Washington and to give him a ring. Clare phoned Kitchell who asked her to come to The Anchorage for cocktails with Representative Lyndon Johnson and other members of the House, including Speaker Rayburn, Ben Cohen and Tommy Corcoran.

"Sure," said Clare, "I'd like to meet my new boss."

Almost before the cab bearing Clare to The Anchorage arrived, minutes later, the story was all over Washington, in several versions. One version had Clare had sought out Speaker Rayburn and wheedled an appointment on the International Relations Committee. By the time she got to Republican Leader Joe Martin, Clare's stormy initiation into Washington politics was ensured.

If Joe Martin is a remarkable man, it isn't because he is subtle, nor because he understands women. Through intermediaries, Mr. Martin let Mrs. Luce know he was chagrined and despondent and short, very sore about what she'd done. Mr. Martin indirectly advised the new Clare that Congressional freshmen are to be seen and not heard and, if possible, even seen—and much more. But she added up to the same thing.

This laid the psychological back for Clare's next frosh boner. In other things, Mr. Martin had advised her to keep away from the press. When she arrived at Union Station from Hollywood where she had worked three weeks

(Continued on page 47)

# Belly gunner's prayer at 50 below

"Come on, baby—give!"

Strange things happen at 50° below zero. Rubber  
as brittle as glass. Oil turns to mush. *Metal*  
*shrinks.*

But when a gunner in a high-flying U. S. bomber  
presses the firing button of his gun, it must work  
manently! It does.

Steel gun springs which compensate for sudden  
changes in temperature have been developed by  
years of research in United States Steel and other  
laboratories. These springs keep delicate firing mech-  
anisms working smoothly—at 50 below or 130 above.

That's just one of the things these men of steel  
have done. They've learned how to make cans with  
only a fraction of the tin previously used, to help  
keep America's food supply flowing to our armed  
forces. Air-field runways of steel and of wire mesh  
that can be laid almost like a carpet.

## What will your life be like after the war?

The progress in steel-making born in these war  
years will build an exciting new life for you. Better  
tools will be ready to serve you in a thousand ways,  
more usefully and economically than ever.

When peace comes, the U.S.S. Label will mean  
more than ever, too . . . because it will be backed  
by scores of wartime improvements in steel which  
will make American life better.

# "I've Crossed the Ocean for Edgeworth!"

A stranger stopped me on the street and—with a Scotsman's "bur-r-r"—He said: "I beg your pardon but—perhaps you'd point out, sir—The way to a tobacconist's—I'm from a ship, you see, An' dinna know ma way around"—I said: "Sure! Come with me!"

Well, I bought a pack of Edgeworth, and I wish you'd heard his laughter. "Why Edgeworth is the verra thing," he said, "that I've come after—'Tis fine tobacco for ma pipe, but scarce abroad—no joking, I have to come 3000 miles to find such fragrant smoking."

Copr. 1943, Larus & Brother Co.

Easy to fill your pipe

Fits your pocket easily

WE sympathize with the pipe smokers in England, Scotland, Australia, Norway, Sweden, Denmark—and other foreign countries. For since the war it has been hard to get their favorite Edgeworth—the tobacco for which they used to pay 60¢ and 70¢ a pocket tin—because of the import duty.

But you are still privileged to enjoy America's Finest Pipe Tobacco for only 15¢. Edgeworth, by the way, is now packed in the new Seal-Pak pouch. It fits your pocket comfortably—and, best of all—it keeps America's Finest Pipe Tobacco in flavor-fresh condition.

Enjoy a generous sample at our expense. Write Larus & Brother Company, 203 22nd Street, Richmond, Va.

"AMERICA'S FINEST PIPE TOBACCO"

in Kiska Harbor, and scored hits on two cargo ships; and you wonder why we don't drive the Japs out of the Aleutians and get it over with. You wonder what we're waiting for. Well, the men who are flying up here—the pilots who single-handed are fighting this forgotten war—wonder that, too, sometimes. They feel that intermittent bombing raids—regular missions are impossible to schedule in the incredible Aleutian fog—will never permanently dislodge a well-entrenched enemy so near his own base of supplies. They wonder when their aerial efforts will be followed up by an all-out sea-and-land occupation of Kiska and Attu. They wonder how many planes must be lost, how many pilots must die, before the Navy and the ground forces move in to finish the job.

For it is a lonely front—the least-known and loneliest of all our far-flung battle fronts. These pilots are not fighting a glamorous war of blazing guns and gallant encounters in mid-air; they fight an unseen foe, and they fly and die alone. Their enemy is the weather. Their battlefield is a boulder-strewn beach scattered with tell-tale bits of twisted metal, or a snow-covered mountainside where the torn wing of a plane flaps emptily in the wind, or an icy strait into which a flaming bomber hisses into silence like an extinguished cigarette. They do not parachute to safety and a hero's medal; they struggle for a few minutes in the numbing water until their chute fills and drags them out of sight forever. Their citation reads, "Missing . . ."

The flying conditions in the Aleutians, winter and summer, are, beyond any argument, the worst in all the world. These Army bombers go out on missions in weather that would ground any ordinary operations. "We don't think it's too thick to fly," they say, "until you can't see your pilot." They talk matter-of-factly of hundred-mile-an-hour williwaws, or of snow squalls so sudden that a pilot may taxi up the runway in bright sunshine and find the field blanked out by the time he turns to head back for the take-off. One pilot told me of flying formation through a fog so complete that he couldn't see the plane directly ahead of him. "All I could do was to come down fifty feet off the ocean," he said, "and follow the wake made by the blast from its props on the water."

## Target for Today

The day's mission is briefed in the Pilot's Ready Quonset Hut, down near the line. Each morning, after breakfast, the combat crews zip on their fleece-lined leather flying suits and pile into a recon car and jolt down to the hut through the inky blackness of an Alaska winter morning, hoping against hope that today's weather will be okay to make the run over the target. They pack themselves in the car ten deep, sitting on one another's laps, draping themselves along the fenders, straddling the radiator, singing.

In the Ready Hut there is a large plaster-of-Paris relief map of Kiska, resting across two sawhorses. It is very popular, because Kiska Harbor is just the right size and shape to accommodate the average pilot's rear end. You rest the base of your spine on the Jap camp area at Salmon Lagoon, the heavily fortified ridges of North and South Head furnish an admirable support for either buttock, and you straddle Little Kiska Island in the harbor's mouth as you would the pommel of a saddle. The squadron commander stands beside a chart on the wall and talks in a low pleasant voice, as though he were outlining a play in football:

"We're going to about nine or ten thousand on the way out. We'll go north of the

chain, come around the Volcano to Pillar Rock, turn in toward the island here—" He indicates the spot on the chart. "—and make a ninety-degree diving turn. All flights javelin right. First element will use a 6,500 base altitude; second element 5,500. Start your bombing run about here." He points to the chart again. "First element will take the hangars, the second the sub base. Use a loose formation except against fighter opposition, in which case we'll close up as in regular tactics. Shipping in the harbor gets first priorities, of course. Remember, on your bombing run the copilot will maintain air speed, the pilot flies the ship. Rendezvous five miles north of here," putting his finger on a dot on the chart. "We'll have fighter coverage. In case a peashooter has any trouble, you, Mac"—he jabs his thumb toward a pilot, who nods silently—"will lead it back to the base. Maintain radio silence on the way out. Standard frequency. Any questions?"

"Will we have much Zero opposition?"

"I think so, yes."

"Antiaircraft?"

"The Navy communiqué will state as usual that there was no antiaircraft fire," dryly, "but look out for those gremlins." He takes out his watch. "Everybody synchronize his watch. We ought to hear about the weather in an hour or so."

The group relaxes; now there is nothing to do but wait. And wait, and wait. A cribbage game starts up, someone goes to work on a jigsaw puzzle, the men light cigarettes, loosen their flying suits, straddle chairs and read old copies of magazines, fling their leather jackets on the floor and stretch out on them and talk. They talk a

language all their own, a jargon peculiar to pilots. "I had to goose it coming in." "Boy, did I sweat it out . . ." "The I shoveled the coal to it and gunned around again . . ." Strange vivid phrases strike your ear—flying language: Back the throttles. Hang it on the prop. Plunk the tail in first. Balloon over the way. Milk up the flaps. Someone reads their last mission: "When that Zero came alongside you, Dave, did the Jap look like that one you always see in the movies, one that grabs his stomach and bends over and goes 'Ugh?'" "Six no trump." "S wonder why we can't drop a bomb down inside the crater of Kiska volcano and touch it off." "Da da da . . ." "Up," from the cribbage game, "We're ing to add." "Shouldn't it be almost to hear about the weather?"

They tell you the hard-luck story of the popular little bombardier from New York's lower East Side. It seems that Izzy won his bombardier's wings he engaged to a girl, and he went down to buy her a ring. "It costs five hundred smackers," Izzy himself interrupts eagerly, "but when I tell the jeweler I'm a bombardier, he claps me on the back and says, 'My boy, I'll knock off a hundred bucks for every bomb you drop on Germany.' Izzy sighs. "So what happens? So he's sent to Alaska."

## Mascot for a Bomber

Or they tell you about the colonel's dog. The colonel's dog is a big Siberian husky named Scoop, and whenever the colonel leads a mission, he takes Scoop in the bomber with him. Nobody is quite sure how many times Scoop has made the over the target, but the colonel leaves him back at the base. Claims it safe back at the base, with all those going by . . .

You wait, and finally the phone rings and the room is suddenly very quiet. The squadron leader picks up the phone. They know the answer by the look on his face. If his face falls, that means the mission is off again, and someone sighs softly, and they go back to their cribbage and magazines and more waiting. If his face gets very bright and tough-looking, then chairs scrape back hurriedly, zippers are yanked up, they grab brief cases, charts and pile through the door, jostling and shouting over a shoulder: "Keep it hot for me." "If anybody has to bail me out, remember to fill out your Form One." "You're a grand old flag, da da da, da." "Nobody touch that jigsaw puzzle, I'm going to finish it when I get back."

But he never finishes it; he never gets back. It was a tough mission today. Really they buzz the field when they get from a mission; but today they come quietly, one by one. The squadron leader lands his airplane first and taxis to a halt. The ground crews swarm over the ship to count the holes. There are four holes. Jack murmurs apologetically to his crew chief: "I'm afraid I didn't get your airplane much good, Sergeant."

"No, sir," with a reproachful look, "sure didn't."

Russ' plane is late landing; they have a little trouble on the way. One of the bombs jumped its shackle and hung suspended halfway through the bomb doors; the other bombs spilled out of the bay but the first bomb still dangled there. They couldn't get the doors shut again. It looked pretty bad, Russ admits. The landing of the bomb bay was so small it couldn't get through with your chute but the little tail gunner took off his hat and dangled by his hands over empty until his groping feet found support.

## THE FIRST TEN IN CONTRACT BRIDGE

1. Harry J. Fishbein
2. Mrs. Olive Peterson\*
3. Lee Hazen
4. John R. Crawford\*
5. Charles H. Goren\*
6. Richard L. Frey
- 7-8. Sigmund Dornbusch and Samuel Stayman
9. Miss Ruth Sherman
10. Mrs. A. M. Sobel, Tobias Stone and Waldemar von Zedtwitz

\*Philadelphians. All others New Yorkers

There are the top ten players of national championship bridge for the 1942-1943 season, as ranked by Shepard Barclay. Mr. Fishbein scored victories in two title events, from among the eleven contested (including the individual tournament), and gained two second places. Mrs. Peterson had two firsts and two seconds; Messrs. Hazen and Crawford two firsts and one second; the next five had two victories each; and those tied for tenth each had one triumph and two runner-up positions.

Wartime considerations prevent devoting the necessary space for a detailed review of this season.

## "WAR BONDS ROUT HITLER," SAY THE 5 CROWNS

EACH War Bond or Stamp is a thrust  
Where Hitler can't take it—but *must*!  
So let's sock away  
A tenth of our pay—  
We'll win, and the Axis will bust!

Seagram keeps the  
**TOUGHNESS OUT**  
... blends extra  
**PLEASURE IN**

ONE glance at Der Fuehrer's smug phiz  
Will show why he's getting the biz!...  
Lend War Bonds your cash—  
Help Uncle Sam smash  
The worst kind of TOUGHNESS there is!

**SLEEP ISN'T A LUXURY; IT'S A NECESSITY. DRINK SANKA AND SLEEP!**

TUNE IN . . . 5:45 P.M., New York Time, Sunday afternoon. Sanka Coffee brings you **William L. Shirer**, famous author of "Berlin Diary," in 15 minutes of news over the Columbia Network.

he balanced himself somehow, and inched down, and managed to release the bomb.

Mac's plane is the last to land. One tire has been punctured by flak, but the ship wobbles safely to a halt; and Mac sticks his head out of the cockpit. "Bombardier's dead," he announces briefly. You wonder fleetingly whether Izzy's girl will ever know now about that five-hundred-dollar ring.

You stroll back to the hospital with Mac. There is a raw hole in his hand, and he wraps it with his handkerchief as he walks. "Shrapnel," he shrugs; "probably a piece of that Sixth Avenue El we sold 'em." You suppose that when Mac got the metal in his hand, he took some of the sulfa pills which every plane carries for such an emergency. Mac looks a little embarrassed at your question.

"As a matter of fact," he admits, "I didn't know how bad off Izzy was, and I figured the airplane was pretty well stove up, and we might have to make a forced landing somewhere, and there were only a few pills, and I thought he might need 'em . . ."

They're not heroes. Don't call them heroes; they don't want that. They're not Intrepid Birdmen, or Rover Boys of the Air, or Supermen; they're ordinary guys doing a job, getting cold and miserable and lonely and not liking it any better than you would. Heroes are glamorous, heroes don't have wet feet, heroes never get lonely. Over and over the pilots used to ask me, "When you write about us, don't make us out heroes," and I used to wonder why; but maybe that's why. Maybe they felt that if they were heroes, the folks back home would put them up on a pedestal, and leave them there and forget them.

They do a lot of thinking while they're lying around. They lie on their cots and talk, or listen to the radio, or smoke; incidentally, they do not drink much. There was a bottle of Scotch in our Quonset when I arrived; it was still untouched when I left. You see, these men up here are too busy fighting a war to think about liquor. You wish the same thing could be said for the dry politicians.

## Thoughts for the Home Front

But they think about other things, lying around the Quonset of an afternoon after the mission is called off: lack of vital materials for our defense plants at home, for instance, and labor leaders who order strikes while pilots up here are dying because they haven't enough planes, and defense workers who take off a couple of days to sober up after pay day, and contractors who chisel the government for higher profits, and Congressmen who promote sectional interests, and citizens who complain about the ban on pleasure driving, or taxes, or meatless Tuesdays. (Did you ever eat Vienna sausage seven days a week?) When you see a bomber burst into flames over Kiska Harbor, when you see a kid with his face blown full of shrapnel, when you see a shaving brush and a girl's picture and some cigarettes gathering dust on a shelf beside a cot that won't be slept in again; then problems like war profits, or overtime, or gas rationing, or one pat of butter seem unimportant, somehow. Perhaps they would seem less important to the absentee defense workers, or selfish farm-bloc leaders, or business-as-usual businessmen, or politics-as-usual politicians, if they could eat and sleep and live with these kids in the Aleutians, and feel the dampness and loneliness and miserable cold, and look forward to a bombing mission over the target as a welcome relief from the waiting and waiting . . .

Oh, yes. About our tree. We had it on Christmas Eve. The men went out behind the camp and gathered armloads of brown-green tundra moss, and they fastened it together with baling wire in the shape of a tree. They sprinkled shavings from a bar

of soap for artificial snow; and for Christmas-tree decorations they hung some empty 50-caliber shells they found on the floor of a bomber that had returned from a mission over the target, and they made cornucopias out of the red paper backs, film packs, and filled them with pieces of compressed chocolate and sea biscuit from an emergency ration kit. They fashioned a Star of Bethlehem for the top of the tree, by folding a red cellophane gas-mask cover; and someone produced a truly magnificent bell by cutting up a red-and-green tobacco tin and hanging a 30-caliber mortar-piercing shell inside it for a clapper. An enlisted man from Carolina, a gunner with a medium bomber crew, balanced precariously on the back of a chair in his thick-soled leather boots and suspended the bell from the mess-hall ceiling. "Twelve the night before Kiska," he murmured thoughtfully.

## Merry Christmas in Alaska

The long narrow Quonset hut was crowded; the men on the mess tables along the benches and on the floor with their shoulders propped against the knees of the row behind them: shaggy, unshaven boots leaking little pools of black water onto the muddy floor. Most of them were youngsters from the South; they had never seen snow before. The blond, nervous chaplain was trying to be a cheerful Mr. and he kept urging everyone to sing Christmas carols he had typed. "All right, fellows, 'Hark! the Herald Angels Sing' and let's all hear it." They draped their arms around one another's bulky shoulders, and sang in the deep drawl of Texas and the twang of New England and the slow, slack syllables of Alabama. "Little Town of Bethlehem." What do you say, now, fellows?" A couple of officers at the back of the hall joined in softly. The husky mess cook, stripped to the waist, wiped dough from his forearms and strolled over toward the group. Then the chaplain held up his hand, and explained about the presents. There hadn't been a mail, you see, and so there were no packages to put under the tree, no gifts from home, no candy, no cigars; but—his glass winked—they'd managed to dig up a few little things at the PX, only of course they weren't enough to go round, so each man had been given a number, and now the chaplain was going to draw some number out of a hat, and if anybody had a lucky number . . . "Bingo!" someone concluded "Merry Christmas."

It didn't take long; there weren't many numbers. Number 27 was a box of matches; the winner walked back sheepishly through a gantlet of envious eyes. Number 145 was a bar of chocolate; tentmates fell on it and devoured it on the spot. Number 13 opened his present and displayed it glumly. "No woman for a thousand miles," he muttered, "so what I get? An address book!" I remember a towheaded kid from Tennessee, in overalls, size dungarees and heavy G.I. shoes, sitting alone at a table at the end of the hall. He had a letter from his mother. He'd received it on October 14th, and he'd reread it so many times that it had finally come apart at the folds. He was rearranging the pieces intently on the table before him. He was going to read it again on Christmas Eve . . .

We didn't have any turkeys or puddings for Christmas dinner; there had been no boats. Our menu consisted of bean soup; lukewarm stewed tomatoes; boiled potatoes which had been frozen and which we didn't eat; bread, with butter; and Vienna sausage. But I was eating with the combat crews, I was sitting elbow to elbow with these men in leather flying suits who are fighting our forgo war up here; and it was the best Christmas dinner I ever had in my life.

# *Maybe you think an army truck isn't spectacular*

**S**URE, the tanks, planes, jeeps, and PT's are headline performers in the theatre of war—but how about the swift, powerful giant that can carry 42 men and a jeep on its back, and haul a 50-foot loaded trailer at the same time—or lug a 155 mm. cannon up mountain grades.

Prime movers they call them, and the Army uses them for nearly every heavy hauling job under the sun.

Endless caravans of supply trucks bring up the thousands of tons of food, water, fuel, and ammunition while bombs and shells try to blast them from the road.

Hundreds of thousands of Army trucks—4-wheelers, 6-wheelers—must be built.

To keep them rolling, millions of replacement parts for engine and chassis must be made, systematically identified, and carefully packaged for world-wide distribution in the face of every conceivable military and climatic hazard.

That's only one job faced by Thompson workers.

Let us hope we prove as dependable, under whatever tough going may lie ahead, as the Army truck.

# DOUBLE, DOUBLE, TOIL AND TROUBLE

By Lion Feuchtwanger

ILLUSTRATED BY RONALD McLEOD

Oscar sat under a livid spotlight; nothing could be seen but his face. But was this his face? The dark eyes beneath the thick eyebrows were more intense, the forehead beneath the luxuriant hair was broader, the nose bolder

## The Story Thus Far:

DURING World War I, Alois Pranner, a magician, and Oscar Lautensack, who poses as a mind reader and clairvoyant, entertain soldiers in Germany—far from the combat areas. Years later—in 1931—the two men are living in Munich. Oscar is desperately poor. He is, therefore, delighted when his brother, Hannsjörg (a murderer who has just been released from prison) shows him the way to riches and power. Hannsjörg ("Hans") is a Nazi. First he sees to it that Oscar meets Hitler. Then, observing that the Fuehrer admires his brother, he proposes that Oscar go to Berlin and win the friendship of the Baroness von Trettnow, an influential Nazi.

Oscar welcomes the suggestion. Accompanied by Pranner, he goes to Berlin. There, his air of mystery, his strong personality, the bunk that he spouts impress the baroness; and within a short time they are close friends.

Oscar's clairvoyance and his mind reading astound the Berliners whom he meets. Soon—after he has become the editor of "Germany's Star," a magazine devoted to racial studies and occultism—he is receiving invitations to parties given by Hitler's satellites. Twice, when he is the guest of the wealthy Kadereits—Dr. Fritz Kadereit and his wife, Ilse, who are backing the Nazis financially—he meets and talks with the Fuehrer, who obviously admires the "great clairvoyant."

Oscar has a secretary—a man. But he feels the need of a woman—sympathetic, understanding, willing to be dominated—to take down his "greatest" thoughts. And he finds one—Käthe Severin, a public stenographer who shares a small flat with her half-brother, Dr. Paul Cramer, a half-Jew who hates the Nazis. For a time, Käthe dislikes Oscar; but gradually she finds herself admiring him in spite of herself.

Next, Oscar decides to demonstrate in public how great he really is. He tells Hans that he is going to astound Berlin by raising a naval hero—one Brittling—from the dead (he has photographs of Brittling and records of his voice). He says that he wants to make a prophecy—something that is sure to "come true."

Hans then tells him a political secret—Hindenburg will soon have a new minister of war, who will lift the ban on the National Socialist Party's private army! Oscar says quietly that his "inner voice" had already told him about the new minister! Hans is stunned by the fellow's effrontery. "You really are something," he says. "Yes, we Lautensack brothers, we're a pair."

## IV

OSCAR, spotlighted on the platform, felt no stage fright. On the contrary, he drew strength and a feeling of happiness from the breath of the crowd that rose up to him from below.

His cheerful assurance at once made the audience surrender. He amused himself and the public most outrageously with the hypnotic experiments. When Oscar invited members of the audience to volunteer as subjects for the hypnotic experiments, Alderman Reitberger—on his wife's urging—at once stepped forward. He was known as a jolly old boy and was always ready for a joke. Fat and comfortable, the alderman seated himself in the chair; he was quickly put to sleep. Oscar suggested to him that it was hot, very hot. Alderman Reitberger became deeply flushed with the heat, puffed, wiped off the sweat. Oscar suggested to him that he was on the way to the baths at Wannsee. Now they were at Wannsee. Alderman Reitberger undressed, stood there in his underwear, while the public howled, screamed, squealed with delight. Now he was about to step into the water, into the orchestra pit. At the last moment Oscar held him back. In stupefaction the alderman dressed again, in stupefaction he went back to his wife; and soon afterward they made their way out.

Not for a moment did it occur to Oscar that his jokes might be too cheap. Instead, he was elated by the feeling of having power over people, of savoring their weaknesses, their credulity, their delight in obeying. He used that delight, played with it. He got the feel of his audience. They were pliant; he had them in the palm of his hand.

Without hesitation they followed him as he made his transition to a more serious mood. A moment before they had laughed, chortled, held their sides; now they sat there in suspense, the way he

wanted them, with serious faces. When he told them, he had received frequent visitations from Captain Brittling, the dead Brittling, the naval hero. To be up to now this had only happened once. Oscar had been alone, or at most in a small circle. So he did not know what the dead man would be willing to take out of him to such a large assembly. On the other hand, Oscar felt that here, in the hall, people were full of good will, earnestly striving for illumination; perhaps the dead man had something to tell the people. He would try to summon him. He asked that no one down in the audience put up any resistance to him; that they wait without skepticism. "Please, do not offer me any resistance," he begged. "Please relax."

Now he was no longer the cheerful, former of a moment ago. A small, round table was placed in front of him and a crystal pyramid and a wreath of white beads. He sat under a livid spotlight. Nothing could be seen but his face. But was this his face? The dark blue eyes beneath the thick eyebrows were more intense, the forehead beneath the luxuriant hair was broader, the nose bolder. And now his face with its somber brilliance grew more taut, the skin became taut, the pupils contracted, the eyelids drew back. With concentration Oscar stared at the top of the pyramid. Even the most skeptical could hardly think the stony, marble Roman head ridiculous. Just before they had been shown before with direct, open openness how amazingly simple it was to produce the "supernatural" by special means, just because before, Oscar Lautensack had behaved so amusingly and with such vulgar prankishness, the audience were now willing to believe in his sincerity, in the miracle which he promised them.

Oscar himself had completely lost the feeling of playing a studied part. Though he had carefully thought out and arranged every detail beforehand, he waited for the dead man to take possession of him, to use him as an instrument of speech. He became one with the awestruck, anxiously waiting public. The twilight which filled the hall became for him the twilight of the other world; inwardly he heard wild music of the phantom ship from Flying Dutchman, and on that wild music he sailed into the realm of shadows. He felt an inner tumult; the audience felt an inner tumult; the excitement of the performance on the stage infected them, and they infected him; they coalesced like a man and his worker and his believers. And now the eyes of the man on the stage lost their exaggerated life, as his face slackened—as they had seen it happen to those whom he had put to sleep a while before—all felt with him: Now he's no longer of our world, now he's on the other side, he "sees." Now, any moment now the dead man will be here.

From the breast of a woman came a sigh of eager expectation; it seemed to come from everyone's breast.

"Present!" a voice suddenly announced from the stage. A moment before, Oscar Lautensack had spoken to them in a voice that was beautiful, a rich tenor, pliant, caressing; but this was a hoarse, military voice, used to command. At the sound of that voice, anyone who had ever seen a picture of Captain Brittling, one of the nation's great naval figures, now saw it clearly and clearly.

There was an oppressive silence in the dark auditorium. Then, the audience being invited to put a question, a man stepped up; and well rehearsed, in a constrained voice, he asked: "What will the nearest future bring for the new Germany?"

"Well, now," answered the rough, hoarse military voice on the stage, "there's an angel of peace, you know, who wants to take our weapons away from us."

(Continued on page 56)

**NOW YOU SEE IT.** Before the camouflage experts went to work, this factory—a model, for test purposes—was photographed from the air on conventional panchromatic film. The bomber's eye would see what you see—a perfect set-up for destruction.

**NOW YOU DON'T.** With camouflage materials—false structures, netting, cloth streamers, paint, and artificial trees—the experts have fooled the camera, and the bombardier. To the aerial camera loaded with panchromatic film, even the marks of erosion on the slope by the railroad track have disappeared.

## Kodak Infrared Film spots the “make believe” of enemy camouflage

**CAMOUFLAGE** is the highly developed art of pulling the wool over an enemy's eyes... an art which is finding old methods ineffectual, in this war.

This is in a measure due to Kodak's development of a type of film whose vision goes far beyond that of the human eye.

Natural grass and foliage contain chlorophyll—Nature's coloring matter. Camouflage materials lack this living substance. Chlorophyll reflects invisible infrared light rays—and Kodak Infrared Film registers this invisible light, making the natural areas look light in the picture—almost white. In violent contrast, the “dead” camouflaged areas show up dark—almost black—in the picture.

Moreover, Infrared Film is able to penetrate through the haze of a “low-visibility” day, and return from a reconnaissance flight with pictures in clear detail. Here again it far exceeds the power of the human eye.

Working with our Army and Navy flyers and technicians, Kodak has carried this new technique of camouflage detection to high efficiency—and has, for our own use, helped develop camouflage which defies detection... Eastman Kodak Company, Rochester, N. Y.

**BUT HERE IT IS AGAIN.** With Kodak Infrared Film in the aerial cameras, pictures like this are brought back from an observation flight. On Infrared pictures, the false, “dead” camouflage materials look almost black. The natural landscape is unnaturally light. A trained cameraman, with one look, knows where the bombs should strike.

Serving human progress through Photography

# CONSOLIDATED

# No Spot on Earth is more than 60 Hours from your Local Airport

LONG with all that's being said and written about the kind of world we'll be living in after the war, here's one fact you cannot ignore:

No spot on earth today, however distant, is more than 60 hours' flying time from your local airport!"

A Liberator bomber, built in San Diego, were loaded and shipped the 9240 miles to Algiers by sea, it would arrive about a month later.

A Liberator is capable of flying the 6210-mile air route from San Diego to Algiers in about 11 hours' flying time.

If you doubt it, ask the pilots and crews who are flying today's big long-range planes, carrying military personnel and supplies to the far-flung battle fronts. They'll tell you that the Atlantic is only 400 minutes wide—that Australia and San Francisco are a mere

35 hours' flying time apart—that you can hop from the U.S., touch Brazil's hump, and come down in Africa, all in 27 hours' flying time.

Or look at one of the new "aviation geography" maps, like those our children are studying in school. These maps make obsolete the maps we have always known. They show us the world as it really is. In this world, because of the plane, Main Street runs from your home town to London, Moscow, and Chungking. Nations and people we once thought remote are now merely hours and minutes away.

From El Paso, Texas, to San Antonio, Texas, is 617 miles—an 18-hour trip by train.

The Airline Route from New York to London is 3480 miles—a 17-hour flight.

Today, of course, the global skyways are reserved for war. But after the war, when freedom of the air returns, trade and travel by plane will become as much a part of everyday life as the use of cars, trucks, busses, railroads, and ocean liners. It is no dream of the future to count on global transportation in giant planes which fly almost with the speed of sound itself. Even today, such planes are being designed.

The Air Age has come, sooner than we thought. Already we have had to learn that wars must be won with the aid of the new Air-Age geography—not in spite of it. And we are beginning to see that the peace we win must be built on a clear understanding of this new global geography and how it can work for us.

## AIR-AGE TIMETABLE

FROM	TO	AIRLINE MILES	HOURS
New York	Berlin	3960	20
Chicago	Singapore	9365	47
New York	Capetown	7801	39
San Francisco	Wellington	6759	34
Washington	Moscow	4883	24
London	Rome	887	4½
New York	London	3460	17
London	Berlin	574	3

The tens of thousands of men and women who make up the U.S. aircraft industry believe that America must be supreme in the air—to win the war today, to win the peace tomorrow.

They know that air power alone will not win the war. But they find it difficult to imagine a nation which possesses the finest planes, and the most planes, going down to defeat.

## Consolidated Aircraft Corporation

San Diego, California • Fort Worth, Texas  
Tucson, Arizona • New Orleans, Louisiana  
Member, Aircraft War Production Council

## QUICK FACTS FOR AIR-MINDED READERS

The famed Liberator (B-24) is a Consolidated bomber, built by mass-production methods, on moving assembly lines, at the huge Consolidated plant in San Diego and Fort Worth. The two Consolidated heavy patrol bombers known as the Coronado and Catalina also are built at San Diego.

The 4-engine Liberator Express, transport version of the Liberator bomber, is built at the Consoli-

dated plant in Fort Worth, Texas. This giant plane, with its trans-oceanic flying range and multi-ton cargo capacity, is daily shuttling military supplies to our global battle fronts.

"... today we are flying as much lend-lease material into China as ever traversed the Burma Road, flying it over mountains 17,000 feet high, flying blind through sleet and snow." From the President's address to Congress, Jan. 7, 1943.

Consolidated designed and perfected the Liberator, which is also being built, today, by Ford and North American. Consolidated Catalina patrol bombers are also built in the United States by the Naval Aircraft factory at Philadelphia and in Canada by the Canadian Vickers Ltd. and Boeing.

Major General "Jimmy" Doolittle was the first American aviator ever to take off, fly, and land "blind". He did it in 1929, piloting a Consolidated training plane known as the NY-2 Husky.

At the Consolidated plant in San Diego, there are testing laboratories in which the temperature is maintained at 80 degrees below zero.

One of the test pilots on Consolidated's staff has to his credit over 20,225 hours in the air. His total flying time equals more than 852 full days, or two and one third years.

# Concerning A Woman of Sin

Continued from page 11

ruined by these royal extravagances is due to a single factor out of their control.

The popularity of the movies has become almost equal to that of sex. And as in the case of the latter enterprise, no amount of extravagance, disappointment or mismanagement seems able to impair the success of the studio product.

Such a situation has enabled the agent to mature from a menial who originally looked up telephone numbers to a power who thinks in them.

Yet nobody in Hollywood, least of all the movie artists whose incomes he has tripled, has ever a happy word for this magician. The industry regards him as a combination beggar and pirate who divides his time between harassing the Pharaohs for alms when they have no need of him and scuttling their studios when they have. And his clients are inclined to think of him as a Quisling bent on selling them out to the bosses and solely responsible for their decline in public favor.

Burdened by these calumnies, with a status wavering between that of a white slaver and a crooked senator, the Great Agent has nonetheless found a certain sweetness in his toil. For today he is richer than any one of his illustrious clients. He, too, is one of the conquerors of Hollywood, albeit a minor one. And the Pharaohs themselves, though they howl behind his back that he is a parasite and a highwayman, must greet him with the hand of royal fellowship.

**ORLANDO HIGGENS**, who is the villain of my story, has been my Hollywood agent for seventeen years. His depredations as my representative have been, however, modest ones. It was as Daisy Marcher's agent that Orlando succeeded in almost wrecking Hollywood. And, as Orlando himself says, if that be villainy, make the most of it.

Whatever other achievements I may have in Hollywood, Orlando is my true bid for fame. It was I who started him as an agent. He was originally a tall, scatterbrained and explosive financier, at least financier was what he called himself when I first met him in his twenty-fourth year.

His claim to the title of financier was a little premature for at that time Orlando's ship had not only not come in, it had not, apparently, even been launched. He had firmly turned his back on all the careers open to young men newly out of college, declaring that he was out after "a million or two," and didn't want to be tied down by any grubby tasks.

"Lots of rich men," Orlando conceded, "have wasted a lot of time by starting from the bottom. Pretty dull way to start, I think. If I ever started at the bottom, I'd stay there. It saps your vitality."

At the time of these pronouncements, the youthful financier was without any visible means of support.

We were sitting in my house one evening seventeen years ago discussing a trip around the world on a chartered yacht that Orlando had planned—to involve twenty-five congenial souls at \$10,000 apiece, which would nicely cover all expenses including his own salary as financier. Somehow during this discussion Orlando stole an unpublished manuscript of mine from my desk. Five days later he wired me from Hollywood asking me to wire him back immediately \$1,500 as his ten per cent of its sale money. He had disposed of my manuscript (a foul one) to a movie studio. This was Orlando's first taste of porch climbing.

How it befell that my friend, whose chief characteristics were an inability to tell the truth on any subject, an evasiveness worthy of a bank embezzler and a child-

like abhorrence of all toil—how it befell that so giddy and incompetent a character could rise to the heights of Orlando Higgens, Inc., is a matter I will skip. For like most Hollywood facts, the rise of Orlando Higgens belongs more to the field of magic than biography. I give you merely Orlando in all his grandeur just as mythology gave us Minerva who jumped fully dressed out of Jupiter's head. To cap the mystery, I will add that seventeen years of huge deals and masterly manipulations had in no way changed my friend. He was as incompetent, evasive and irresponsible a character as head of Orlando Higgens, Inc., as he had been in his lowlier days. Apparently his inability to remember anything—an inability bordering on amnesia—his habit of lying about everything to everybody and his chronic state of confusion were the very talents that had brought him success. These and possibly the fact that he was one of the nicest men I have ever known. . . .

I was sitting in Orlando's office on one of those glaring Hollywood afternoons when everything including your own soul seems made out of shiny new stucco, when the telephone rang and Orlando's fourth secretary (there were six in all) informed him that a Miss Daisy Marcher wished to speak to him.

"Who the devil is Daisy Marcher?" Orlando inquired peevishly.

"She's an author," the secretary said.

"For heaven's sake!" Orlando yelled, "do I have to talk to every half-witted author who calls up. Tell her I'm busy."

**HE HUNG** up and beamed at me. "You used to like authors," I said, "before they made you rich."

"Before they drove me crazy," said Orlando. "I loved 'em, seventeen years ago. But I swear to you the way I feel now about authors I can't read a book any more. I know them too well. Talk about hams!" He shuddered. "Authors are worse than boy sopranos."

The phone rang. There were five differently colored instruments on Orlando's fifteen-foot Italian antique desk and each had a different ring. After seven years Or-

lando was still unable to tell which ring belonged to which phone. He picked up two at a time and called out in a clipped efficient voice, "Hello. Who is it?"

"Mr. Sylvester for Mr. Higgens," Secretary Number Two answered on one of the phones. Orlando winked at me.

"This is going to be fun," he whispered. "That fathead!"

"Hello, Syl," he chuckled into the phone, "nothing doing at Fox. Nope. No dice. . . . Yep. I'll hop right on it. Okay. Goo'by. Right . . . Goo'by. What's that? No, Zanuck read it personally and thinks it stinks. . . . Yep. Will do. Goo'by."

**ORLANDO** hung up and cackled happily as he always did when any of his clients were in despair.

"I can't sell that big know-it-all for peanuts," he grinned. "Did you read that last book of his? It turned my stomach."

"What's happened to Sylvester?" I asked. "He was pretty hot a while ago."

keep bothering me. I told you to tell I'm busy."

"We've told her that seven times," Secretary Five. "I've hung up on her self three times in succession and keeps calling right back and asking speak to you, as if nothing had happened."

"What do you know?" An admiral light came into Orlando's eyes. "A huh?"

"I'm afraid so," said the secretary.

"Put her on," said Orlando.

"Is this Mr. Higgens?" a purring voice inquired.

"Yes, this is he," said Orlando.

"This is Daisy Marcher," the voice continued. "I would have called you sooner but I have been ill with a fever. I could not get out of bed. Today is first day up."

"Is that so?" Orlando beamed. "How do you feel now, Miss Marcher?"

"Oh, I feel all right now," said Marcher, "as long as I keep my muffler around my neck."

"Well, thanks for letting me know about your health," Orlando chuckled. "Anything else on your mind?"

"Oh, yes," said Miss Marcher. "I'm getting very impatient to know if you have sold my motion-picture drama. That's why I called."

Orlando winked at me and whispered "Some foreigner—probably a Hindu."

"What is the name of the drama?" spoke into the phone.

"It is called A Woman of Sin," Marcher said.

**ORLANDO** winced. "Let you know tomorrow how it's coming along," he said.

"You've had it already two weeks," said Miss Marcher, "and I can't understand why it should take so long to sell."

"Oh, is it that good?" Orlando asked.

"Yes indeed," said Miss Marcher. "Consider it the best motion-picture drama that has ever been written."

"You don't say," Orlando purred. "Well, when you get your strength back drop in and we'll have a drink."

"Thank you very much," said Miss Marcher, "but I don't drink—ever."

"What, a great author like you does drink! I can't believe it!" Orlando chuckled. "I bet you're soused to the gills right now."

"I think you are a horrid man," said the gentle voice, "an utterly nasty man and I am sorry I selected you to be my agent."

There was a bang. Miss Marcher hung up. Orlando sat glaring at the instrument. Miss Betha Flannigan entered and walked to her desk in the corner. As Secretary Number One, Miss Flannigan shared the Higgens sanctum.

"What do you mean by letting half-witted like that send us scripts?" Orlando demanded of her. "Did you hear that title A Woman of Sin! Are we sending out just like that?"

The round-faced Miss Flannigan, who had no idea of what Mr. Higgens was talking, answered soothingly:

"I'll have it checked right away."

"Fire that manuscript right back at her as fast as you can," Orlando growled. "A Woman of Sin. It turns your stomach—just the title."

"I'll double-check," said Miss Flannigan firmly.

A phone rang.

"That's your private phone," said Miss Flannigan.

Orlando paled. Only his current sweet hearts and his most important clients were permitted to call on this number. Any one of them meant trouble. He picked up the instrument and spoke guiltily into it.

"Well, he ain't hot now," said Orlando with a snort.

One of the phones rang.

"Did I tell you Chick is in the conference room?" Orlando continued. "He moved in two days ago with a case of Scotch. Great fella." He looked proudly at the leather-paneled door of the conference room and chuckled.

"I thought Chick was directing the Dietrich picture," I said.

"He is," Orlando beamed. "But he said he hit a snag and is going to drink himself out of it. Nobody knows where he is, so don't say a word." A larkish light filled Orlando's eyes and he murmured in an awed voice, "It's costing Empire a mint of money. If they don't find him by tomorrow they may even have to call the picture off."

I picked up the ringing telephone.

"Miss Daisy Marcher wishes to speak to Mr. Higgens," said Secretary Five.

"It's Daisy again," I said.

Orlando's face reddened and he seized the instrument.

"What's this all about?" he demanded. "I've got five secretaries" (he had six) "to see that I'm not disturbed. So they all

HAVOLINE AND TEXACO MOTOR OILS

ello. A voice rumbled back. "Right," Orlando answered with a snap. "Will do. p. Immediately. Yep. Is that so? Will take care of it right away." He hung up with relief. "That was Chick," he said. "I thought he was in the conference room," said. "He?" Orlando stood up, glaring at the leather-paneled door. "He called from the phone. He says he's dying and I should get a doctor. Come on, let's go to lunch." "Shall I send for a doctor?" Miss Flannigan asked. "Certainly not," Orlando said. "And I'll stay out for lunch so long because I'm mixed up when you're away."

At four o'clock when we returned, we decided to spend the rest of the day in Orlando's office divan, it being the only place in town. Orlando entered the office with a businesslike, "What's up, Miss Flannigan." "Chick Howser has left," she said. "I'm disappointed at the leather-paneled door. It was open." "Paramount," Miss Flannigan continued, "and they want you to call him immediately. Mr. Zanuck says to call you at 2 A. M. in his office. And he called."

"Freddie Blue, eh?" said Orlando with a frown. "H'mm. No likee." "Freddie Blue was part of Jerome B. Hierarchy. There were several figures in the throne of the Pharaoh. Freddie was Shock Troops."

"Freddie Blue," said Orlando. "Somebody probably found out about him camping here. Am I going to be howled out? How did he sound, Freddie?"

"He's a great guy," said the secretary. "He's a great guy now."

"Orlando chirped heartily, 'How's the world's greatest lagoon? . . . Never mind, I've heard of it. . . Fine. Great. Listen, how's the hearts' game tonight? . . . Okey-dokey. Tomorrow's a date. . . What's new, Orlando? What's that?' Orlando's eyes widened. 'You don't say! Glad to hear it. She's a great girl. Brilliant. We're handling Daisy. Been keeping her covered for months, sort of coach. Yep! Right. Get hold of her immediately. Call you right back. . . Yep. . . Goo'bye.'"

"What do you know about that?" Orlando blankly and turned to Miss Flannigan.

nigan. "Get hold of that half-wit what's her name—that Hindu or whatever she is."

"Daisy Marcher?" Miss Flannigan suggested.

"That's right," said Orlando. "I'm kind of stunned. Empire is buying A Woman of Sin. Can you beat that?"

Miss Flannigan spoke into her private phone, an ordinary black one.

"Have Mr. Horowitz contact Daisy Marcher right away," she said. "Mr. Higgins wants to speak to her personally. It's important."

I didn't know as I dozed off on the divan that one of the greatest calamities ever to threaten Hollywood had been officially launched. . . .

Orlando arrived at my hotel shortly after midnight. I was just leaving my room. The producer of the picture on which I was working had decided we needed a new ending. He was waiting in the studio for me with the director, and my presence there was a matter of life and death, he insisted.

"Forget about Walter," said Orlando when I started to explain. "I'm in a pickle. In fact, I've been going crazy all day."

We started out of the hotel together.

"I can't find that half-wit Daisy Marcher," said Orlando. "I've called seven hundred people. Nobody ever heard of her. And Empire's gone nuts about A Woman of Sin. Stark, raving nuts. Freddie Blue's been hounding me to close the deal. And Mike Devlin's been hounding me, too."

I was impressed. Mike Devlin was Mr. Cobb's royal right hand. He had in his youth gone nine rounds with Jack Johnson, and then retired from the ring and cast his lot with the motion-picture industry, beginning as a physical culture trainer. How so honest and so humanly worthy a character as Mike Devlin had ever climbed the shenanigan heights of Hollywood was always a mystery to me. It may have been with his fists.

"I'd like to read that script," I said. "So would I," said Orlando. "There isn't a copy in the office. It got sent over to Empire by mistake. Some bumble-head put the wrong script in an envelope. I'm going to fire half the staff tomorrow. You can't run a business that way."

"A fascinating situation," I said, "genius rising above the handicaps of an agent."

"Genius, my eye!" Orlando snorted. "J. B. Cobb's gone crazy—that's all there is to it."

"What's he got to do with it?" I asked.

"He read it," Orlando said. "That's part

of the whole mistake. Once you start a mistake it keeps on. That script got on his desk somehow." He chuckled. "The title must have attracted him."

The thought of Mr. Cobb reading a manuscript was truly astonishing. Mr. Cobb never read manuscripts or concerned himself with any of the details of movie-making. It was his function to preserve a fresh, unused mind so as to be able to harass all the nobles under him when they did wrong. Nobody could harass Mr. Cobb for the reason that he never did anything. And there was no questioning his genius because he was getting constantly richer and more powerful.

"He read it," Orlando repeated, "and it went to his head like a shot of hop. I'm betting that script is pure drivel."

Jerome B. Cobb was standing on the curb outside the hotel waiting for his palanquin. Two viziers were in attendance. Mr. Cobb looked at me coldly but his heavy face lighted at the sight of Orlando Higgins.

"I want to talk to you, my boy," he smiled.

The two viziers immediately hailed Orlando with shouts of camaraderie.

"You have done a lot of things I haven't approved of," the Pharaoh began in measured tones, "such as selling me material which was nothing but low-grade rubbish. And holding me up for it."

"Oh, come now, J. B.," Orlando protested. "In the first place I didn't sell it to you. I sold it to Empire."

"I am Empire," Mr. Cobb quivered and then controlled himself. "Now please don't interrupt me because I am going to say something of importance to you. I consider that you have finally redeemed yourself in my eyes by sending us this new story."

"A Woman of Sin," Orlando murmured.

"I will be frank with you," said Mr. Cobb. "I read the story myself, busy though I am. And I'm glad I did. Because it might have slipped by us. My boy, I consider that story not only a great masterpiece but one of the greatest pieces of box-office entertainment we will ever make. I'm going to shoot it without a single change and I am going to make it an all-star production."

"I'm glad you like the script," Orlando purred.

"Like it!" Mr. Cobb raised his voice to a shout. "I'm crazy about it! It's what this country needs—a great sex story." The Pharaoh turned a stony face suddenly on Orlando.

"I want that deal closed by tomorrow at ten," he said, "and if you try any Orlando Higgins tricks with any other studios, I'll ruin you. I'm telling you openly and aboveboard."

"WHAT are you talking about?" Orlando said peevishly. "I would have closed the deal today except for that fool writer."

"What writer?" Mr. Cobb demanded darkly. His thought was unused to delving this low in the movie business.

"Daisy Marcher," said Orlando.

"What's the matter with her?" asked Mr. Cobb.

"She's asking too much money," said Orlando. "And I simply don't want to stick Empire. It's bad business for me in the long run, J. B. I've been arguing my head off with her."

"How much does she want?" Mr. Cobb asked coldly.

"It's preposterous," Orlando feinted, "but I can't budge her."

"How much?" Mr. Cobb shouted.

"Seventy-five thousand dollars," said Orlando in a contrite voice. "And frankly, J. B., I don't think that script is worth it. No script is."

"It's a deal," said Mr. Cobb quietly. He turned to one of the viziers. "Get Blue on the phone immediately and tell him that

seventy-five thousands dollars is the price we will pay for A Woman of Sin."

He held out his hand to Orlando.

"We'll shake hands on it like old friends," Mr. Cobb said, "and remember we got witnesses."

ORLANDO'S phantom bonanza fascinated me and I hurried to his office as soon as I could get off the set on which our new ending was being shot. It was noon. I found the three outer Higgins salons in turmoil. Phones were ringing and voices barking in all corners.

Orlando was pacing in his sanctum, his coat off, his suspenders moist and a gleam on his face.

"I haven't slept a wink," he greeted me.

"Find her?" I asked.

"No. I sicked a detective agency on her at seven this morning," he grinned.

"How about the Screen Writers' Guild?" I suggested.

"Those fatheads," Orlando sneered. "They never heard of her. I've been tracking her down from every angle. She's a myth, that's all."

"How about telling Freddie Blue the truth?" I said.

Orlando laughed contemptuously.

"For one thing they'd never believe me," he said. "They'd think I was trying to pull something crooked. Besides," he added, "I haven't got her signed up yet."

"Mr. Cobb on the phone," Miss Flannigan announced. "The green one."

"Hello, J. B.," Orlando began quickly. "Listen, I've been talking to Miss Marcher half the night like a Dutch uncle. But I can't get her to see it our way. . . . Yep. Yep. . . . Nope. . . . Nope. . . . Listen, J. B., she absolutely refuses to sign any contract that doesn't give her a percentage of the gross over and above the seventy-five grand. . . . Yep. Right." Orlando raised his voice to a righteous scream. "I told her it was absolute lunacy," he cried, "and that I thought she was behaving like an absolute stinker."

His wrath subsided as he listened to Mr. Cobb's bellows. When he spoke again it was in a sad voice. "That's exactly what I've been begging her to do, J. B.," he cooed, "go over and talk it out with you. And that you were the fairest man in Hollywood. But she spit in my eye and told me to go to the devil and we both almost lost her. . . . Nope. Nope. Listen, J. B., all I know is that she just simply won't go see anybody connected with a studio. She hates movie executives or something. It must be some kind of a curious quirk."

Orlando listened with a suffering expression. Then he spoke again. "J. B., honestly I'm going nuts with this," he said. "These writers drive you crazy. . . . What? How much? Now wait a minute, J. B. I can't stick you like that. I'll try my best to get it for the seventy-five grand like we agreed and shook hands on. Yep. Right. I'll tell her. Will do. Call you back."

ORLANDO listened with a suffering expression. Then he spoke again. "J. B., honestly I'm going nuts with this," he said. "These writers drive you crazy. . . . What? How much? Now wait a minute, J. B. I can't stick you like that. I'll try my best to get it for the seventy-five grand like we agreed and shook hands on. Yep. Right. I'll tell her. Will do. Call you back."

ORLANDO hung up the instrument and sat looking moodily at a Picasso on the wall.

"This crazy business really exhausts you," he said and added thoughtfully after a breather. "He offers one hundred thousand and will go higher."

"How long can you keep this up?" I asked.

"Frankly, I don't know." A grin brightened Orlando's face. "But I've got an idea! Flannigan, get me Freddie Blue." He sat humming and staring at me with a larkish beam. "You know, this is a very interesting situation," he said.

"Mr. Blue is on the red phone," Miss Flannigan announced.

"Freddie," Orlando cried. "Listen, honey boy, you've got to help me. Yep. I've talked to J. B. But I want you to do this for him and me both. I want Empire to put out a story that they're buying A

Woman of Sin. . . . I know it's against the rules but it's our only hope. If that silly fathead Marcher sees her name in the papers, it'll soften her up. . . . No, use psychology, Freddie—it won't make her worse! I tell you I know her like a book. She's fame-hungry. It'll show her you people are sincere. . . . Okay. Thanks. That's a pal. Right. Yep. Absolutely. Call you back."

Orlando hung up and beamed.

"That'll smoke her out," he said. "Come on, let's go swimming. It's hot as hades." He turned to Miss Flannigan. "You know where to find me if that hambo Marcher turns up."

"This is a great town," said Orlando happily, as we drove to the beach, "the only place left where a fella can use his wits."

THE movie columns the next morning carried enfevered accounts of Empire's new project—the production of the screen drama A Woman of Sin, considered by Mr. Cobb the greatest study of human emotions ever attempted by the cinema. The picture was going to be blessed with an all-star cast. At the tail end of the publicity stories which recounted mainly the brilliance of Jerome B. Cobb as a master showman was a single line identifying the author of the screen drama as a newcomer named Daisy Marcher. This was an unusual break for Orlando, for it is rarely that a writer, unless he is adept at blowing his own horn, figures in the symphony of adulation that cinema critics offer to the industry.

I reached the Higgins office at two o'clock. Orlando was having lunch at his desk.

"Kind of exciting, eh?" he greeted me.

"Daisy turned up yet?" I asked.

"Nope," Orlando chewed thoughtfully on his food. "I've got a theory she's dropped dead somewhere."

"Mr. Cobb is on the phone," said Miss Flannigan, "the blue one."

"Tell him I'm in conference with Miss Marcher," said Orlando. He resumed his thoughtful chewing.

"What makes you think Daisy dropped dead?" I asked.

"Drink," said Orlando. "She was drunk as a coot when she called me. You remember. And she said she's been laid up with a cold. Well, you take a lush like that and give her influenza, and they never recover. Flannigan, get me all the obituary columns for the last four days. I want to look them over." Orlando beamed at me. "That's irony, isn't it?" he chuckled. "To end up in a drunkard's grave, with fame and fortune as your pallbearers. Real irony. Make a great movie."

Orlando kept on chewing. The phone rang.

"Miss Daisy Marcher to see you," Flannigan announced and her voice dropped a little of its coolness.

Orlando turned and stared at her. "No kiddin'," he said softly. "Who's she?"

"In the waiting room with Mr. Witz," said Miss Flannigan.

"Have her come right in—and be she's alone," Orlando ordered. "It's her out, just as I figured it would. I all hams, drunk or sober."

He had no more than finished this ment when the door started opening three of us looked expectantly. It's to open rather mysteriously.

"Come in, come right in," Orlando called in a saccharine voice.

A child with blond hair falling on shoulders appeared. It was an unusual small child. It wore a very short dress from which its long bare legs protruded. On the top of its head sat a large hair ribbon. The tot regarded with a pair of frowning and unwavering eyes.

"What do you want?" Orlando peevishly.

"I'm Miss Marcher," said the child in a slightly awed voice.

"Well, tell your mother to come you wait outside like a good little Orlando smiled winningly. But his were jangled. Turning to his secret added, "Flannigan, can't I have this run the way I want to? How many secretaries do I need?"

"I have no mother," said the little tot. "I am an orphan." She looked her solemnly and inquired, "Which you is Mr. Orlando Higgins?"

"I am Mr. Higgins," said Orlando slowly. "Why?"

"Is that so?" said the child. "Oh oh, dear—that's too bad."

"It is, eh?" said Orlando testily.

"Yes, it is, indeed," said the child tones had now become firmer. "Because don't think I'm going to like you."

"Why not?" I asked, always into in character analysis of Orlando.

The little visitor flashed a smile. "Because he has red-rimmed eyes," said, "and an insincere look."

ORLANDO was staring with his open. Repartee failed him.

"So you're Daisy Marcher?" he finally.

The child nodded.

"Well, that's very interesting." Orlando leered at the tot. "And I suppose also the author of A Woman of Sin."

"Yes, I am," said the child. "In am."

"You're nuts!" Orlando exploded leaped to his feet. "Do you know

# Cadillac

## The roar of its guns announced it !

THE CADILLAC-BUILT M-5 tank was truly a secret weapon." Cadillac engineers and craftsmen, in cooperation with U. S. Army Ordnance engineers, created it behind sealed doors—and built it in quantities long before word was revealed concerning it.

When it sped into action on the North African front, it was a complete surprise to the bewildered Axis forces.

Even yet we cannot reveal details for they

include innovations wholly new in tank warfare. We want the enemy to learn the hard way—not through any facts divulged by us.

We can tell you, though, that the British call the M-5 the "Honey"—while the American boys say it is exactly the type of weapon they would expect from Cadillac. And we can tell you, too, that these tanks are going out to the battlefronts in gratifying numbers—and have been doing so for many months.

Tank production is but a part of Cadillac's work for the War and Navy Departments. We are also an important manufacturer of many precision parts for a famous airplane engine—and we have been since the day this engine went into volume production.

Our war production requires by far the greatest effort in our entire history. But we are pleased to tell you that we have kept our schedules on every assignment made to us.

happens to little girls who tell lies—dirty, rotten lies?"

Daisy sniffed.

"Oh, don't be silly," she said. "I can't bear silly men."

"Good Lord!" Orlando cried. "What is this? Is this a gag or something? This is the damndest, most idiotic thing that ever happened!"

"I wouldn't swear in front of the child," Miss Flannigan said.

"You keep out of this," Orlando roared.

"Oh, I don't mind at all," Daisy's gentle voice stopped him. "I am used to profanity. People always swear at me."

"I'll betcha," said Orlando witheringly.

"Especially if they got red-rimmed eyes," said Daisy.

Orlando pulled himself together.

"Listen," he said haughtily, "I am not in the habit of quarreling with babies."

He walked around the table and, lifting Daisy to its top, stood looking fiercely into her eyes.

"What I want to know is," he continued coldly, "are you actually the author of A Woman of Sin. Cross your heart and hope to die."

Daisy solemnly crossed her heart and answered, "Hope to die. Yes, I am."

"Yes you are what?" Orlando was not to be taken in by half oaths.

"I am the author of A Woman of Sin," said Daisy, "hope to die."

There was a hush in the office. Miss Flannigan tittered. No one spoke. The little visitor remained on the table top swinging her legs and fluttering her eyelids. She seemed very happy now. Orlando broke the silence.

"That hair ribbon is what kills me," he said hoarsely. "Take it off."

"What for?" Daisy asked.

"It gets me nervous," said Orlando.

"Oh, but it makes me look taller," Daisy smiled. "My mother gave it to me."

"Oh," Orlando snapped. "I thought you said you didn't have a mother."

"On her deathbed," said Daisy demurely, "when I was a little girl."

"Listen," Orlando's voice was firm and he seized the tot by her pipestem arms, "I want the truth. About everything. You're an orphan, eh?"

"Yes," said Daisy. "My father ran away with another woman who afterward stabbed him to death in a saloon brawl. And my mother hanged herself because of a broken heart."

"I thought you said she died in bed," Orlando snarled.

"Oh, yes," Daisy agreed. "They cut her down and she lingered because her neck hadn't been broken. Only twisted."

THE child swung her legs over the table edge and sighed, "I've been through a lot."

"Never mind about that," said Orlando peevishly, "where do you live?"

"Oh, in the hills," Daisy waved a little hand. "I like the wilderness."

"I suppose you live in the hills all alone," Orlando sneered, "like a hermit."

"Not altogether," said Daisy. "Because my grandmother is there."

"Now we're getting somewhere," Orlando beamed at me. "What's your grandmother's name and what's the address?"

Daisy frowned and was silent.

"You're just wasting my time," Orlando cried. "Where does your grandmother live?"

"It wouldn't do you much good to meet her," said Daisy softly.

"Why not?" Orlando demanded.

"Because she's an Indian," said Daisy, "and like most Indians she doesn't care to talk very much. She goes for a whole year sometimes without saying a single word. Her name is Minnetonka. And she's very old. A hundred and ten, I think, anyway. So you see it's *you* who will be wasting your time talking to her."

Orlando listened spellbound.

"Jee-rusalem!" he cried. "You're the worst liar I ever met!"

The child started climbing breathlessly down from the table.

"How dare you!" she cried, "after crossed my heart and hoped to die and everything, and now you call me a liar!"

"Shut up or I'll spank you!" Orlando face was red.

"Why of all the nasty men I ever met, Daisy screamed and started for the door."

"No, you don't!" Orlando grabbed her. "Come on, Flannigan. We're taking the brat home and finding out the truth about her if I have to skin her alive."

WE LEARNED a number of things in the next hour.

Daisy Marcher lived in a modest apartment over a grocery store with a stout and amazingly coy mother who had never hanged herself. Daisy's critical sense had apparently invented the hanging. There was no grandmother and there were no Indians. Daisy's father, whose picture was shown us, had been a Methodist clergyman until he succumbed to pneumonia during her teething period. The mother an expert knitter (she knitted calmly during the entire conference) had supported herself and her precocious baby by supplying several local knitting goods counts with a steady line of sweaters and socks. The mother's name was Lillian Egelhofer. Daisy Marcher was a nom de plume. The child was nine years old and had always been called Mildred. There was no question of the authenticity of A Woman of Sin. Mrs. Egelhofer had seen her child put the story down page by page and had not added or removed a word—only corrected the spelling.

"The child will simply not learn a spell," the mother explained with a martyric sigh, "although I've told her it would be a great help to her career. Haven't darling?"

"Oh, Mother! For heaven's sake!" said little Mildred, doubling up as if with cramp.

Mrs. Egelhofer fed herself a large chocolate cream out of a half-emptied bowl and settled her billowy figure more comfortably into the chair.

"Sugar deficiency," she explained in sad voice. "The doctor says I must wait out for it." She munched the chocolate cream like a Spartan. "Well," she resumed her needles flying, "those are all the faces I can think of about little Mildred. Unless you care to have me tell you about her aura. I'm very susceptible to auras and have made quite a study of them. He changes from a delicate yellow to a sort of magenta."

Little Mildred made a noise in the back of her throat like a tiger on the flanks of a bullock.

"Come here, darling," said Mrs. Egelhofer, "and let me fix your hair ribbon. These gentlemen will think you're a little street Arab."

"Mother!" Daisy exploded. "This is too much!" Her little face could not do justice to the look of murder in her eyes.

"Why, babykins," Mrs. Egelhofer extended a plump hand full of knitting needles, "where are your manners?" She looked at her child with a reproving but tender smile and in her distraction connected with another chocolate cream.

"Stop it! Stop it! Stop it!" Daisy cried through clenched teeth and threw herself face downward on the couch. It appeared for the moment that the child had burst into tears. But this was erroneous. Daisy wasn't crying. She was biting the cushion under her face.

"An uncontrollable temper," said Mrs. Egelhofer. "Her father, you know, was just like that. Dark purple, most of the time. I always felt that it was his aura that killed him. Not pneumonia at all."

"Flannigan," said Orlando watching the child tearing the pillow with her teeth.

"Daisy into the other room. She's only disturbing her mother."

"Oh, thank you," said Mrs. Egelhofer, "but I'm used to her."

She bit into the medicinal chocolate cream.

"I want to talk business," Orlando said confidentially.

Isis sat up.

"Oh, no, you don't," she cried. "Oh, I should say not. I don't leave my mother alone with you. You'll cheat her."

"What the gentleman says," Mrs. Egelhofer smiled archly at her little girl.

"Oh, on, get out!" Orlando stood up and moved his neck.

"Don't strike her," said Mrs. Egelhofer faintly.

"I'm not going to strike her," said Orlando peevishly. "I'm going to take her and throw her into that other room—from here."

Isis got to her feet and looked up at him thoughtfully. . . . Then holding her high she walked proudly and slowly out of the room.

"Get in there with her, Flannigan," Orlando ordered, "and keep the door bolted."

"She needs a firm hand," Mrs. Egelhofer said and continued her knitting. "Wouldn't you be kind enough to bring me a glass of water? These scenes are really bad for me. My heart, you know." She smiled at the door.

ETCHED the water. Orlando outlined his plan. It was very simple. It involved neither giving him power of attorney nor himself and the guardianship of Mildred Egelhofer alias Daisy Marcher for one year. In return she would receive \$2000 minus the ten per cent commission. Orlando paused a moment and added that there would be another ten per cent reduction to cover the expenses of the baby's keep. Mrs. Egelhofer continued knitting calmly.

"Oh, I don't know, really, if it will do any good," she sighed, "you know I've loved so hard."

"It will be roughly a hundred thousand dollars," said Orlando soothingly, "after the necessary deductions."

Mrs. Egelhofer nodded. There seemed a little difference to her between \$100,000 and \$125,000.

"Oh, I'm not thinking of that," she said. "I'm just worrying about little Mildred. After all, she's my first concern. And all the money going to her. It may spoil her character entirely. She's so simple and unassuming now."

"The money is not going to her," Orlando said firmly. "It's going to you. It's your money to do what you want with. It would be criminal to hand over that money to a crack-brained infant like that."

"Poor babykins," Mrs. Egelhofer sighed, "I hate to deprive her of it. But I'll be able to do so much for her. After all, she needs an older head."

"Done and done," Orlando snapped and then explained the second phase of the situation. This was the need for complete secrecy. No one must find out that a child of nine was the author of *A Woman of Sin*.

"You see it's this way," Orlando said candidly. "Empire is going to sink two million dollars into this picture. Maybe more before they're through. And they're going to advertise it as the most sophisticated sex drama ever filmed. That's the angle they bought it on. In fact"—a hysterical light came into Orlando's eyes for a moment—"Mr. Cobb himself told me he considered it the most penetrating study of human passions ever attempted on the screen."

Mrs. Egelhofer nodded over her knitting with motherly pride.

"And if it was found out," continued Orlando, "that a child of nine—a mere baby—had written it, it would not only ruin Empire but give the whole movie industry a black eye. Oh, boy!" he added, and looked mistily out of the window.

"Oh, yes, I know," said Mrs. Egelhofer. "The public is very fickle."

"That's right," said Orlando. "In putting over this deal for you I'm taking a terrific gamble. Do you know, for instance, what would happen to me if Empire found out about her?" He pointed to the bolted door. "I'd be lynched. I mean it. Lynched!"

Orlando drew a deep breath and went on brightly. "The only way to avoid that sort of thing is to have Daisy put in my charge. I'll provide a fine home for her—and keep her locked in it—till after the picture is released. Of course, you can come to visit her whenever you want."

"Well," said Mrs. Egelhofer with a sigh, "I've got a bad back." She groaned by way of illustration. "It's very difficult for me to get around."

"You mean you won't let her go?" Orlando demanded.

"Oh, no," Mrs. Egelhofer sighed again, "you can have Mildred. I wouldn't think of standing in her way. And I know you'll be sweet to her. But couldn't we arrange it so that if the child gets lonely for her mother you can bring her to me at the seashore? You see, I want to go away and

BREEZE TURNS PROPELLER (A), CAUSING COGS (B) TO UNWIND STRING (C), WHICH LOWERS RABBIT (D) - GREYHOUNDS (E) CHASE RABBIT AND PULL CAR ON ROD (F) - USE GAS ONLY WHEN RABBIT GETS TIRED - FIND EXTRA RABBITS IN REAR TRUNK (G).

..OR, IF THAT'S TOO MUCH TROUBLE.. JUST SOUND YOUR Z FOR

**PENNZOIL**

### Don't Let Your Uncle Down!

If we're going to win this war, it's even more important to save your car and tires than to save gas. Here are a few ways you can save your car for Uncle Sam:

Steer around holes and bumps that may break a tire carcass. If you can't avoid them, slow down.

Probably 3 out of 4 shock absorbers are ineffective for lack of attention. Poor "shocks" let wheels spin and grind off rubber.

### EVERY CAR HAS "FORGOTTEN" PARTS!

As the miles pile up on your car, hidden parts that can go thousands of miles with little service need attention. Learn what they are, what they need—FREE. Write for "How to Keep Your Car Alive," a 16-page booklet packed with unusual facts. Address The Pennzoil Company, Dept. AC., Oil City, Pa.

**OIL IS AMMUNITION—USE IT WISELY!**

**GIVES YOUR ENGINE AN EXTRA MARGIN OF SAFETY**

### PUT ALL YOUR GAS TO WORK!

Fouled spark plugs, sticking piston rings and valves waste gas 3 ways. Warped valves, worn pistons and burned-out bearings often follow.

Engines kept free from sludge and varnish stay efficient. With PennZoil, you get the oil made especially to keep your engine clean and easy on gas.

"To think that I saved only the heads of these animals!"

LEO GAREL

try to recover. I've been through a lot, you know."

"Will do," Orlando snapped. "It's a deal!"

He walked to the bedroom door.

"Okay, Flannigan," he called, "you can let her out."

The door opened. Daisy was sitting in a large chair with her nude legs thrust rigidly in front of her.

"I heard every word you said," she announced.

"That's a lie," said Miss Flannigan, "we couldn't hear a thing."

"You couldn't," Daisy sneered, "but I heard him cheating my mother, plain as anything. You threatened her with a gun and said you would blow her brains out. I heard you. You said she must choose between death—and something worse."

Daisy paused to get her breath. Orlando stood looking at her admiringly.

"I notice you don't deny it!" the child cried.

"I not only threatened your mother," said Orlando, "I shot her three times through the temple. She will never knit again. Come on, we're going," he added happily. "Never mind taking any of her clothes along. We don't want her looking like a circus freak."

Daisy stood up.

"Am I going with you?" she asked softly, ignoring the insult.

"Yep," said Orlando.

The child dropped to her hands and knees and removed a pile of confession magazines from under the bed.

"Let's hurry up," she said.

**T**HERE were a score of telephone messages waiting in the office, most of them from Jerome B. Cobb.

"Get J. B.," Orlando ordered, "and then lock her up in the conference room. Go on, baby," he beamed on the authoress.

"I don't have to go home any more?" Daisy asked slowly.

"Not for a whole year," said Orlando.

With a cry of joy the child went skipping after Miss Flannigan.

"I want you to be a witness to this conversation," Orlando grinned at me as he held the phone. "You'd better take notes. Because it may be very important—afterward."

"Hello, J. B.," he said heartily into the instrument. "Well, it's in the bag. All settled. Yep... Yep... Nope. No royalties. I put it over for you. I had to practically blackmail her. Just a hundred and twenty-five thousand flat, payable on signing the contract."

There was a slight rumble over the wire.

"Can't help it, J. B.," Orlando spoke up

firmly, "she won't consider taking it in three payments. And, by the way, I'm signing the contracts for her. She's given me power of attorney."

There was a larger rumble over the wire.

"Listen," said Orlando, "I can't perform miracles. She simply refuses to see you or any other movie executives. Even talk to them on the phone. It's got something to do with psychoanalysis. . . . Oh, didn't I tell you before? She's going to one. She's suffering from some kind of a shock, I guess. . . . Yep. Yep. That's what makes her a genius."

Orlando listened and yeped happily for several minutes.

"That's fine," he resumed. "And now that you've agreed on the deal and everything's settled I want to go on record with something, J. B. And please don't interrupt me. I want to say frankly to you that I've read that script and I think it's pure rubbish. Worst I ever sold you. It could only have been written by a half-wit or some child of nine."

Orlando listened to Mr. Cobb's shout with a happy smile.

"I'm not trying to double cross you, J. B.," he resumed. "I'm just trying to be honest, for once in my life."

The Cobb roars crackled out of the instrument.

"All right, I'm crazy," Orlando agreed cheerily. "But I just want to go on record that in my opinion A Woman of Sin is a piece of unadulterated childish rubbish and should never be made by a grown-up company."

Orlando jerked his ear from the receiver and sat staring blandly at the instrument as it threatened to explode in his hand.

"Okay," he resumed in a contrite voice, "maybe I'm wrong. No, I don't pretend to know as much as you, J. B. And if I haven't convinced you that only a child could have written that script, I'm willing to take your money. No, I'm not against your making great pictures. . . . No, J. B., I gotta be honest, it didn't make me cry when I read it. . . . It did, eh? How about Mike Devlin, did he cry, too? Is that so? Well, maybe I'm wrong. . . . Listen, I'm an agent, not a genius."

His voice grew crisp: "Yep. Tomorrow morning at ten. Bring all the contracts over. Yep. Okeydoke. Ten o'clock. Be there. Right. Will do! Call you back."

Orlando hung up the phone and leaning back in his chair laughed until the tears came from his eyes.

"The picture of Jerome B. Cobb crying over that brat's script is worth anything that happens," he said. "Gosh, I love this town."

(To be concluded next week)

## ONE FLASH OF IT

By Dorothee Carousso

ILLUSTRATED BY WENDELL KLING

**A soldier learns that the things that give a man peace can also go with him to war**

EVERY Saturday night the busses came into the terminal from the Army camp, noisy and khaki-filled. Letty stood behind the bright-lit luncheon counter and watched the soldiers burst out of the busses and scatter through the white-hot light of the terminal to the friendly shadows of the streets of Altonville. Few of them stopped now for coffee or a sandwich. They would stop later at her counter—later, when they straggled in by half-dozens or dozens, sleepy, their eyes dull, their voices ringing sharply against the cold walls of the deserted terminal.

Letty thought: You can tell after a while just about how long they've been in. You've watched so many of them grow.

You could tell the rookies, the pale strain around the mouth, the nervous lips and hollow cheeks, and the terrible wide bewilderment in their eyes. Their smiles were too quick, half courage, half resignation . . . it tore a fellow to pieces but there was no help for it; there was a war to win and no going back to an old way of life until it was won.

Letty did not see much of the fellows when their basic training was really under way. They did not come to town much then. When they did come, they brought their own fog with them. They stood

around on street corners and outside the windows of stores where the darkness hid them. They didn't drink then. They were too bewildered to drink, too tired to reason.

They stood alone in darkness, and then, when it was time to return to camp, they moved their feet and stood on line and boarded the bus to camp, swearing angrily all the way back. It was a little taste of hell, every muscle cursing with pain, and every nerve sending off a red mist of agony, and a careless word from a guy who beefed called down the whole jittery barracks on his head, and everyone was sore at everyone else for a couple of days. It was no way to live. It was the way to become a soldier.

They learned then, and when they stopped at Letty's counter their eyes were hard and cold, their voices quiet and firm. For some of them, it was growing up. For some of them, it was growing old. And for some, like the big dark one with the black, glittering eyes, it was some mad assurance that nothing could touch the depths of his heart again.

There was something good about that bright recklessness; it made a good soldier in a tight spot. Letty knew that the big dark one would make just that, driven into the thick of it by the bravery born of fear, to win and escape, or to win and die, all the same in the shocked dumbness of his heart.

He got drunk a lot in town after the basic training was over and he was put down on the airfield to do refueling while

waiting for his application for the Flying Cadets to go through. He got drunk, in fact, every time he came into Altonville. Not noisy, not boisterous, never vulgar. Just a lovely, silly edge that made him laugh at odd things and got everyone around him laughing, not quite sure of what they were laughing at. He was a strange fellow, in some ways like all the soldiers in the world, in some ways like no one Letty had ever known.

HE WOULD blow into the terminal about midnight and order coffee and a Western sandwich, and tell Letty that he had met a fat girl with green eyes who insisted that he liked tall thin dogs and only tall thin dogs. Then he would laugh like crazy and Letty would laugh with him, not quite knowing whether he was drunk or crazy or a little of both.

He usually came in with a gang, and Letty would hear them coming a long way off, laughing with and at that goofy guy, and Letty would start to smile even before they heaved in sight, knowing that he would have some crazy story to tell her before he waved good night and swung up the bus steps.

Letty knew a lot about him; knew that his name was Garret Ives, that he liked Western sandwiches and coffee, that he was from New York and had been an editor of a detective story magazine; that he had a married brother whom he loved and admired, whose clever letters he carried with him everywhere and read aloud, he said, to drunken Irish tenors, and bored

bus drivers, and streetwalkers, and bers and ministers.

He had, Letty knew, an expensive watch and a full wallet, and the bag he carried when he went home on furlough was downright swank. Money. Letty's heart sank because she liked him so much, and money was one thing the Army could not change in a man.

They had known each other about three months. He called her Letty and she called him Proivet Oives, kidding him because he was from New York. He knew nothing at all about her. She was Letty at the luncheon counter in the bus terminal, a small girl with brown hair and gray eyes and a smile that you looked for when you thought of something funny.

Then, one night at the counter they were all talking about death to a short soldier named "Butch," who insisted he was not going to die and never find out who won the war and what they did to the world after they got it.

Garret Ives gave Butch a whack on the back, struck a dramatic pose, and quoted Omar:

*"And this I know: whether the one I love is kind to love, or Wrath-consumed quite . . ."*

Letty, pouring coffee from the big silver urn, finished it aloud, laughing softly, cause all charming drunks quoted Omar. *"One Flash of It within the Tavern can be Better than in the Temple lost outright."*

When Letty put Garret's coffee down in front of him, he was staring up into

# THREE *Battle-Tested* PLANES -Each a Leader in its Field

**B-25 MITCHELL BOMBER.** With a history of smashing successes over the Axis in daring bombing raids on all major fronts—including Major General James H. Doolittle's raid on Tokyo—B-25 Mitchell bombers soon join the United States Navy as the PBJ-1. "No airplane in its class in friendly or enemy forces is known to equal it," says OWI (Office of War Information) in a report on U. S. plane performance.

**P-51 MUSTANG FIGHTER.** The first fighter plane designed entirely on basis of combat experience. It has distinguished itself in low altitude fighting—strafting raids over Europe—in slashing at enemy troops, in blasting railroad trains, radio stations and factories. American and British flyers call it "the best fighter plane of 1943."

**AT-6 TEXAN ADVANCED TRAINER** (formerly the Harvard). The most widely used combat trainer in all the world. Twenty-four nations have chosen the Texan for its sturdiness, its ease of maintenance, and its versatility in helping prepare young pilots for the bigger tasks ahead.

Each North American plane now rolling off the line is a "battle-tested" plane—a better design than it was a year ago—a month ago—a week ago. That's because we at North American refuse to "freeze" design. Whenever battle experience and American engineering genius suggest an improvement, the brains and energy of thousands of North American men and women employees go to work *right now* to make those needed changes—to send these improved planes to our boys faster—where they will do the most good. That's why, in aviation,

"We should get the signal from Washington any moment"

COLLIER'S

VIRGIL

face, those bright, black, glittering eyes intent upon her. And Letty saw something in him that moment that was real. Not the soldier with the cold eyes and the quiet voice. Not the reckless Proivet Oives with the wonderful silly edge that made everyone laugh. There was no war in that moment; just a man and a girl who saw in each other a reality that had been born in peace, and remembered it.

**B**ACK at camp, Garret wrote to his brother, "I met a waitress who quotes Omar Khayyám . . ."

"Drunk again," his brother answered, "and hiding behind Omar's tent."

"Drunk as usual," Garret wrote back. "There's nothing else to do, and bored to death waiting until I know enough to go out and get my head blown off. Her name is Letty and she is majoring in science at the university here. She is going to be a chemist in another six months. This is a wonderful country. I go out to battle, so girls like Letty can study chemistry all day and sling hash all night, and then mix smoky substances for a few years until she finds some broken-down yokel that even the Army won't take, who will give her a home and nine sons to start another National League with when this mess is over."

"Is that supposed to be clever?" Letty said angrily when he told her about it.

"Not especially. But true."

They were walking through Memorial Park on Letty's night off. The stars were few and smoky, and a lazy wind rolled the leaves over and over along the narrow path. They came to a bench and Letty sat down and Garret sat down beside her and folded his hands between his knees.

"In my home town, which is Mavis," Letty said crossly, "there are some mighty nice men. They're not broken-down yokels that the Army won't have. The Army has them all."

"Don't tell me there's 'a boy back home?'" Garret grinned.

"There's no one," Letty said.

They were quiet for a long time. Then Garret said: "Well . . . there was a girl back home . . . if you can say that a girl is 'back home' in Greenwich Village. It was going to be quite a marriage. I broke it up."

"Why?"

"Because the bugles were blowing, my good woman. And when the bugles blow, a man doesn't belong to love and respectability. He belongs to dust and mud and heat and cold and blood and death. What could we have of a marriage now? And the future is a complete blank."

Letty leaned back and closed her eyes. What would a girl back home in Greenwich Village be like? Dark and pretty

with all the bright sort of words at command. New York made girls that way. When you came from a little town called Mavis, and worked your way through a science major at a small university, you were different. You thought things deeply, with hope, with hurt. It was when you lost out on your chance for a career, it was final, and the fear of life out lived with you every minute like a poison to attack.

"And did she agree with you about that?" Letty asked in a low voice.

"She saw the point," he said abruptly.

The hurt in his words struck her like a blow and with swift intuition she put together all the odd unfitted pieces. That boy's recklessness which assured him that nothing could ever touch him again. The things he laughed at and made others laugh at. The dark brooding of his eyes when he sat alone at the counter, where there was no one to laugh with. This was the real Garret.

He moved restlessly on the bench beside her. He had asked her out tonight, knowing that he should not, knowing that it was only loneliness and the fact that she was pretty and laughed at his jokes. He was interested, too, in any girl who wanted to study science enough to sling hash and a bunch of wisecracking khakis six nights a week. But he knew this was not the kind of girl he should ask out. Not this girl with the soft gray eyes like a velvet gown, eyes that belonged with firelight and a grant tea and gentle, earnest conversation. That was why he had told her about himself so quickly. He had not told the others; not the one in the dance hall who wore much cheap lilac perfume . . . not the one with the green eyes who insisted that he liked tall thin dogs and only tall thin dogs . . . but the little waitress who quoted quatrains from the Rubáiyát, who had small clean hands, and something in her face remembered of peace and loveliness.

**H**E GOT up from the park bench and pulled her up and tucked her arm through his. "You wanted to walk," he reminded her.

They walked along through Memorial Park, through Altonville, watching the smoky stars and the leaves that fell whispering beneath their feet. They stopped at a bar with soft golden lights and mellow sweet juke music where, to Garret's surprise, she ordered Scotch and soda. He said it was a clean drink, whatever it meant.

Then Garret took her home to a quiet-looking boardinghouse with a high ceiling and broken-down cement gateposts.

Letty put her hand on his arm and thanked him for the evening. He thanked

he for coming, laughing to himself at the quaint formality. She did not turn away then and go through the broken-down gateposts behind the high hedge. She stood quietly, her hand still resting on his arm, while he wondered if he should kiss her good night.

"She'll wait for you, though, won't she?" he asked him.

"Oh... Helen?"

"Yes... Helen."

He laughed a little at the question, evaded it with another:

"Wouldn't that be rather silly?"

"Why silly?"

"I might not come back. It might be yes. Or I might come back..."

"Dripped?" she suggested.

"That's the idea."

He looked up into his face, and even in the darkness he could see the light gray of her eyes and the glinting of her clean brown wind-blown hair.

"You want the future on a golden platter, you two!" she said angrily.

"Well, we want a future, anyhow."

"If I loved a man," Letty told him, "if I loved you, I'd wait forever. If I loved you, I'd take the chance against any odds."

His eyes were in shadow but she saw the straight hard line of his mouth relax in a smile. He took her chin in his hand and kissed her full on the mouth.

"Thanks for the plug, Letty," he said.

HE TURNED and walked away, disappearing quickly down the shadowy path. Letty stood with her hand on the post and felt the warmth of his lips lingering in memory. The words of her thoughts tumbled after him like blown leaves.

Because when you love a man, you love him whether he has one leg or two, whether he's across the ocean or walking along the street with you... whether he's alive or dead. Don't think you can forget a person who walks right into you, right into you, and is a part of you and is always a part of you as long as you live."

He went through the gateposts then, behind the tall hedge, and into the quiet, dark, carpeted house that smelled of milk and lemon oil and lamb stew. She

turned on the light in her room and saw her worn-out bedroom slippers in front of the rocker and her textbooks open on the table and the narrow bed that was hard and flat.

She sat down on the edge of the bed and looked at herself in the dresser mirror and told herself that she was a fool.

BUT he asked her out again the following week. He asked her at the last moment, while the bus driver was hollering at him that this was the last bus for camp.

"I have this Sunday off," she told him.

"Sunday, then. I'll call at the house for you."

She hated to have him call at Mrs. Rodgers' boardinghouse in the daytime. It was shabby enough in the darkness, but in the bleak light of a cloudy autumn Sunday, it looked like a house that no young person should live in. There was something about its unpainted, weather-beaten ugliness that gave it a hopeless air. It was an ugly frame for a young girl, and Letty hated to have Garret see her in it. Yet she felt it was worse to meet him at some random street corner. At least Mrs. Rodgers had a bell to ring and a parlor to wait in, and people who had enough interest in Letty to peek into the parlor and see what her soldier boy looked like.

Coming down the stairs, seeing the crowd of boarders scatter discreetly, Letty thought: I'm poor and he may as well know it. I'm not going to break my heart trying to impress him.

Garret was sitting on the edge of a parlor chair talking to Mrs. Rodgers, looking bewildered and amused. Mrs. Rodgers was a dear little puttering old lady, slightly cracked in the upper story. Letty thought enough of her to put an arm around her thin shoulders and present Garret to her with drawing-room formality. It was nice of Garret to be so gallant about it. He made the little old lady's eyes shine with the dear memory of more graceful days than these, and she took his arm to see them off at the door.

"Letty will show you the garden, Captain Ives," she said, completely ignoring the fact that Garret was a private, and that the garden was nothing to see on a cloudy

WAXIDE

CLEANS... WAXES... POLISHES... ALL AT ONCE

November afternoon. "You will excuse me, I'm sure, but the cold troubles my shoulder. Neuritis, you know."

When the door closed behind them, Letty walked across the porch and stood on the top step, her back to Garret.

"She'd show you the garden herself," she said, "if it wasn't for the fact that she doesn't own a decent-looking coat."

"You didn't *have* to tell me that!" he answered in deep cold anger. "And you don't have to show me the garden, either."

"She'll be watching from the window, and her feelings will be hurt. It's all she has to offer in the way of entertainment."

He followed her straight narrow back down the stairs and across the gravel walk to the withered garden. There were a few shabby chrysanthemums, hanging head down in the frost, and one late zinnia wilted drunkenly on its stem.

"There was a rose," Letty said, leaning down and lifting the brown bud for him to see. It was a pink rose that had not had its chance to bloom before the frost came, and looking down at it he saw old Mrs. Rodgers and her house and her nondescript boarders. He saw Letty standing there in the withered garden under the dark gray sky, miserable with shame, not looking at him, only the proud set of her chin daring him to say one wrong word.

He reached for her cold hand suddenly and held it tight in his own as though in this way he might keep her always the one young rose in this awful scene of withering. Letty looked up at him and began to smile, and suddenly they were both laughing at crazy old Mrs. Rodgers and her rickety house and her faded brown garden. They went on out through the broken-down gateposts and stepped gaily down the street.

The bars were warm and cozy-looking, but Letty said it was too early in the day for a drink. They turned toward Memorial Park but when they had walked around the park twice, it began to rain, a mean cold rain that slashed at their faces and soaked their shoulders. They stopped walking and turned to look at each other.

"Well, where do we go from here?" Garret grinned.

"At this point, I should say let's go home and have waffles and tea," Letty said uncertainly. "But home is a hundred-odd miles away. I don't think we can make it."

"Why not?" he said with sudden inspiration. "I'm on a three-day furlough."

Letty stared at him. "And you didn't go home?"

"No," he mocked her with an evasive laugh, "I didn't go home!"

"Helen..." she started to say.

"You were inviting me for waffles and tea," he reminded her.

"Yes..." she said, still staring at him absently. Then her eyes began to light up with mischief. "I'll get a bad cold standing out here in the rain. I'll be sick in bed for a couple of days!"

"At least!" He took her arm and they started down the path, running to the taxi stand at the park gates.

"The bus terminal," Garret told the grinning driver.

"Oh, we'd better not!" Letty protested. "The boss will see me. We can pick up the Mavis bus out at Five Corners."

AT FIVE CORNERS, the bus was just pulling out as they came up in a sluice of mud, but the taxi driver, honking madly, shot ahead of the bus and stopped it by cutting it off. The bus driver and the taxi driver hurled friendly, hair-raising epithets at each other while Garret paid the fare and Letty scrambled up the bus steps. Then they were on their way to Mavis, spinning through the rainy countryside, sitting side by side in the empty bus, grinning at each other because this was such a crazy thing to do and both of them were enjoying it. It was dark when they got into Mavis,

and Letty said she was disappointed that he could not see the mountains in the rain.

"Well, you'll see them tomorrow," she consoled herself.

It was then, for the first time, that Garret realized he was going home with Letty, and he wondered what sort of reception Letty's people would give a strange soldier who had persuaded their daughter to play hooky with him.

"Oh, they're grand people!" Letty assured him. "They love company!"

They turned in through a low friendly stone fence and Garret saw a gray stone house through the night rain, with windows golden-bright and a great white door that opened wide and a black and white terrier that leaped at Letty with a yelp of agonized joy.

They've lit the fireplace! Letty thought gratefully. As if they knew what a picture they made sitting there!

Garret saw the picture of them, like a Christmas card, saw them getting up from the fireplace with cries of happy surprise, with loud kisses and laughter and warm handshakes. A short, stout woman with bright blue eyes and a bashful smile, and a tall gray-haired man with a shabby smoking jacket and a Sherlock Holmes sort of pipe and thin, long-fingered hands with a strong grip.

Letty flung off her coat and tousled the dog, telling them how they had decided to play hooky and come home for waffles and tea. Mrs. Norton began to fly around through the rooms with her hands full of food, scolding Letty with good-natured banter. Mr. Norton sat down again in his armchair and regarded Garret with deep, kindly calculation.

GARRET thought guiltily: They think I'm in love with her. They think I want to marry her.

He felt uncomfortable at once. He had come here with a little waitress who quoted quatrains from the Rubáiyát. This was a different girl who curled her legs up on the sofa and feasted her eyes on her home and her parents. It was Letty's dog and Letty's huge yellow cat and Letty's books in the bookcase and Letty's battered upright piano. The house wove a fable of a different girl than the one who had stood in the withered garden and leaned to lift a shriveled unborn rose.

It was a strange thing to come suddenly upon the realization that a girl isn't born majoring in science and slinging hash for the privilege. A girl is formed by living in such and such a house, with a certain kind of people, with a dog like Rip and a cat like Mrs. McGillicuddy, and a battered upright piano and a deep golden fire sparkling in the November night.

He thought suddenly of Helen. Helen, who was born a commercial artist and lived in a smart two-room apartment in the Village and talked sensibly about marriage in a noisy night club. He did not have a home, nor a short story mother with a bashful smile, nor a father who wondered if Garret was good enough for her... nor a dog named Rip, nor a cat named Mrs. McGillicuddy. Neither did he. These things were all things he could never have. They shut him out with a finality that frightened him.

LATER, up in the "comp'ny" room, Letty sat on the edge of the "comp'ny" bed and fingered the tiny patch in the blue spread. He looked around the spotless room—at the threadbare rug and the handmade chintz drapes and the finely mended net curtains, and he thought: This poverty-stricken gentility is smothering me!

But he knew that it was not smothering them; that they met it with a nobility more enduring than anything he had known.

The thought of it irritated him.

He threw back the spread and stretched out on the bed, fully clothed, smoking a cigarette, frowning at the flowered wallpaper. In the next room, he heard Letty getting ready for bed, dropping her shoes, opening a drawer, rattling a hairbrush against a comb. After a few minutes she got up and knocked on the old-fashioned connecting door.

Letty put on her old blue wool robe and a pair of summer straw slippers and answered Garret's knock. He stood in doorway, looking at her as though he did not know who she was and cared less.

"I was wondering if I might ask for another blanket," he said coldly.

"Why, of course, Garret!" She smiled, but her smile was puzzled as though she knew there were plenty of blankets on the bed... as though she knew he was the best of guests to freeze for a week before asking for an extra blanket.

She went out into the hall closet and brought the extra blanket into his room and put it on the window seat.

"There now!" she said. "Have you everything you need?"

"Letty..."

He came over to the window seat and took her in his arms, all brush-blown hair and woolly bathrobe, and kissed her hair on the mouth.

Then he held her off, looking down at her with a slight smile. "Good night, Letty," he said slowly.

She was very frightened, and he knew she went swiftly to the connecting door and into her own room. She glanced back at him, puzzled for a moment, before

# 'm a jump ahead of Food Rationing.."

## SAYS MRS. WM. SHARP

Mrs. Sharp knows just what to do about "food alternates". She knows how to use "meat extenders" so that a little meat goes a long way. She has learned how to make one pound of butter do the work of two. In spite of rationing, she still prepares delicious, nourishing meals for her family. Almost from the first hint of food scarcities, Mrs. Sharp has taken this wartime meal planning problem right in stride.

Where did she learn what to do? Who tipped her off? The answer is simple. She, like thousands of other wives and mothers of war workers, is getting such timely help at Health-for-Victory Club meetings.

Already in over 350 top-flight war plants, H-for-V Clubs are helping homemakers keep their war-working families in top physical condition through proper food. Each month trained home economists explain and demonstrate how to plan health-building wartime meals.

Monthly Meal Planning Guides provide tasty, healthful menus, recipes and lunch box suggestions for every meal in the month. All menus take into account current food conditions. All are based on a thrifty food budget of about \$16 a week for a family of five.

The Home Economics Institute Staff at Westinghouse, who originated the H-for-V Club, prepares the Meal Planning Guides, movies and other meeting materials. These professional homemakers translate their "know-how" on meal planning and nutrition into this practical eating-for-health program to help the war effort. Moreover, they've prepared a timely booklet called, "The ABC's of Eating For Health." If you are not a Health-for-Victory Club member, you'll find this booklet of real value in helping keep your family in fighting trim.

NOTE TO WAR PLANT EXECUTIVES: If you are interested in making the Health-for-Victory Program available to the wives and mothers of your employees, or would like to have this program outlined to your Personnel Director or War Production Committee, write to Westinghouse at Mansfield, Ohio.

Active member of the duPont Health-for-Victory Club in New Jersey. Co-sponsored by the Atlantic City Electric Company

### Meat Shortages

#### Don't Bother Mrs. Sharp.

Each month her Health-for-Victory Meal Planning Guide gives a score of new low-cost, appetizing meat alternate suggestions.

"This Is Different from the last war," says Mrs. Martin, helpful mother-in-law of Mrs. Sharp. "Now, our H-for-V Club shows us how to make a virtue out of food shortages."

"Bet You Can't Guess What This Is," says Mr. Sharp, as he cuts a robust slice of tempting liver loaf. There's no menu monotony at the Sharp's.

### FREE! THE A B C's OF EATING FOR HEALTH

This 16-page book contains the essential facts about vitamins, minerals, protective cooking and wartime meal planning, on which the Health-for-Victory Club is based. Written in simple, nontechnical language, it's easy to read and highly informative. Free sample copy will be sent upon request. Write to

Stir into creamed mixture. Sift  $1\frac{1}{2}$  cups all-purpose flour, measure and re-sift with 1 cup Aunt Jemima Buckwheat Flour,  $\frac{1}{4}$  teaspoon Cinnamon,  $\frac{1}{4}$  teaspoon Nutmeg, 2 teaspoons Ginger. Add to creamed mixture, with  $\frac{1}{2}$  cup of Molasses. Drop from a teaspoon onto a greased baking sheet. Bake in moderate oven 375° 12-15 minutes. Makes 4 dozen.

GET BOTH — The Yellow Box for Buckwheats, the Red Box for Pancakes AND WAFFLES!

said, "Good night . . ." and closed the door. He heard her hesitate on the other side of the door, then move off without locking it.

He went to bed then and went to sleep. He did not dream. He awoke in the morning with the feeling of having slept completely with all of his body and all of his mind, and he awoke with a sense of peace such as he had never known. He lay under the blankets and smoked a cigarette.

The rain had stopped in the night, and the sky was high and crisp blue. He lay there smoking, thinking that in one more day he would be on the train to Colorado to the Cadet training school there. After that, overseas, and the blank of the future that he feared without hate, knowing that there was no help for it. He would go, and he would kill, and perhaps himself be killed. And what was it? A moment of dying, so swift, so blessedly swift. A moment, they said, in which all your past life was reviewed in a flash. But he knew that in that moment he would be thinking of only one thing . . . of lying here in Letty's "comp'ny" bed, seeing the distant purple of Letty's mountains, hearing Letty's laughter down in the kitchen wing, as she helped her mother with the breakfast. He would think of it because it was the most peaceful moment he had ever known.

He heard her feet along the hall, then. She knocked on his door and called him. "Come in," he told her.

She came in, smiling at him, holding up a small brown leather box. "Dad's razor."

She set it down on the dresser and asked him if he had slept well. He said he had slept like a top. As she turned to leave, her eye fell on that extra blanket still folded on the window seat. She hesitated a moment, then turned back to him with a determined set to her mouth.

"I thought you understood that I wasn't that sort," she said.

"I'm sorry, Letty," he said earnestly.

HE REACHED out his hand and after a minute's hesitation she came over and put her hand in his. "Don't quarrel with me today," he begged her. "Knowing you has been so nice. You see . . . I'm going away tomorrow. . . ."

"You didn't tell me . . ." she said faintly.

"It's been hard, somehow, to tell you. There's all of today, though. You said we'd climb the hills and you'd show me Mavis the way the angels see it . . ."

"Yes, of course," she said after a moment.

He knew she was fighting tears and he was sorry for her. "Is that coffee I smell?" he suggested gently.

"It's ready and waiting." She turned away. "You'll be down soon?"

It was a delicious breakfast with the sun pouring in across the table, and Mrs. Norton in a pleasant flutter about the wheat-cakes. Letty was quiet. She had been crying and her nose shone pink through a light film of powder. Garret thought: I've got to tell her all in one day and I don't know how.

AFTER breakfast they put on their coats and went out along a country road. They crossed through the fields where the sun shone hot on the dry grass, and their feet sent up a cloud of weed dust around them. There was an old climbing road that led up through a maple grove to a deserted sugar house. Letty told him, as they climbed on, all about the sugaring and about the jackwax the children made by pouring boiling-hot maple syrup on snow and letting it freeze into a gooey candy.

"I guess city people miss a lot," he said. "City children do," she told him. "Grass that they're not allowed to step on, and flowers they can't pick, and squirrels—"

"Why are we talking about city children, Letty?" he asked her. "We ought to be talking about us."

She kept on climbing without answering, without turning her head. In a few minutes, she turned off and he followed her through a tangle of fir trees. They came out suddenly on a broad ledge, and the mountain dropped away to a view of the whole wide valley.

Letty sat down on a rock and looked up at him, smiling at the expression in his face. "I feel," she said softly, "as though I had been here just yesterday. This place lives inside of you all the time."

"Yes . . ." he said, as though to himself. "This . . . this I'll always have!"

He looked down and saw the sun in her hair, and knew that she was dearer to him than anything he had ever known.

"Letty, I know I'm going away tomorrow, and this sounds kind of crazy, but . . . will you marry me?"

She did not look up at him. She looked out over the valley. "Why, Garret?"

He sat down beside her on the rock and picked up her two hands. "Because I love you, darling. If I ever get it all straight myself, perhaps I can explain."

"Don't explain!" she touched his lips with her fingers. "'One Flash of It within the Tavern caught . . .'"

"Yes, 'Better than in the Temple lost outright' . . . it's in there somewhere. Your loveliness . . . and a kind of peace that's never lost . . ."

THE END

"An' not only that—you can tell 'im his draft board called 'im too!"

COLLIER'S

JAY IRVING

## Globaloney Girl

Continued from page 20

scenario, Clare ducked the press. Worse still, she became "inaccessible" at the Wardman Park Hotel.

The press in Washington is an elite corps. It is composed of hard-working men and women. You just don't refuse to talk to Washington press people. Only Franklin D. Roosevelt gets away with that sort of thing and usually he comes up with a good yarn and a friendly smile and an inquiry about the missus and the kids to atone for his crime. Clare's avoidance of the newspaper people on her arrival for the opening of Congress was unfortunate for another excellent reason—the women.

The Washington Press comprises a generous number of implacable females. Some lively nailwork resulted when Clare slipped out of a side door after her train had arrived twenty minutes late. The dear girls had waited. And then when Clare, in a further burst of unintentional idiocy, denied herself to interviewers at the hotel, the heat was on.

### Head Bloody But Unbowed

Next day, the repentant Clare pleaded that she had been fagged after traveling for days on the train and had been late for an appointment, and that her train was two hours late. She said she didn't think they'd wait for her. Someone very cattily, but very accurately, informed Mrs. Luce that the train had been only twenty minutes and not two hours late.

"I checked up," the lady said, drawing blood.

Others later wrote the interview as something of a Vassar week-end homecoming combined with lines from the powder-room scene in *The Women* and moving day on the third floor back. One criticized her for wearing a ribbon in her hair instead of a hat, but as Jane Eads of the Associated Press remarked, those dames would have rapped Clare for wearing a hat if she had not worn a ribbon.

Incidentally, it was a little red ribbon on blond hair which, Clare says, she touches up when needful as what blond woman doesn't? She wore a "stop" red flannel dress and red shoes, and she looked (according to the male versions of the interview) swell indeed.

Congresswoman Luce immediately ran into constituency trouble. She was photographed on the steps of Congress wearing a scarf over her head—she hates hats. In Danbury, Connecticut, which is in her political back yard, they make hats, and they wrote and told her they didn't approve of her antipathy for hats. If you see a picture of Mrs. Luce in a hat soon, you will know that she is taking the easy way out.

The Ladies of the Press had much fun, too, with Mrs. Luce's candid remark that she wanted a place on the House Foreign Relations Committee because "that's what I know most about." This may or may not be true, but it was because she managed to impress Al Morano and other Republican war horses and nearly 7,000 voters who comprised her plurality in polyglot Fairfield County with that fact that the Beautiful Brain went to Washington.

Among those who had faith in Clare Boothe Luce's superior knowledge of international relations was Dorothy Thompson. Pundit Thompson, under whose awe-inspiring bosom beats a generous heart, publicly asserted her intention of voting for Mrs. Luce because, in her estimation, the Republican candidate knew more about foreign affairs than the Democrat, Mr. Le Roy Downs.

If you remember the cataclysmic catfight between the sleek Clare and the buxom Dorothy on the radio and in the papers during the last Presidential election

over the relative merits of Wendell Willkie and Franklin D. Roosevelt, you will admit Dorothy's kudos to Clare was a major piece of hatchet-burying. It's comparable to that imaginary moment when Westbrook Pegler shall publicly kiss Eleanor Roosevelt.

And yet, had it not been for Dorothy Thompson's advocacy of F. D. R. after deserting Willkie, Clare might not be in politics today. When Miss Thompson, who had "discovered" Willkie, switched her loyalties to Roosevelt and began campaigning for him on the air, there was consternation in the Republican camp. They needed a name speaker, preferably a woman, to battle Thompson.

The Republican party's desperation coincided with certain emotions which were gestating in the brain and bosom of Mrs. Clare Boothe Luce. Clare's sense of loyalty was outraged by Miss Thompson's redirection of affections. More than that, she felt challenged. Her husband doesn't call Clare "Mike" without reason. The "Mike" in the lady with the opalescent skin and steady blue eyes, wide cheekbones and pointed chin, was uppermost when she accepted the G. O. P.'s emergency call to action. After the first bout or two with La Thompson on the air, Clare was never able to shake herself loose from party exigencies afterward.

She had had a taste of that exciting, free life of the foreign correspondent, a craft which brings people so close to events that they sometimes feel as though they themselves are actors in the drama of international affairs rather than mere spectators.

Clare's first flight into war reporting had taken her to Poland, Holland, Belgium, France and Italy in the winter of '39 and the fateful spring of '40, and she saw Europe disintegrate like a flywheel gone wild. She wrote it all down, more or less as it happened, in a book called *Europe in the Spring*, which might better have been called *Europe from Behind the Plate-glass Windows of Embassies, the Better Hotels and the Wagons-Lits*. She wrote the book in five weeks, mostly sitting up in bed in an exquisite negligee and, as she says, why not? War reporting is still what Clare Boothe Luce wants to do most, next to writing a really good book.

### A Passport—or Else!

War reporting was very definitely what she wanted to do when, some nine or ten months before Election Day, the ward heelers and machine men of the Republican party of Fairfield County decided that their candidate from the Fourth District was to be Mrs. Luce. Clare had just asked the State Department to give her back her passport to enable her to go to China. The State Department refused. She asked again, this time to go to Australia. If fate or political ability decrees greater things for Mrs. Luce, you may blame the State Department almost as much as Dorothy Thompson.

In her last request for a passport, Clare added an ultimatum: "Give me my passport or, by golly, I'll run for Congress!" Again the State Department, in its splendid consistency, refused Mrs. Luce her papers, and Mrs. Luce ran for Congress, but not without considerable hesitancy. She had to be coaxed.

Al Morano "discovered" her, although some of the credit must go to the shrewd editor of *Greenwich Time*, Mr. Niver W. Beaman. Albert P. Morano says the "P" is for politics. He is a lawyer. He is short, stocky, energetic and, unless he's talking about his protégée, inarticulate and poker-faced. Al had been associated in politics

# "FIRSTS"

## A ZENITH HABIT

A GOVERNMENT official was being shown a new idea in the Zenith laboratories. In passing, he commented upon the outstanding manner in which the radio industry was effecting the rapid and continuous changes necessitated by war requirements. A Zenith official replied—he said:

"... the answer is easy. Radio and Radionics represent a trigger-quick, fast moving business. Concerns that couldn't 'change overnight' are out. In this industry, we're used to fighting with new ideas—only—now we're 'fighting' Japs and Germans instead of each other."

In that statement is evidenced the condition that made possible Zenith's attainment of industry leadership. Ever increasing public acceptance of Zenith name and product resulted from a never ceasing stream of Zenith "firsts"—new features—new devices and new sets which enabled us to truthfully say to the public:

## "ONLY ZENITH HAS THIS"

Today you find as commonplaces—essentials—of most radio sets—features first introduced to the public by Zenith—such as—

### "FIRST"

#### Push Button Tuning

Years—yes, years ahead of the industry—(1928) a Zenith set embodied push button selection of the station desired. Our slogan in 1928 was "Push the button—there's your station."

For over seven years, Zenith Radio Corporation has advertised on our short wave sets—"Europe, South America or the Orient Every Day or your money back." It has never been called upon for a refund.

### "FIRST"

#### House Current Sets

"Way back when" (1926) all home radios were operated from storage batteries until Zenith offered the first set run by house current.

BELOW—A FEW NEW ZENITH "FIRSTS"—"FROZEN" BY ZENITH  
CHANGEVER TO WAR PRODUCTION

### "FIRST"

#### Long Distance Push Button Portable

1942 saw the national introduction of a revolutionary new portable—the Zenith Trans-Oceanic. Without increase in size or weight it gave push button operation for foreign and U. S. short wave stations—tuned in the same way as locals—and standard broadcasts too. It contained a disappearing fish pole antenna plus dual Wavemagnets—operated from battery or house current—was born of Zenith pioneering in LONG DISTANCE RADIO RECEPTION.

### "FIRST"

#### Safety Auto Radio

The only auto radio you can operate WITHOUT TAKING YOUR EYES OFF THE ROAD—or—YOUR HANDS OFF THE WHEEL—the Zenith Safety Foot Control Auto Radio. This remarkable new radio was on the FORD, NASH, MERCURY, LINCOLN-ZEPHYR, HUDSON and WILLYS. Owners of these cars will gladly demonstrate their Zeniths—give you a "preview" of "tomorrow's radio today."

—AND THESE ARE JUST A FEW OF THE MANY ZENITH "FIRSTS"—

## "MILITARY SECRET"

Today all Zenith production centers on war needs. What we are making is a military secret. But three things we can tell you. First... we are dealing with the thing we know—Radio—and Radionics exclusively. Second... we are learning every day—gaining new knowledge which will reflect itself in Zenith civilian products when the time

arrives. Third... we now know—by first hand experience—that our Army and Navy are more than "up-to-date"—they are alert and progressive in thought and action—almost unbelievably so. This fact is a great reassurance to us here as citizens—it commands our complete confidence as it would yours if you knew what we know.

## RADIONICS

### the New Miracle Industry

Four great industries are destined to lead this country back to normalcy after victory is won.

Planes and Radionics are two of the four. Radio—never a necessity on ship or train—is as essential as the engine itself to that great new form of individual and mass transportation—the airplane.

**WEBSTER'S COLLEGIATE**  
A Merriam-Webster

with the late Doctor Albert E. Austin, Clare's stepfather.

"Early in January of 1942," Al relates, "Doctor Austin called me in and told me he was a very sick man. On January 26th, Doctor Austin died, and Mrs. Luce's stepmother, Mrs. Alice Lounsbury Austin, called me in to take part in the funeral arrangements. I was an usher. At the services, I met Mrs. Luce's brother, Dave, who's now a private in the Army.

"Anyhow, seeing Doctor Austin and seeing the family and one thing and another, something clicked in the back of my head, and I kept it there."

What had "clicked" was the inspiration to run Clare for Congress. He suggested the idea to Clare. She said the idea was very absurd indeed, but that she would think it over and give him an answer. Her "answer" was to leave on another journalistic journey to the Middle East. She did write Al, however, her reasons why she shouldn't run.

Al is a tenacious fellow. He talked the matter over with Niver Beaman. Beaman agreed Clare was a natural. Together, Morano and Beaman considered Clare's reasons for not running. These boiled down to the facts that (1) she was a woman, (2) she had considerable knowledge of foreign affairs but was totally ignorant of domestic issues, and (3) she had money.

Meanwhile, Mr. Luce, or "Harry," as he is known to his wife and intimates, had become interested. He, like Clare, loves a fight. Moreover, he thought that if he could interest his wife in something at home which would absorb her fabulous energy—anything except the theater, which would keep her in a world as much apart as having her in India or China—he'd see more of his beautiful wife. He was, secretly, all for this Congress business. Some people had said Clare didn't have a chance.

Immediately Clare returned from abroad, the publisher called a conference of his best reportorial and editorial brains at the Luce place in Greenwich, which the Luces call The House and others call The Purple Palace. At the conference at least one executive flatly advised Clare to stay out of politics. He was quietly but thoroughly reprimanded for having done so the next morning.

Morano, who has since become Mrs. Luce's secretary, Beaman and others bombarded Clare with reasons why she should run. "Maine and Idaho," said Beaman, "may still want their Congressmen to know how to raise the most potatoes per acre, but not Fairfield County." Together they overcame Clare's sensibilities about her womanliness and her wealth. They convinced her that wealth is resented by the average voter in a man, but not in a woman, particularly if that woman happens to be personable, intelligent, attractive if "not darn' near beautiful," and talented enough to have made her money herself.

Clare still wanted to be a foreign correspondent, however, and wrote a long, public letter to Ken Bradley, Chairman of the Republican State Central Committee, reiterating the reasons why she'd make a poor candidate. She still hoped to get to Australia and back to the war, just like a professional war correspondent.

#### She Knew What She Wanted

The turndown from the State Department clinched the matter, together with a personal realization that she wasn't seeing enough of Harry nor of her 18-year-old daughter, Anne Clare Brokaw, born of her first marriage to the late George T. Brokaw, heir to the Isaac Vail Brokaw clothing millions. Clare was 20 when she married Brokaw, who was then 43. The marriage was not a happy one. Clare has always known what she wanted and one of the things she'd wanted had been a

happy marriage. Ten years ago she married Henry Robinson Luce.

One of the charges the members of the social cat kingdom have leveled at Clare Boothe Luce—a rare woman who can wear flowers in her hair—was that she was ambitious. Clare decided to find out whether she really was and looked up the word in Webster's Dictionary. The definition gave the origin of the word as "ambitio . . . a going around for votes." For once, at least, the cats had been right. Clare was ambitious.

She went about Fairfield County seeking office, armed with a Goldwyn joke, \$2,492 in campaign funds, a pun, her "Let's fight a hard war and not a soft war" slogan, roses in her hair, a black silk dress and her St. Christopher medal.

Clare's Sam Goldwyn yarn was made to order for politicians. She visited Sam on the West Coast en route to China. He pleaded with her to write a script for him when she returned.

"Something simple but colossal," Sam said. "Please give me your word of honor you'll do it."

"Oh, I couldn't do that."

"Okay," said Sam in a burst of complete noncomprehension, "if you won't give me your word of honor, just promise me you'll do it."

Clare's campaign expenses were, according to Al Morano, a negligible factor in her election. "She could have won without spending a cent," he says.

It's doubtful too, whether her pun helped very much. It wasn't a very good pun.

"Why does the little Democratic duck walk so funny?" Clare would ask a sea of shining Italian faces in Stamford or Bridgeport or Trinacria. "Because," she would reply, "its pants are down."

#### Getting the Foreign Vote

Clare wowed Connecticut's many citizens of Italian extraction. She told them at Trinacria, which means "Three Corners" and is dialect Sicilian for their island, that she loved flowers and the sun and the arts. She even managed to say a few words in Italian now and then. To the Poles, Clare related her experiences in Warsaw and Lwow. When she repeated the Polish army war cry of "Plotsky, Plotsky, Plotsky," they stamped, whistled and cheered.

All the while she carried, like a white albatross about her neck, her husband's publications. One of these published an open letter to England. The Daughters of the British Empire went for Clare with blood in their collective eye. They saw in the open letter the bellwether of an American imperialism, an overt fifth columnism, a direct "threat" to the British Empire and a "menace" to Anglo-American unity.

"I quieted them," says Clare, proving that politicians, like artists, are born and not made, "with a careful statement, and then Life published an uncomplimentary photograph of the W.C.T.U. Ministers and earnest dries demanded where I stood, and what did my husband think he was doing? Could I tell them that, in these hectic campaign days, I was seeing Harry about as often as I got to see F. D. R.?"

The Candor Kid drew heavily upon her acquired knowledge of foreign affairs and the war for most of her campaign material. At one place she talked about the Indian problem and was distinctly on the side of the Indians.

Billy Prince, the Stamford G.O.P. war horse, tavernkeeper and prize-fight manager, loved it. "You're in," he told Clare. "Every politician is for the Indians!"

But Fairfield County was for her, despite its strange mixture of population. Fairfield County, like Gaul, can be divided into three parts—one, horsy, a second strictly white collar, and a third labor.

A certain Mr. Charles E. Ford, retired Greenwich railroad employee, was carried to the polls to vote for Clare. 'Twas the first time in three bedridden years he'd left the house. The dirty-collar and over-all boys went for her, too. Miss Doris Fleeson, one of the Washington girl reporters, toured with Clare one day. In a pool hall, Doris asked one of the cue artists whom he'd vote for.

"Why, Clare Boothe," the gentleman said. "And you won't have to pay me neither."

Clare stood outside factories in the mill towns and talked to the boys. She gave them paper matches with her picture on the cover, and she told them she was for labor, 100 per cent. Her labor platform was: (1) Labor's gains should be retained, (2) the Wagner Act is here to stay along with Social Security, collective bargaining and old-age pensions. To doubters, who questioned her union sympathies, she showed her own union card, a membership in the Dramatists' Guild of the Authors' League, unaffiliated.

To the horsy set she fed anti-New Deal stuff. News of the President's cross-country inspection tour had just been released.

"According to the President," Clare said, "the people are ahead of Congress. Congress isn't doing its job. Well, we Republicans are going to support the President again by giving him a Congress which will do its job."

Then she went into her "My, my, what bungling!" routine. She told her constituents how the Administration had spent \$100,000 for drums and bull fiddles for WPA projects in West Virginia, and \$260,000 for long-distance calls for the National Youth Administration. She reminded her hearers that Nero had needed only one fiddle to accompany Rome's burning. She wondered, cutely, whether the NYA boys had anything more important to say to one another than, "Hi-ya, kid, feelin' any older?"

Clare learned much about politics during her campaign. She learned, among other things, that the wealthier upper crust is as gullible as the middle-class filling and the laboring lower crust. She was campaigning for a "hard war," but precisely those people who would most dislike sacrifices principally elected her to Congress. Clare lost industrial Bridgeport, for instance, but carried swank Greenwich.

#### A Wishful-Voting Election

It's unreasonable to suppose (and Clare is the first to admit this) that the heavily taxed rich folk of Fairfield County want more taxes, less fuel oil for their big homes, fewer tires, less gasoline. Clare is painfully conscious of the fact that just as many voted for her in the vague belief that she would give them more gas and fuel oil, reduce their taxes and influence the speedy return of Johnny from the wars, as voted her into office really to fight a "hard war." If American troops had landed in North Africa before Election Day, she might never have gone to Congress.

But Al remains adamant. "She'd 'a' won anyhow!"

This Al, whom Clare calls, "my own little Christopher Columbus," is irrepressible. He refuses to regard Clare's success in Fairfield County as a measure of the American electorate's gullibility rather than as a yardstick of his beautiful protégée's political genius.

"There's nothing this girl can't do," he says. "She might even get to be President, or anyway Vice-President. Maybe you noticed the other day Mrs. Eleanor Roosevelt or Pearl Buck or somebody said it was imperative a woman sit at the peace conference. You just watch. It might be Clare Boothe."

There might be something in it.

THE END

# ON TIME AT TUNIS

**F**OR PERFECT TIMING and dependable performance, the outstanding aerial achievement of the opening phase of the Allied African Campaign was the 1,500 mile, non-stop mass flight of 44 Douglas Skytrooper Transports from England to an airdrome near Tunis. The mission of landing paratroops was completed successfully and not an airplane was lost. No other paratroop attack in history has been made over more than a small fraction of the distance! This is but one instance of the whale of a war job Douglas Transports are doing in order that skyways may become peace-ways again. Douglas Aircraft Co., Inc., Santa Monica, Calif.

# A Ship in Norfolk

By Mary Freels  
Rosborough

ILLUSTRATED BY  
HARRY L. TIMMINS

For a woman who has known love, it is doubly hard to refuse love when it is so willingly offered to her

FELICITY couldn't get the words out of her mind. The captain's wife had said them so casually in her warm, bubbling-over voice, as she gave Felicity and the twins a lift home in her car.

"The captain's home from his inspection trip, thank goodness! He said there were some English ships in dry dock at Norfolk. I knew you'd be interested."

They'd been to the market and it was another one of those hard, bright, hurting days. There had been no mail.

Felicity gripped the bag of groceries so tight she could hear the eggs crunch softly together. But her voice was cool and crisp as ever: "Ra-ther! Which ones? That is, could one have been the Sussex?"

"Oh, he didn't remember the names. Probably wouldn't have told me, if he had. That man . . ." the gay voice bubbled over, ". . . thinks I haven't any sense about telling things. So, he's careful never to let out information of military value."

How clever of him, thought Felicity gazing stonily out at the rustling palms.

"Is Lieutenant Fenwick on the Sussex?" asked the captain's wife.

Felicity said "Yes" abruptly, then was

silent. She knew she was being difficult and Mrs. Daniels was being kind. Americans were all kind, and it was as warm and overwhelming, sometimes, as their too-bright sunshine.

The captain's wife was a small boyish young creature with frank eyes and short curly hair. Her husband was head of the naval base, near by, and he was young, too. Youth seemed to be a fetish in America, or a brilliant, efficient habit.

THE car turned down a narrow street with scattered, silent houses. The last one was where Felicity and the twins lived, and around it the woods encroached . . . a Florida jungle of palms, scrub oaks, and magnolias, draped with Spanish moss. It had fascinated Felicity at first, but now she feared it. She dreamed at night, smotheringly, that it was growing right on over the house.

But the captain's wife was making another effort. She was still being kind. . . . "Come tomorrow at six, for cocktails," she said, as they stood by the car. "The captain has asked some British officers who are touring the state. You'll enjoy

meeting them, hearing English voices again."

"I don't know why you're so nice to me!" Felicity smiled, and it changed to grave, young face, completely.

"Goodby, darlings!" Mrs. Daniels waved to the twins, whom she made much of. They stood sturdily beside Felicity, waving and calling goodby in their clear voices.

Felicity glanced down at them. David and Diana didn't even look like the same children, any more, so chubby and tan. When they sailed, their brown eyes were enormous hollows in white faces. Now, even their voices had changed, with slang and Southern speech, easily acquired for them, were only four and a half. . . . Eight months since she had fled with them, blind panic, from London. Two years now, since she had seen David. . . . It was always a mistake to run away, even if it did it for someone else. This running away was like death . . . so easy to go, so impossible ever to return. . . .

It was raining the next morning, (Continued on page 67)

Bill smiled at her, as the twins tore open toys and candy. "It's not a new approach," he said, "it's really good-by. I've been ordered away. Sea duty"

## *How American it is... to want something better!*

IN THIS LAND of the free where every woman wants a "different" hat and every man a "different" necktie, it might not be surprising to find strongly differing opinions even about a moderate beverage such as ale.

But wait a minute. What all Americans are really looking for—is "something better." Thus, so *many* have found an ale—one particular ale—which lives up literally to the "Purity," "Body," and "Flavor," inscribed upon its 3-ring trade mark, that it has become...

*America's largest selling Ale*

"First in America"

Lewis W. Douglas, President

1843... OUR 100th ANNIVERSARY YEAR... 1943

34 NASSAU STREET · NEW YORK CITY

for every Democratic candidate for President since Hughes ran for the office. I was becoming more and more weary of politics. I didn't mind being on the losing side; I was getting used to that. Perhaps I even took some pride in it.

I do not feel that I owe anyone an apology—or even an explanation—because I have shifted from party to party in search of the best candidate. It must be admitted that the ones I went down with were, with rare exceptions, better than the ones I preferred not to win with. At the worst, it has left me free to follow my own bent. At the best, it was like rubbing one's fingers vigorously over a nutmeg grater.

I had been a delegate-at-large to the Progressive convention in 1916, and to the Republican convention in 1920. I did not know then—in fact I would not have dreamed it—that I was to be a delegate-at-large to the Democratic conventions of 1936 and 1940. If there is anyone in the United States who can come close to this record, let him say so now—or else.

### A Fall Off the Fence

With few victories and a long list of defeats to show for my political efforts, I came up to the barrier in Chicago in 1932 to lead off for Thomas J. Courtney, Democratic candidate for chief county prosecutor, and for the late Anna Wilmarth Ickes, Republican candidate for the Illinois State Assembly. I was of the opinion that if I made a creditable showing in these two campaigns, that would be about all that could be expected of me, and my average would be raised accordingly.

Basil Manly, now a member of the Federal Power Commission, came to Chicago about that time and asked me to join up with the Democrats backing Franklin D. Roosevelt. I told him that I was sick unto death of politics. If, I argued, I should get into another Democratic campaign, I might find myself off balance. Besides which, my Republican candidate was already worrying about my political bilinguism.

How I did get into the Roosevelt camp and campaign in spite of my high resolves, and how I received my appointment to the Cabinet has been told many times. Sometimes the telling has been straight, although it has pleased some to insist that it was in payment to Hiram W. Johnson for his outstanding part in the campaign. I don't know what it takes to convince them that what Hiram Johnson did was to say, when President Roosevelt asked him about it, that in his opinion it would be a good appointment and that he was for it. He could have blocked it. That he didn't is probably the blackest mark on his otherwise very fine political escutcheon.

Suffice it to say that President Roosevelt offered me this job—to which, to the disappointment of many, I have clung like a leech ever since—the first time that he laid eyes on me. Perhaps if he had taken another look, he mightn't have made what so many have regarded as a major mistake.

He did sleep on it, however, giving him an interval during which he could try me out on Senators Walsh, Johnson, Cutting, Hull, Norris, LaFollette, et al. I hope that none of my readers will acquire a violent distaste for these men for not at least making an effort to keep me out. Let's give them the credit of assuming that they didn't know what they were doing.

Back in Washington from New York, I read in the newspapers that I got the job because, according to Roosevelt, he "liked the cut of my jib."

The fact was that I was to be the Secretary of the Interior. Not a bad job for jib! Roosevelt had told me that he wanted a man at the head of Interior who could say "No." (And who, may I ask, can say it louder and more disagreeably than a curmudgeon, and especially a curmudgeon?) Roosevelt had "followed my career," he told me (I wonder if really had!), he and I had "stood for same things," and he had "about concluded that the man he wanted was Har Ickes of Chicago." Would I come back the morning for a final verdict? Would I?

I went into the big English oak-paneled Secretary's office and hung my hat on convenient hook with the resolve that the end of any day, if conscience dictated it, I would put that same hat firmly on head and close the door behind me good. If a man goes into public office such a state of mind, he can get along with himself all right, even if he may not be able to get along with others. I had many ideas anyhow as to how much it was worth grant favors just for the sake of being regarded as a "good fellow."

A favorite story of mine has always been the one about the Speaker of House of Representatives, "Uncle J. Cannon. One day he was swinging along in picturesque fashion in a street in his home town of Danville, Illinois. He was accompanied by a friend. There approached them a citizen of Danville who Uncle Joe had known well for years. They passed each other, Uncle Joe was his hand in friendly fashion and greeted his fellow townsman heartily. There was no response. Just a stony stare. Uncle Joe turned to his friend at his side and remarked, "What's the matter with that of a gun? I never did him a favor."

I have never done favors just to make a good fellow of myself. I have made quota of enemies during the ten years I have been a member of the official family in Washington but only a few of them have been really personal. I have made my friends too. (Cries of "Oh, come now, let's not exaggerate!") And I have enjoyed the work, even during my frequent enforced retreats to my specially constructed brickbat shelter.

### Freedom of Speech

Which raises another point: I believe that Americans penalize the holders of public office as no other race of people does. It almost seems that we don't want our public officials to go straight and do a good job. Else, why do we invent smug when there is nothing authentic to smug? Cain with or about? If there doesn't happen to be anything particular to criticize you can confidently leave it to somebody to manufacture a juicy bit.

Before coming to Washington I lived already a long political life (too long according to many), made up mostly of reverses. My ten years in the nation's capital have been in the nature of a postgraduate course leading to the degree D. C. (Doctor of Cussedness).

When I leave it, I will have passed through all the stages of distemper and will have demonstrated all that the greatest living expert can do in the way of smug, surface, and aerial attacks upon the smug and the self-righteous, to nothing of the hypocritical and the whose feet have become warped through trying to walk straight on a crooked path.

Here I am, at the age of sixty-nine, corny, chronic and conspicuous grocer who is variously referred to as "the contemptible Mr. Eye-ks," "the ill-tempered Mr. Ix," "the vituperative Ick-ee," "Itchy," or just plain and simple "Sc-

p.s." To some folks I am "a bilious fish-we," "horrendous Harold," "a hatchet man"—in other words, I have arrived and at the moment enjoying the distinction of having driven a lot of newspapermen and in their search for new names that will express their own bilious feelings about me and at the same time pass through the mail without stirring up the postal authorities.

It isn't long ago that the Seattle Times told its readers that "we have yet to hear that Mr. Ickes has a friend in Alaska." Of course, the Times is closer to Alaska than I am and probably has checked the matter more carefully than I have been able to lately. But I am wondering if it conveyed the territory adjacent to Wood-Clapper, just south of Mastodon and the Precupine River. The reason that I ask is that I have understood indirectly that there was a fellow right in there somewhere who claimed to be a friend of mine and I was wondering if anything had happened to him or if he had moved.

The Kansas City Journal ran an editorial—a good-will editorial—in which it praised everything on the earth and wound up by saying, "We don't like the weather we have been having, nor Harold Ickes." Such flimsy stuff is a public man's reward built!

I am under a particular debt (which I hereby acknowledge) to the newspaper columnists who have hewn out a special place for me in their cold and clammy mental crypts, where I am kept to await the day when their syndicate bosses will dig out for a horrible example. Then I am dragged across the front pages of the country to the explosive delight of fifty million readers! Now, they do say that fifty million Frenchmen can't be wrong! So what about fifty million Americans? Magazine articles, which have been manufactured about me with presumed authority after long and painstaking "investigations" into my known and unknown past, have done much to create a character that has been widely accepted as a faithful portrait of Harold L. Ickes.

They picture him as a crusty geezer, intuitively come out of total obscurity to preside over one of the great departments of the government—an unfeeling old gink who sees to it that people don't get the gasoline they need; that they shiver for want of fuel oil; that the men and the women who work for him extend themselves beyond the reasonable limits of their endurance.

#### Influence of the Press

According to the writers of these articles, he has built up an OGPU, if you please, which he uses to pry into the private lives concerning which he may have a unhallowed curiosity; he has never been known to smile except at his own jokes and, as a matter of fact, he has no sense of humor; he doesn't feel that he has started the day right until he has bitten at least one mouthful out of the leg of a fellow Cabinet member.

There is no gainsaying that the newspapers as a class have done something through the years to make me what I am, and I love them for it. It is impossible to say what I would have achieved without their valued help.

Foremost, of course, and almost in a class by itself among newspapers that are allergic to me is the Chicago Tribune—good old WGN, run by good old Robert Rutherford McCormick, a man of many marvelous self-acclaimed military exploits. Almost the last time I saw "Bertie" McCormick was in Paris during the last world eruption, when he told me that he was there suffering from "slight shell shock." I never realized that it held on so long as it has in his case.

"Cissie" Patterson, who presides over the destinies of the Washington Times-

Herald is, you may know, a cousin of Bertie's, although neither boasts of it, naturally. This may explain a lot of things. Although discreetly mum about the relationship, each is the other's own best tout. What Bertie or his minions think of me become the inspired thoughts and words of Cissie just as soon as the Tribune reaches her desk. Of course, if the New York Daily News, run by her brother, Captain Joe Patterson, gets there first, Cissie clips and pastes the leading editorial and rushes to press. Why belabor the tired and befogged brain when a pair of shears will do the job so much better?

Running the Chicago Tribune, the Washington Times-Herald and the New York Daily News a close second as an Ickes hater, is the New York Herald Tribune, whose owner, Ogden Reid, will be grieved to be reminded that many years ago his beloved paper was contaminated by a lot of copy written for the Chicago Record by a young and half-starved but budding curmudgeon by the name of Ickes.

#### Sour Notes from the Orchestra

I will not attempt to rank the columnists as I have the newspapers in the order of the contribution, gratefully acknowledged, which they have made toward the eminence that I have reached in my chosen profession. It is enough to say that I cannot imagine Westbrook Pegler, Paul Mallon, David Lawrence, Arthur Krock, Henry McLemore and a few other choice ones yielding even to one another in the intensity of their high disregard for me!

Reading from left to right in hate-symphony formation (but not, as I say, necessarily in the order of the usefulness of their antagonism to me) are Pegler, master of the rattlebones; Mallon, who beats the tom-toms; Lawrence behind the *corno di bassetto* playing, not truly, but loudly; Krock blowing into the *contrafagotto*; McLemore straining himself at his penny whistle.

Said one of them deprecatorily not long ago with reference to my work as Petroleum Co-ordinator (now Petroleum Administrator): "Any of the newspapermen of whom Mr. Ickes is so contemptuous could have told him how to use his opportunity, but he missed it."

Fortunately I proceeded on the supposition that there was likely to be a scarcity of petroleum in the Atlantic Coast states on account of a deficiency in transportation which was even then apparent and likely to be accentuated as more tankers were sunk or diverted. Had I taken the advice of one or two of the columnists whose names I will not mention, we would be in worse straits today. As luck would have it, I had the benefit of more expert counsel.

I wouldn't feel that even this sketchy peek into my past would be complete if I didn't drop a word of encouragement for the sourpuss of tomorrow. Don't forget that grouching is not without its compensations. It even has its high rewards. For instance, Reichsfuehrer Adolf Schicklgruber once made me a diplomatic incident—as though anything about me, even an incident could be diplomatic. He gutturalized his contempt for me just because he couldn't buy some helium from us.

And Mussolini! By the way, whatever happened to the buzzardly Benito? Still with the Italians?

It's good to have such enemies. Of course, they have since been so busy that they have forgotten all about me, but it makes one feel that it does pay, after all, to grouse through life—a little, anyway.

So with a bit of philosophy to be found in one of my favorite Latin texts, *Frustra laborat qui omnibus placere studet* (He labors in vain who tries to please everybody) I take my leave, reasonably certain that I haven't pleased anybody.

THE END

## 8 miles straight through a mountain

To an embattled America, the Cascade Tunnel on Great Northern's main line in Washington has attained new and tremendous importance.

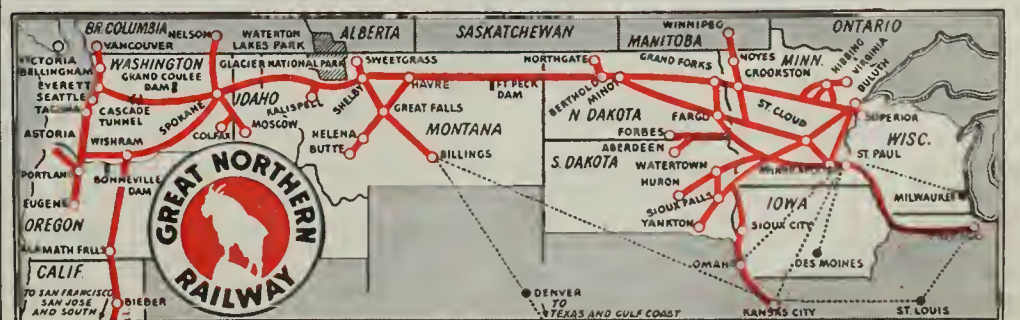

Piercing the Cascade mountain range for 8 miles, this longest railway tunnel in the Western Hemisphere permits swift, safe movement of men and materiel of war through rough country when speed and dependability of transportation count heavily for Uncle Sam.

Men fought stubborn, solid rock for three years in constructing the Cascade Tunnel. When the bore, straight as a rifle barrel, was completed in 1929, many time-eating, over-the-mountain miles of line were eliminated, further reducing what already was the shortest rail route between the Great Lakes and Puget Sound. A complementary improvement was electrification of 75 miles of railway through the Cascades, including the tunnel.

Symbol of never-ending improvement in Great Northern's service to the nation, this peacetime engineering achievement saves precious hours and miles in America's surge to victory.

## UNCLE! UNCLE!

By Walter Davenport

BY RADIO FROM LONDON

The hearts of America's soldiers go out—in typical soldier fashion—to Britain's forlorn war orphans—the bewildered tykes who give so much more than they receive

SINCE that night when we were lost in the stifling blackness of that West Country road. Ned Pan has become a nephew of the United States Army.

An hour or two down from London, an innkeeper told us that all we had to do was to follow the road and we would surely come to the Army camp. And if we would keep on going, he said, flinging his arms hugely upward where the sky must have been, we would come to the boiling ocean, beyond which, to him, was that almost mythical country, America.

"Jehovah made it with a nod of his

good head," he called from his window, "and I am not the one to speak ill of it." We guessed that he was speaking of the Atlantic.

But the road was narrow and it twisted and spun like the path of a field mouse, and the blackness was as thick as the West Country accent. We were about to turn back, or maybe back up, and ask the man to bed us for the night. Like the dull cold, the blackness had us discouraged and perhaps a bit frightened. Our driver, who smoked a pipe which never went out, although we never caught him loading or lighting it, was discouraged too.

Coming down from London he was garrulous enough for a while. But now he had chucked all that and was content to growl the strange oaths of his home country, which we gathered was somewhere up along the Scottish border. He cursed Hitler for the most part for making the war

but damned Parliament, too, for not giving a man the light to find his way to perdition in—"Be dom' to it."

But we didn't turn back or back up. From just ahead (in the thick blackness that deafened, distorted and confused as well as blinded you) came a small eerie piping—an unearthly falsetto tootling which didn't help our morale any. We shouted, "Who's there?" But we might as well have shouted into a bale of cotton.

The tootling drew nearer and presently out of the black there emerged a very small, shrunken boy in an awesome collection of somebody else's clothes, playing over and over a little refrain on shepherd pipes—like Pan's pipes.

We can't give you his surname for reasons that we will set down in a moment or so. It doesn't matter what his family name is anyway. His pipes, his mysterious, sudden appearance out of nowhere, his small

wise smile and his somewhat pitying tolerance of us made him Pan to us—Ned Pan. He is a Cockney kid from London, from Mile End. In the blitz of 1940, his mother had been crushed to death in the wreckage of the slum tenement they had lived in.

Sometime later—and Ned Pan was not quite sure when—his father, a soldier, died in the Far East. The British social service people had distributed the kids seven of them. And Ned Pan had come to rest for the duration on a farm in the West Country. Thus we summarize a tale of horror.

When we Americans called it horror Ned Pan, whose parish records say that he is twelve, whose face is the face of a man but whose body is that of a child of eight smiled indulgently at us and said, "You gets used to it, sir!"

Ned Pan knew where the camp was and didn't think much of them as didn't. Of course, he would ride with us to show us the

won't take place in a month of Sundays. That fellow will get short shrift. He's going to be kicked downstairs." And the voice went on talking in crude, rather general terms. Nevertheless, it was clear what he meant: Namely, that the hostile minister, who had persuaded Hindenburg to ban the S.A., would fall, and that the Party would get back their private army, their S.A. division. There was no one in the dark hall who did not understand that.

There was a silence; people held their breath. Into that silence, unexpectedly, frighteningly, Lautensack roared in his natural voice: "Don't laugh! I forbid you to laugh. Laugh if his words do not come true." But no one had laughed.

And again there was a silence. But then out of the darkness came a thin, timid, and yet maliciously challenging cry: "And when will that be? When will your words come true? When will the minister of war be dismissed?" About this, Oscar had no information; it might be some time yet, that was all Hannsjörg had told him about it. So he was silent a moment. And immediately the thin voice went on asking, mockingly: "Will it be this year, or in five years, or in ten?"

Oscar had to answer the insolent questioner, at once and unambiguously, else the whole effect would be lost. He closed his eyes, went into a trance, and, in his ordinary voice asked into the other world: "When will the minister of war be deposed?" He listened into himself. Then, after a long silence, painfully digging the words out of his inner being, with several pauses, he announced: "He says it will be within twenty-eight days." Not even the most spiteful quibbler could say that was vague or left the prophet too great a margin.

Stupefaction possessed the audience. The curtain fell; the lights in the hall went on. For a moment they still sat in a stupor. But then they awoke, and then came the applause, scattered at first, for many were still stunned, then stronger and stronger; and finally it was that shattering, deafening applause which Oscar had heard in his dreams.

He had conquered these two thousand human beings. They wanted to believe. They believed.

OSCAR could not have explained why he had said "within twenty-eight days." He could just as well have said, "within twenty days," or "within sixty." It had really been his inner voice which had spoken.

Hannsjörg was very uneasy. "You, with your setting of an exact date, have turned the whole thing into a pure gamble," he complained.

Oscar, however, hardly listened to him. He was full of cheerful superiority; he would not tolerate the faintest doubt about his prophecy, either in himself or in others.

The newspapers reported the prophecy as a curiosity. Then when fourteen days had gone by, twenty days, and still the prophecy had not been fulfilled, they made fun of Oscar, some subtly, some broadly.

The minister himself felt safe as a ship in harbor; he had the word of the marshal, of his brother officer.

But the group around the president continued to make his former comrade distasteful to the Old Man. Finally, the minister, to his own and the whole country's great surprise, was sent packing.

"There's only one thing on which one can count in Germany these days," he said bitterly to his friends, "that's the disloyalty of the Old Man." However that might be, he was out.

The news came on the twenty-third day after Oscar's prophecy.

Two thousand people had heard the prophecy with their own ears, the prophecy which had now been so gloriously fulfilled. They spread Oscar's fame. His two thousand followers became twenty thousand, the twenty—two hundred thousand. Hannsjörg, with the aid of the Party's propaganda machine, heightened the sensation. The two hundred thousand followers became two million.

The circulation of Germany's Star rose about four hundred thousand. Untold numbers who tried to book a consultation at the office of the Society for the Dissemination of German World Philosophy had to be turned away. Night after night, Oscar was able to bathe in applause. All the vaudeville theaters of the German-speaking countries tried to engage the Poetry and Truth act.

There was no thought of limiting the Landgrafenstrasse standard of living any more. "The pig's in clover again," Hannsjörg said cheerfully, and he himself encouraged his brother to be spendthrift, to "live on the fat of the land."

More and more, Oscar's dreams were fulfilled. He was one of Posener the jeweler's constant customers. He loved colors; he loved jewels. On the desk in his "den" he now had a bowl of costly wood, filled with semiprecious stones, and he liked to run his large white hands through the colorful glitter. From the Bernheimer Galleries in Munich he bought the Flemish tapestry called The Alchemist's Laboratory.

Oscar also ordered the building of a princely yacht. It was to bear the simple name of Sea Gull, but was intended as a setting for sumptuous feasts, a vessel more luxurious than anything to be seen on the waterways surrounding Berlin.

Enough was not enough; Oscar was driven still further. He had noticed an estate near Potsdam, a small ancient manor house called Sophienburg; it stood on a grassy rise and its simple, elegant façade fitted his idea of the front of his future living and working quarters. The interior of the house was old-fashioned, in bad repair; the whole building needed a thor-

ough remodeling; but this was exactly what he wanted. He bought Schloss Sophienburg and took over the heavy mortgage on it.

Nevertheless, things did not look quite so delightful in Oscar's inner as in his outer landscape. He needed more than the admiration of the masses, more than Alois' and Hannsjörg's faith. Oscar thirsted for assurance; every new proof of his greatness, however petty, was welcome to him, the more naïve the better.

Around that time, little Alma, the seamstress, was joyfully amazed to find herself receiving more and more frequent visits from her great friend. But little Alma's faith did not suffice him; it was too weak a tonic for his inner discomforts; he needed something stronger. "What shall it profit a man if he gain the whole world and lose his soul?" Still, from time to time, that Biblical sentence in his grandmother's harsh, awkward, literary German would drone in his ears. True, the passage did not apply to him, his soul was in better shape than ever, but at bottom, for all his art, his success, and his gift, he had not snared a new human being for a long time.

KÄTHE, if he wanted to be honest with himself, still wasn't in his net. He hadn't had a serious discussion with her since that scene after Tischler's suicide. She was affable, she was always at his disposal, accepted his moods, pleased him with little attentions, did not torture him with reproaches or jealousies; she loved him; she was a beautiful, friendly, lovable mistress. But he would have liked her to be more. He wanted to live with her, wanted to marry her. Yet with all his inner brazenness he had not brought himself to speak to her about it. He waited for her to make the first move. But that was exactly what she did not do. Obviously she was satisfied with the bond between them as it was. She loved him, but she did not belong to him. Behind all her friendliness and amiability he sensed disbelief, distrust. She doubted his gift, his whole personality.

One day he could not stand it any longer. "Do you really believe," he asked her challengingly, "that I'll still make the

## AUTO LIFE

**Get The Most From Your Mileage Ration  
— Check Your Car's Life-Line Today!**

OFTEN little but important things can help stretch your ration to cover more car miles. This is especially true of the small, but complex units, which make up the electrical system, your car's life-line.

For example, the distributor does more than distribute electrical energy to spark plugs. Actually the distributor is a precision instrument. It delicately balances intake vacuum and centrifugal force to time the explosion in each cylinder with split-second accuracy.

Wear, dirty or pitted points, poor electrical connections or a weak condenser are a few pint-sized troubles which can waste gasoline by the barrel in America's motor cars.

Adjustment or replacement of a minor part may be all that is needed to restore "like-new" performance. Ask your car dealer, service man or one of the thousands of registered Auto-Lite Service Stations to help you save gas and keep minor troubles from becoming major repair bills.

grac, that I'll live up to the mask? Do you believe I have the stature?"

Käthe had feared this question. She did not know what to answer. She didn't believe, and yet she did believe.

"Do you believe I have the stature?" Oscar asked again. He waited. He heard his own heart. For one tense half-minute he waited. Then at last her lips opened; a faint troubled smile appeared on her clear, trusting face.

"I don't know," she said in her crisp voice and the way that she spoke those few words with an effort, rejecting yet sparing him, condemned him more profoundly than a long speech of accusation.

But no—he wouldn't resign himself so quickly. He made a renewed and desperate attack. "But you, yourself," he began, "witnessed how I saw into your being. You witnessed how I named that the minister would have to be the date nobody could have known. I know that I have the power."

"That isn't it," she rebuffed him, "that's the point. That's not significant," she added, more decidedly, and she was conscious that in her last words she used one of Paul Cramer's favorite phrases.

From this decision there was no appeal. He abandoned his efforts.

She said, with a little attempt at joking: "Don't make such a dreadful face, Oscar. Let it be enough for you that I love the way you are." And almost with bitterness she added: "I have to let it be me too."

ON HIS desk in a distinguished but little-read periodical, Oscar found an article which Petermann had marked for him. The article was entitled *The Conscience* and its author was Paul Cramer. Oscar read it. It was a long, thorough article. Herr Dr. Cramer had exerted himself first he enlarged on the symptomatic aspects of the increasing success which accompanied the activities of Oscar Lautensack the charlatan. He pointed out the social and economic causes of that suc-

cess. He compared the effectiveness of Lautensack the orator and miracle worker with that of Adolf Hitler the orator and miracle worker. Oscar smiled, angered and flattered. Why, this was a regular dissertation! The fellow took him seriously; he couldn't complain of that, and the company in which he put him wasn't the worst.

Then Paul Cramer's essay went into details about Oscar's life, psychological details. The doctor had very exact information about Oscar's biography, as well as very exact information on the technical aspects of clairvoyance.

But now Oscar knew why that slinky Petermann had marked the article for him. He grew more and more gloomy. With an objectivity which in its dry, aggressiveness seemed doubly mean, Herr Cramer poked around in Oscar's past. Where could he have dug up all this material? Now he was even turning his attention to Oscar's school days in Deggenburg. He told an anecdote, with malicious comment.

In a school assignment the fourteen-year-old Oscar had quoted a remark of Goethe's, to prove some daring point; the remark, however, was not Goethe's at all, it was Oscar's. The teacher, a little suspicious, had asked in which work the quotation was to be found. But our Oscar, without embarrassment, lied impudently and cheerfully: "In Wilhelm Meister." He had thought that the discursive novel would contain much that might just as well be by him, Oscar, and certainly the teacher would not hunt through the whole long book for the quotation.

So much of the story Paul Cramer might tell; Oscar wasn't annoyed by that; he himself had often told it. But Paul Cramer went on to recount how Oscar, while he was lying, had looked urgently at the teacher and had commanded mentally: "You must believe me, you must, you must." And that made Oscar see red with fury. For much as he was accustomed to dress up his inner self, to praise it, to display it to everyone whether they wanted to see it or not, he had jealously locked up

in himself just this one little detail. It had been the first time that he had become conscious of his power over people.

Only one person knew about it. He had told Käthe, in a moment of intimacy.

And now Käthe had profaned this secret of his, one of his most valued possessions, had been the first to betray it to an enemy.

Oscar had felt a sensation of guilt toward Käthe since that conversation, since that "I don't know." She loved him although she did not respect him, she loved him not for his gift but for himself. Therefore, he was in her debt. But now she had betrayed to his worst enemy what he had confided to her in a sweet moment of friendship. They were quits, Käthe and he. This Paul Cramer's mean attack had a good side, too. Oscar was filled with a keen delight that he now had a weapon against Käthe.

On that same day he gave her the article, asked her to read it at once in his presence. And while she read, he watched her beautiful face and saw with satisfaction how a deeper and deeper flush mounted in that face, a flush of anger, of shame. But mixed with her anger and shame was the memory of the hour when Oscar had told her his little, childish, odd experience. He had been very lovable when he told her, humble and yet full of a naïve self-esteem, thoroughly Oscar, with all that was good in him and all his weaknesses. He had been proud as a peacock that even as a boy he had been able to force his will on an adult. Yes, she had loved him at that moment, loved him very much, just as he was, knowing exactly his limitations and his weaknesses.

In such a mood, in good faith, she had told Paul the little story, on one of those rare occasions when she had spoken to him about Oscar. But Paul had abused her confidence.

Oscar sat in silence, watched her read and felt what she thought, and was clever enough not to allow himself one word of triumph. She, too, after she had finished, was silent for a long time. Then she said, "Oscar, he's done you an injustice," and her voice sounded even crisper than usual. It was also the first time in a long while that she had called him by name.

He was filled with a deep satisfaction. And the best of it was that the enemy himself, tripped up by his own cunning, had given him this day of joy.

THAT very evening, before they had finished eating, she spoke to Paul. She reproached him with the article, called him mean, despicable. Her long, brown eyes were wrathful; her expressive face mirrored her excitement.

Paul was sitting there in his smoking jacket and slippers; he had been sitting, chatting, glancing through the newspapers, comfortably, as was his habit. When Käthe began to speak he looked up. He did not interrupt her, and even when she had finished, he said nothing for quite some time, contrary to custom. He had listened to her attentively, and attentively now he looked at her. She was beautiful in her anger, she was his beautiful, dear sister. She had many of the traits of her harsh, stormy father; when she was angry she talked nonsense like him. But Paul loved her most when those severe, vertical furrows cut into her well-shaped forehead.

Yet at the same time indignation mounted in him. What had he done that was so wrong? To call his essay, his calm, considered essay, despicable—that was going too far. Unexpectedly the memory of the encounter in the Eden Hotel lobby came to him. He did not know how he had got out of the lobby that time; he did not want to know; he did not want to ask his sister. That fellow must have done something embarrassing, something humiliating to him, and even now when he thought of the encounter, there was a

measureless, unreasoning fury in him against that man and against his sister.

"Did you really expect," he asked, "that I would spare this Lautensack because you've become infatuated with him?" His deep voice climbed higher: "Did you really think I'd be chivalrous toward him. I wouldn't think of it. I'm no courtier. I'm a writer." He stood before her in his patched smoking jacket and his worn slippers; he lisped a little in his excitement; in his face was honest, fighting anger.

"Courtier, writer," mocked Käthe. "You can't impress me with your hair-splitting. You've committed a breach of confidence, you've done something shabby, you can't argue that away. And, anyway, you only attacked him because I'm his friend. Otherwise he'd have been much too small for you; you're so revoltingly arrogant."

"I'm sorry," he answered, with rising bitterness, "that you've become involved with him, that's true. And it's also true that your Oscar Lautensack isn't a very worthy object. I attacked him because the scoundrels around him are using his miserable accomplishments for a lot of rotten political chicanery, and because he lets himself be used for it. He's no ordinary charlatan, your Oscar Lautensack, he's dangerous. He's got to be denounced. He's got to be crushed. And I'm the man who has to do it."

THEY faced each other with eyes full of hate. That there was a kernel of truth in Paul's unrestrained denunciation enraged Käthe twice as much. She would not have Oscar besmirched and debased. She would not let Oscar be taken from her. Through him she had felt what greatness was—inspiration, trance, exaltation.

"So you just throw mud at him for objective reasons?" she returned, and her crisp voice was tense with indignation. "You say that to my face? You dare to?"

"Yes," he said to her face, and again, "yes." True, he had wanted to rid her of those maggots, that, too, but that hadn't been his most important reason. "I want to annihilate him because he's a danger to all," he said, less loudly now, but there was unbridled fierceness in his gaunt visage.

And she, all revulsion and furious contempt, answered, "That was your best point: that up to now, you at least didn't lie. But now you're lying, too." And working herself up, with a little rush, she declared, "There's no sense in my living here any more. I belong with him, just so you know it. I don't belong with you. You're too"—she wanted to say "too Jewish," but she said, "too different," after an infinitesimal pause.

She was pained even by her modified words. She hoped that he had not understood her whole ugly meaning. She hoped that he would answer passionately and unjustly. Then she would have felt easier.

But, of course, he understood the ugly meaning of her words, and it did not occur to him to answer passionately and unjustly. Instead, all his anger had suddenly evaporated; another Paul Cramer, the thoughtful one, had become master. Slowly, dragging his feet a little, he went over to the table; he looked strangely aged and wise; mechanically he picked up a spoon, looked at it, and in a heavy, reflective voice he said: "Nietzsche once in a similar case wrote to his sister: 'Poor Lama'—when he was especially fond of her he called her Lama—'poor Lama, now you've sunk to anti-Semitism.'" And still looking at the spoon, he said, "It's a pity," and added, "Poor Käthe!"

She went wearily toward the door. "Goodby, Paul," she said.

"You want to go today?" he asked. "Yes, I'll pack and go now," she said.

And he, the spoon still in his hand, repeated again: "A pity. A great pity."

Two days later, after much inner vacillation, Paul wrote a new popular article against Oscar Lautensack. He wrote with

skill, with hatred, with poisonous calculation. He wooed the masses with the same means as his opponent. Oh, Paul Cramer could be coarse and effective if he wanted to. And now he did want to. He pained in all its stench the glittering cesspool that was Oscar Lautensack's world. He did not limit himself to discreet hints, but gave exact details, gave figures. He described Baroness Trettnow's salon with its menagerie of snobs, adventurers, careerist politicians and mercenaries; he described the office of the Society for Dissemination of German World Philosophy. He named the sums which were tracted from the patients there as fees Oscar's consultations. He showed how profitably things from the other world could be materialized in the form of a bank account. No, this time Paul Cramer was by no means dignified; he paid his opponent in the same coin; and as Oscar Lautensack had called up the dead captain Brittlings, so Paul resurrected the murder charge against Hannsjörg. He pointed with emphasis to the played in Lautensack's manifestations the good, old, honest magician Cagliostro. With complete frankness he called them by their right names, he called a spade a spade and Oscar Lautensack an avid reerist, a swindler and a charlatan, dangerous through his political connections.

A great number of newspapers printed the article. A renewed wild clamor arose around the clairvoyant.

Oscar did not know what line to take. He was flattered that he was represented as a man of power: on the other hand there were digs there that rankled, through that were hard to parry. How should he parry them?

Hannsjörg calmed him. Like all International Socialist leaders he had a profound contempt for the masses. What the newspapers wrote about one was unimportant; he thought; the essential thing was they wrote about one. The only effect of the attacks was that the sensation about Oscar had been heightened, and from whole uproar the readers would remember only the name Lautensack. One must let oneself be provoked; one must on account go into details. To ignore it completely—that was the solution.

This advice suited Oscar exactly. He longed-for summer lay before him; he had let Alois go to his beloved Munich and had taken a vacation himself. He did not want to fight, he wanted to enjoy in these summer months he wanted last to pocket the benefits he had earned by his prolonged, hard efforts. So he got Paul Cramer's attacks and filled summer with a wild pursuit of pleasures.

BOTH Hildegard Trettnow and Kadereit had country houses in the vicinity—Hildegard in the Mecklenburg district, Ilse in Cladow—and contrary to their usual custom, both women were spending the hot season near Berlin; his sake, Oscar flattered himself. He had frequent visits, now to one, now to the other, and drove about wildly here there, from one friend to the next.

He hurried the shipbuilding firm was constructing his yacht; it was finished in a very short time; he drove every other day to see how the work going.

The way to the shipyard led past Phienburg. He often stopped there walked about, mentally elaborating plans for the remodeling.

The summer was again full of political events. Once more the cabinet had fallen. Once more they were in the midst of an electoral battle, into which the Nazis thrown themselves with enthusiasm. With the same certainty with which he prophesied a defeat in the presidential campaign, Oscar now prophesied a victory in the Reichstag elections.

Once during this period he met

Führer. To him also he predicted with fervent conviction that the elections would result in an overwhelming triumph, exceeding all expectations. Hitler answered with satisfaction that he, too, was convinced that the wave of the movement was again rising mightily.

It was this conversation with Hitler and the conviction that he would not have leg to wait for the founding of the Academy of Occult Sciences, which now caused Oscar to tackle seriously the remodeling of Sophienburg.

He had one last interview with Sanders the architect. The latter resisted violently. He was known for his bluntness and he told Oscar flatly that what he wanted to do for himself would look like an occult ink pile and that it was too bad to spoil the noble, simple façade of the house with the claptrap Oscar wanted to set up behind it.

But Oscar remained firm. "If you aren't too much, you're too little," he declared, and, "What I visualize, my dear Sanders," he admitted, "may be barbaric. But it is the barbaric grandeur of Richard Wagner. Please understand me," he urged. "The Fuehrer has promised me an academy of occult sciences. The house of the president of this academy must be something representative, a symbol. Just in the true seer, fierce and magnificent visions are hidden behind a composed expression, so the great battle between the Apollonian and Dionysian forces shall rage behind the calm façade of Sophienburg." "Applesauce," said Sanders. "I build obediently, or I don't build at all."

Oscar was about to put on his Roman manner. But he had to have Sanders. Kingsor's magic palace could only be a success if Sanders built it. So he begged and implored him, he spoke about the Fuehrer's enormous building projects, he flattered and he threatened, and finally he succeeded in persuading the architect. Suddenly the latter declared he was ready to be on the job, and that seemed to Oscar the least of his triumphs.

TWO days before the elections Ilse Kadereit called up from her country house in Cladow. "Tell me, Oscar," she asked, "is this going to be one of our usual unimportant victories tomorrow, or a great, a real one?"

"It will be an enormous, overwhelming triumph with decided consequences," Oscar answered.

"Are you perfectly sure?" she asked in mocking, young girl's voice.

"Our victory," he said impetuously, "is as certain as my admiration for you."

"All right," she said, "then I'll make you a wager. If it does turn out to be that kind of victory, you'll get my black pearl you once admired so much. If not, then I'll get the opal from your bowl."

Oscar was almost frightened. Was this one of her jokes? Her black pearl was extraordinarily valuable; she was offering him an enormous present. He could not quite understand her. Did she, then, love him?

"I can't accept that," he said uncertainly. "Of course you can," said Ilse, "and you'll have a stud for your dress shirt made from it."

"I am grieved," he said, "that you still don't believe in me."

"I believe and I don't believe," said Ilse, and this time it was her bird voice that came over the wire. "I don't believe—that's why I made the bet with you; and I do believe—that's why I'll invite guests this very day for the evening of the election, to celebrate the victory. Of course, you're coming, too."

"With pleasure," he answered. "And the wager stands," she said, concluding their conversation. "I'm already looking forward to your opal."

The black pearl. Ilse. Sophienburg. The elections. The academy. Possessions. Fame. Power. Oscar's dreams came true so fast that he was almost dizzy.

THEN came the day of the elections. Oscar's program for that day led him to expect only pleasant things. For the forenoon he had appointments with Sanders the architect and Posener the jeweler. In the afternoon he intended to drive out to Spandu with little Alma, eat lunch there, and inspect his yacht Sea Gull, which was practically finished. Then in the evening he would drive to Cladow, to Ilse's.

Yet in the course of the forenoon as he was coming home from voting, he was suddenly overcome without cause by a paralyzing depression. Everything and everyone was repugnant to him. He was filled with a wild, sinister fit of misanthropy. He did not even cancel his appointments with Sanders and Posener; he gave orders that the gentlemen were simply not to be admitted.

Petermann the secretary stole in. In his blotting-paper voice he announced that Herr Hannsjörg Lautensack had called up; the election returns that had come in were favorable beyond expectation.

"And you disturb me for that?" Oscar barked at him. He uttered a snort of grim scorn. Yes, they were coming in, the treasures of this world, they were coming in, in shoals. So now he had the pearl. That was to say, he didn't have it yet. He had to go and get it. He had to pay for it. Probably she'd make a fool of him, poke fun at him. Probably she'd want him to do his little act. He didn't want to. He wasn't a dog that gives his paw before he gets his lump of sugar.

"Call up the Kadereits," he commanded Petermann, "and tell them I'm not coming this evening."

Petermann, well trained though he was,

# DON'T BRUSH FALSE TEETH WITH MAKESHIFT CLEANERS

## DON'T DO THIS

TOOTHPASTES, TOOTH POWDERS, soap, household cleansers, are not intended for dental plates. Dental plate materials are softer and more easily worn down than natural teeth. Many makeshift cleaners are *abrasive*,

wear down the important "fitting ridges," may ruin costly dentures.

In addition, continued use of these makeshift cleaners scratches dental plates, actually causing film and stains to collect faster, cling tighter.

## DO THIS!

### NO BRUSHING... NO SCOURING...

Do this daily: put a level teaspoonful POLIDENT in ½ glass of luke warm water. Stir briskly. Place plate or bridge in this solution for 15 minutes, or longer—over night if convenient. Rinse well—and it's ready to use!

"Now you see that line I just drew? Well, as it just so happens it is the equator"

COLLIER'S

GARDNER REA

### Plate Wearers Often Worst Breath Offenders

The dark film that collects on plates, bridges, soaks up odors and impurities like a sponge. Almost always it results in "Denture Breath"—probably the most offensive breath odor. You won't know if you have it—but *others will!* Yet POLIDENT used regularly, dissolves film—leaves plates odor-free and sweet. Millions call Polident a blessing.

# POLIDENT

The Safe Modern Way to Clean Plates and Bridges

## PLAY SAFE—USE POLIDENT

Soaking plates and bridges in Polident regularly, *dissolves* ugly stains and cleans those hard-to-reach corners and crevices without the dangers of brushing; *maintains* the original natural appearance. Recommended by many leading dentists and approved by leading makers of modern denture materials.

ONLY 30¢ AT ALL DRUG STORES

Long-lasting 3 oz. size—30¢; 7 oz.—60¢, at all drug, department and variety stores. Costs less than a penny a day.

glanced up in astonishment. "May I give a reason?" he asked.

"If I'd wanted to give a reason," said Oscar roughly, "I'd have told you already."

The secretary, standing there humbly, shot a malicious little glance at Oscar's back. Then he withdrew. "Stupid fellow, stupid," Oscar cursed after him, "slimy scoundrel." Yet he was not yet rid of Petermann. Instead, after a few minutes, the secretary returned with faint but visible malicious glee. "Frau Dr. Kadereit wishes to speak to Herr Lautensack himself," he reported.

"Say I'm sick," Oscar ordered him, enraged. "Or—no," he corrected himself, "I'll have to attend to her myself."

At the telephone he said simply, crossly and decidedly, "Unfortunately I cannot come this evening." He expected her to urge him. But she did nothing of the sort.

She just said, "So?" and after a short pause, in her usual mocking tone: "And what excuse have you thought up for yourself? Aren't the elections going according to prophecy?"

"The elections are going even better than expected," he replied, flaring up. "If I don't come this evening," he went on insolently, "then it's simply my inner voice that's keeping me away. I don't want to; you're quite right."

AGAIN there was a very short pause, then, with particular amiability, she replied: "Well, of course, that's a reason one can't dispute."

Inwardly he had to admit that her easy irony showed to advantage against his clumsy Deggenburg incivility. She meanwhile, still very lightly and amiably, went on, "Well, then, till another time. It's too bad you don't want to come and get your pearl yourself. I'll just send it to you," and she hung up.

He sat at his end of the line, slightly dashed. His heart had swelled as he told that high and mighty lady a thing or two. But now, immediately afterward, his pleasure in his rebellion evaporated. She had been too amiable. She was a powerful woman; Hannsjörg had dinned that into him often enough: he had offended her, and she wouldn't swallow that, and the whole business would not end well. "The queen beats the knave," his father had always said in such cases. Perhaps it would be wiser to eat humble pie, to call her up, to explain that the whole thing had been a mistake, a joke, and, of course, he was coming.

Then he decided he wouldn't. It was an inherited humility in the pressure of high society that was stirring in him. He was not like his father, who felt flattered if he received an invitation from Herr Kommerzienrat Ehrenthal.

Peevish and morose, he sat around in his apartment all day, at odds with himself and the world. Late in the evening, Petermann the secretary came slinking in once more. "Excuse me for disturbing you," he apologized, "but I saw your light was still on. And I just had to tell you the results of the election have come in. It's a much greater victory than we expected. This Reichstag will have 586 seats and we have 230 of them. The runners-up, the Socialists, have only 133. It's a colossal, unprecedented victory."

"Thanks," said Oscar. It seems we have the pearl, he thought. High card wins!

ILSE KADEREIT sat on the terrace of her country house in Cladow with a volume of Proust. It was hot. From the terrace she could look across the little lake into a friendly unpretentious Brandenburg landscape. Ilse Kadereit loved the summer and heat, she loved Proust, she loved to have no company but her own from time to time. But today she was not enjoying any of these things. She forced herself to read; but after a few minutes she let her Proust fall again and with annoy-

ance threw back the pale brown head. She was full of unrest and anger. She was dissatisfied with herself.

And yet everything was settled. And the fact that Oscar wouldn't catch on for a while, that was really the best part of the joke. She herself would not be able to tell the two pearls apart, the genuine one in the safe and the false one that Oscar had admired. Let him be happy with the false one.

Had she really been happy with the false Oscar. She had known from the beginning what there was to him, and what there was not. She had told him right to his face: "What I like about you is your stupid, brutal hands and not your stupid distinguished face."

He had let her say that to him, that and a thousand other insolent, sharp things. He had counted on her paying him in the end for the amusement he had afforded her. That was why he had suffered it and controlled himself. But at the last he had not been able to tame his inborn provincial impudence and unmannerliness.

She always paid her debts. She had been willing to pay him, too, to give him the pearl. But he had not fulfilled his part of the bargain. She enjoyed imagining what a face he would make when he found out that the pearl was false. False as the deep, demonic looks with which he had gazed at her.

The joke with the pearl wasn't bad. But it wasn't enough. The fellow had been too impertinent. For his sake she was sitting here in Cladow instead of in Venice or in Ostend, and he had as much as said shamelessly: "I'm not coming to your house, don't feel like it, it bores me."

What was the matter with her anyway that this Oscar's rudeness should upset her so? She had always looked upon him as the court jester, never as a lover. She had shown him that. There was an understanding on that point.

Obviously there was not an understanding on that point. He had rebelled, had the court jester. That was what rankled so—the rebellion, the mutiny.

She bore part of the responsibility for their having become so deeply involved with the Nazis—her husband and the others—for having hired the bandits to dispose of the Reds. Perhaps that was a bad error. We think we're playing with them and they're playing with us. One can see it in this Oscar; as soon as they think they're on top they slap us in the face.

We'll have to use tougher means than the joke with the pearl to show Oscar that we're still on top.

No, that business with the pearl was not enough. She must get at him with something else. And she knew with what.

Yes, she knew it, and she had decided she had a plan, she was satisfied. It was a beautiful, hot day, the kind she liked. Above the lake the air glittered with the heat; the buzzing swarm of gnats danced in the sun. Ilse turned back to her volume of Proust, and now she read with interest and enjoyment. . . .

THE next day, in a conversation with Fritz Kadereit, she said casually: "I only your Nazis weren't so impossible in questions of taste. Now that you've taken up with them you shouldn't be so tolerant of certain esthetic errors."

They were sitting at dinner on the terrace. With his shrewd, sleepy eyes, Fritz Kadereit looked cautiously across at his wife. Your Nazis? Now what was coming? One could never know with Ilse whether it was something unpleasant or enjoyable. "I'm slow in catching on again, my dear," he said amiably. "It's probably the heat. Won't you express yourself a little more clearly?"

"Well, for example," she answered with unaccustomed languor, "there are those violent attacks on our Oscar in the Reich press. They aren't vague; they go into de-

It seems to me that it's no help to the prestige of the Party if a prominent member continually lets himself be slandered as an ordinary swindler. It seems to me he should defend himself."

Fritz Kadereit raised his wineglass, which was chilled and faintly bedewed, and intently eyed the wine, a Moselle, sparkling and greenish yellow in the sun-faded glass. Then, still very slowly, he drank. He wanted to gain time, to think over his answer. Inwardly he was smiling. What was coming seemed to be something pleasant.

Fritz Kadereit loved Ilse. He did not pretend to himself that he did not suffer from her love affairs. He had understood that Oscar's popular romanticism had had no effect on her—sometimes he called her a little snob; but it rankled that she had looked out this Lautensack in particular, whom he had watched with growing anxiety as he became more and more deeply engaged in her game. Now he noted with relief that she wanted to take the impudent blow down a peg. The affair seemed to be approaching its end.

He must not agree with her at once; it was wiser to contradict her carefully. "Do you really think it's necessary, my dear," he asked, just as phlegmatically as she, "to say anything about these attacks?"

He answered exactly the way he wanted it to. "I've always told you," she lied coolly and naively, "that you make too much of our Oscar. He's amusing, certainly, but he's a heavy load for the Party to carry. Or what do you think?"

Fritz Kadereit suppressed the beginnings of a smile. "You know, Ilse," he answered, "it's said of one of our kind that he's a swindler, a rascal, for reasons which may be water or not, we think it necessary to go back. That's how we were brought up. But these people, these Hitlers and Lautensacks, they belong, after all, to a different milieu. They just haven't any feeling for decency and dignity. I don't know whether our Herr Lautensack feels it an insult when he's called a swindler." These were adroitly phrased words, and Ilse reacted as he wished. "It's not a question of Oscar's opinions," she said in a moment's reflection, and looked full in the face. "It's a question of the Party behind which stands Fritz Kadereit. We can't let these calumnies go unanswered, for our sakes." These were uncommonly decided words for Ilse.

For our sakes, thought Dr. Kadereit, that may be so. But again he swallowed his smile. "All right," he replied, and obligingly, with his manner of a good-natured bear, he promised her: "Since you think it's the thing to do, I'll take the necessary steps to get things going."

DR. FRITZ KADEREIT gave the Party ready money and had presented some of its leaders with shares in his business concerns. He was a man whose word was listened to, and for whom one was glad to do little favors.

So, shortly after the Kadereit couple's conversation, Manfred Proell said to Hannsjörg, "Listen, a thick skin is a good thing, but it mustn't be too thick." He had laid his soft, fleshy hand on the other's shoulder, and Hannsjörg noticed at once that this geniality boded no good.

"It pleases you to speak darkly, Comrade," he joked. "I'm not my brother; I can't see in the dark."

"It's just your brother I'm talking about," answered Proell. "He's the man with the thick skin. We've been sent newspaper clippings, a whole bunch of them; you know about that, of course. They call him a charlatan, a swindler. There are people who count it against him that he stands for it."

Hannsjörg was dismayed. Now whom had Oscar been antagonizing? "The Reds just want to make a scandal," he said. "I myself advised Oscar to lie low."

"I know you have sound common sense," Proell admitted amiably. "But in your brother's case, unfortunately, higher powers demand that we cast aside the advice of sound common sense."

"May one ask what is the name of these higher powers?" inquired Hannsjörg.

"Their name is Fritz Kadereit," replied Proell.

"You really mean, Manfred," asked Hannsjörg, uncomfortably, "that we have to sue for libel?"

"I'm afraid," answered Proell, "that you'll not be able to get around it. A few perjuries will have to be committed; you owe that to the honor of the Party. But perhaps," he suggested, "your worthy brother will get in touch with Ilse Kadereit directly."

From the very beginning of his next meeting with Oscar, Hannsjörg was sharp and grim. Without beating about the bush he informed him that Dr. Kadereit was astonished that such a prominent party member as Oscar Lautensack should let the aspersions of the Red press go unanswered. The Party shared this surprise. It wished Oscar to clean up this affair.

OSCAR felt that something unpleasant was brewing; he did not perceive the connections. Of course, he thought of that unhappy telephone conversation with Ilse. But that was all straightened out again; mild and dark, the black pearl gleamed in his dress shirt. Just what did Hannsjörg want?

He assumed his Roman expression. "Clean up the affair?" he asked with raised eyebrows. "There's nothing to clean up. Oscar Lautensack isn't going to brawl with that crowd. You yourself said that was the only proper course."

"That was the only proper course," replied Hannsjörg and sharply stressed the "was." "But, meanwhile, you've obviously made some other mistake." And since Oscar still did not seem to understand him rightly, he went on: "I've told you often enough you can't treat Trettnow or even Kadereit like your Ali or Petermann or me. That just won't do. Dr. Kadereit is the man who has the money, and he who pays the piper calls the tune."

Oscar sat huddled up, overwhelmed with dismay. "The queen beats the knave," he had said to himself warningly. But how could this be? After all, she had given him the pearl. To be sure, he had not seen Ilse since that stupid conversation; somehow it had never worked out; never when he had wanted to come, had she had time. But she had given plausible reasons, he'd had telephone conversations with her three or four times, and she had been awfully friendly. There had been a little mocking inflection, that was true, but she always had that.

Yet in his secret heart, while he considered all this, he knew that Hannsjörg was right; actually he had known all along, ever since that stupid conversation, that the affair would not end well.

"I wouldn't think of going to court," he said decidedly. "I'm not going to sue."

Hannsjörg forced himself to be calm and took a puff at his cigarette. "You are uncommonly slow on the uptake," he replied. "The Party has decided that you are going to sue. It's not advice, it's an order."

Oscar saw how hopelessly he was encircled. Hannsjörg, a slight figure sitting in the huge armchair, watched him pacing up and down grinding his teeth.

"I'm not going to court," Oscar broke out again. "I'm no fool."

"Yes, you are a fool," answered Hannsjörg, "and a hundred per cent one, too."

Exhausted, Oscar let himself drop into a chair. He sat dully in his great, flowing purple dressing gown in the middle of the gorgeous library, in front of the old Flemish tapestry.

(To be continued next week)

## BILL, THE PLATFORM MAN

It is 4 minutes to midnight—11:56 P.M.—in a Railway Express terminal. The man is a Railway Express platform man, one of many thousands stationed around the country. The package is a shipment of medical instruments. The destination—a military secret.

The package might have been some other type of war material or a commercial shipment to some factory which must "keep going". It might have been . . . anything.

To Bill, the platform man, and to any other of the thousands of employes who work for Railway Express, their job is to keep things moving so that trains and vehicles may maintain their ceaseless deliveries to the four corners of the nation.

NATION-WIDE RAIL-AIR SERVICE

*"I'm going your way, Soldier!"*

## In uniform or in "civvies" their goal is the same — and Greyhound speeds the war job of both

It takes many men in uniform *behind the lines* to keep one soldier *fighting at the front*. It takes a whole nation working at top-speed to keep all that vast force fed, clothed, equipped, financially supported.

This whole giant effort requires transportation on a scale never approached in history—*especially in the movement of manpower by motor bus, to the tune of three-quarters of a billion passengers in a single year!*

The man with the kit of precision tools must get to a bomber plant served only by motor bus—the non-com from the air corps is checking a new plane at the same plant. The girl who works at the arsenal—the WAAC rejoining her unit—the selectee headed

for an induction center—the mother visiting her son in camp—the businessman, the farmer, the nurse, the teacher—all have essential places in wartime America.

Greyhound is proud to carry millions like these—determined to keep its fleet of buses fully in service for America, in spite of severe wartime restrictions.

All of you have taken occasional discomfort like good soldiers—responding willingly to suggestions for making the most patriotic use of wartime travel. *Thank you—please keep it up!* And when Victory is won, look to Greyhound for brand-new standards of highway travel comfort, convenience, scenic enjoyment. They're coming, sure as sunrise!

### TO KEEP WARTIME TRANSPORTATION SERVING AT TOP EFFICIENCY:

*It is best to plan necessary trips for the less-crowded Spring months—and for midweek days. Whenever possible, avoid travel during the crowded midsummer months, on week-ends, and on holidays.*

# GREYHOUND

In the subway on the way to work, Mr. Grayson sat with his paper in his lap unread and thought about Mike—the hero

ON THE morning that Mike became an American hero, the telegram arrived before Mr. Grayson was away. He had just turned over for those last precious ten minutes when his wife, who had got up to make breakfast, came stumbling through the door. He saw her waving a piece of paper, but she was far too excited for him to understand her.

Grayson finally managed to get up. It was from Mike and had been sent east from San Francisco. GOT OFF FOR SKY STRIKE. ALL WELL. NOT FOR JAPS, it said.

Grayson got out of bed slowly. "I wonder what he really did," he said. His wife didn't seem to hear. "It's wonderful," she said. "It's so wonderful." He spoke dreamily and stared out the window. "I can't wait to tell Mrs. Mol," she added.

On the subway on the way to work, Mr. Grayson felt as he had never felt before. No longer was he hiding behind his newspaper, sunk in the gray obscurity of the city car, a pudgy little man with his hands gobbled up the headlines. He sat there with his paper folded in his lap, and thought about Mike—the

THE lobby of the tall downtown building where the insurance firm had its offices, Mr. Grayson barked "Good morning" to the cigarette vender. The man looked after him. To the elevator operator Grayson hurled the same voluble greeting. When the car stopped at the twentieth floor, Mr. Grayson scurried down the hall, making his leather heels click. He walked briskly to his desk and hung his coat and hat on the rack. One of the stenographers looked up. "Feeling better this morning, Mr. G.," she said.

"Fine, fine and dandy," Mr. Grayson said. "Never felt better in my life."

Somehow he didn't want to say anything about Mike yet. It would be better to be modest. He sat down, opening his mail.

Mr. Grayson had been with the firm twenty-five years. There had been a time, not long ago, when he had done pretty well as a salesman. Nowadays it was harder. The younger men called him "Old Man Grayson." He had heard them once talking in the washroom.

He went over the desk, slicing open the letters with a paper cutter, Mr. Grayson found that the news of Mike made his thoughts swing backward, reminding him of his own obscure position. He discovered he was losing his feeling of elation. At a time he stopped thinking, but the feeling wasn't quite the same.

The next hour went slowly. He made a few phone calls and worked on some letters. Suddenly he looked up and saw Mr. Roberts, the vice-president, bearing down on him with a wide smile. "Grayson," Mr. Roberts boomed, "this is wonderful. My sincerest congratulations!"

The vice-president was carrying a newspaper, dangling it as he spoke.

Mr. Grayson lifted his eyes to meet Mr. Roberts'. "Why, I didn't know . . ." he began. "I didn't think it was . . ." His voice died and he had to stop to clear his throat.

"You mean you haven't seen it?" Mr. Roberts boomed again. "You haven't even read about your son becoming a hero?"

Mr. Grayson started again. "Why," he said, "we had a telegram this morning, my wife and I, but I had no idea . . ."

Mr. Roberts threw back his head and laughed loudly. By now a cluster of employees had gathered around Mr. Grayson's desk. They were laughing because Mr. Roberts was laughing.

## A Hero in the Family

By Robert Shaplen

ILLUSTRATED BY WINFIELD HOSKINS

A SHORT  
SHORT STORY  
COMPLETE  
ON THIS PAGE

Mr. Roberts put the paper down on the desk and flattened it. There was a picture of the commanding general pinning the decoration on Mike's breast. The caption read: "Lieutenant Michael Grayson receives Distinguished Flying Cross at South Pacific base. In announcing the award the War Department said Grayson shot down three Japanese Zero planes when attacked in midair by a formation of seven enemy fliers. He is the son of Mr. and Mrs. Thomas Grayson, of 13 Westmore Street, Brooklyn."

The employees leaned over the desk and stared. There were audible murmurings of approval. Someone was pounding Mr. Grayson's back and someone else was pumping his hand. He felt there were tears in his eyes but he didn't dare take off his glasses. He heard a man's voice say, "You know, Mr. G., he looks just like you," and then everyone was staring down at the paper all over again and muttering agreement. A moment later they straightened up. Mr. Simpson, the president, was coming toward the desk. Mr. Grayson felt his heart go faster.

Mr. Simpson spoke in a low voice and everything was suddenly very solemn and serious. He shook Mr. Grayson's hand and said something about the firm being proud of such a father. Mr. Grayson was having a hard time by now with the tears, but so were some of the stenographers. He wasn't fully aware of what happened in the next few moments except that he remem-

bered Mr. Simpson asking him to step into the front office later on.

Then it got quieter again, although every once in a while someone would pass his desk and slap him on the back. Mr. Grayson went out to lunch with one of the younger men. He put off going to Mr. Simpson's office until about four o'clock because somehow he was scared. When he went into the small reception room fronting the glass-enclosed chamber the secretary smiled at him and said she had heard about the wonderful news. Mr. Grayson thanked her and sat down to wait. Presently she told him to go in.

MR. SIMPSON was seated behind the broad shiny desk, writing. When he looked up, Mr. Grayson felt like closing his own eyes tight. He was sure Mr. S. was going to ask him to retire.

"Oh, yes, Grayson," Mr. Simpson said, "I'm glad you've come. Grayson, I've got a little surprise for you. This is a fitting day to tell you." He paused a moment and looked out the window. "I wish," he said, his voice lower, "I wish I had a son as well as two daughters." He turned back and his voice became businesslike again. "Beginning next week, Grayson," he said, "you will be assistant director of the research department here. There will be a seven-dollar raise for you."

Mr. Simpson got out of his chair and came over and took Mr. Grayson's arm. Mr. Grayson had trouble with the words

again. They just wouldn't come out the way he wanted them to, but he felt that Mr. Simpson understood.

It was nearly six when Mr. Grayson left the office. He was one of the last to go. There had been so much time wasted during the day he thought he should get some letters done first. The air was sharp and clean when it hit him in the face on the other end of the big revolving door. Suddenly he decided to walk across the bridge. He hadn't done that in a long time and there was so much to think about. He ducked through the traffic, a small, darting figure, running through the twilight. On the bridge he slowed up. It was growing dark now, and the sky behind the tall buildings to the rear was a smoky gray. He walked along slowly and once he stopped at the rail. There was a plane cutting across the harbor, coming toward him. Mr. Grayson stared at it, and it made him feel strong and proud, looking up at what man had made. It reminded him sharply of Mike, swooping and diving through the clouds, fighting. Mr. Grayson almost involuntarily raised his hand and waved to the plane above him.

Then he put his collar up and hurried on. He was still thinking of Mike, remembering the day, long ago, when he and his wife had gone to the orphanage to pick him up when he was less than a year old, and the way the nurse had smiled when she handed him over, wrapped in the small blue blanket.

## EVER FACE A FIRING SQUAD?

**T**AKE A good long look. This is what a condemned man...or woman...sees at twenty feet. No one has ever come back to describe that last moment before the scene is suddenly blacked out with a rattle of fire and a burst of lead.

But even a brave man or a courageous woman facing such a scene must hope feverishly that this is all just a bad dream from which there will be an awakening...a vision from a remembered movie in which someone will come, will come, in time. But no one comes.

Thousands...hundreds of thousands...of human beings, like yourself, have had just such a last glimpse of life during the past few years. And they, too, have hoped it was a dream. But it wasn't.

How far removed do you think *you* are from play-

ing the star part in such a performance as this? Two years, three years, maybe four years...if the Japs and Nazis win.

And don't think that you can talk yourself out of it if the time comes. Don't think that you can turn coat; that begging for mercy on bended knees will spare you; that promising to be good, to cooperate, will help. Some patriot in your neighborhood will kill one of their officers in the night, and the next day you will be rounded up with nine or nineteen or ninety-nine others...to be shot.

This is something for all of us to think of...to dream of while we can still awaken to the clean air of freedom.

It is something to make all of us resolve that all our waking effort will be bent to the one job of

winning this war...that whatever we know we *can* do, we *will* do...and that whatever else we can *find* to do, we will also do.

For unless *all* of us put the winning of this war before everything else, a lot of eyes that now look on this page may face that same scene in reality.

Not somebody else's eyes. *Yours...*

# A Ship in Norfolk

Continued from page 50

was glad, getting out raincoats and umbrellas. "To go for the mail?" Davie was asked, but Di pressed her nose against the screen, because Evelyn's pet chicken, was out in the rain. The cat, with much more sense, was asleep on the back porch. However, the entire family, in raincoats, stood around the green tangle that was the door and found the bedraggled man, with lavender wings. Felicity alighted at the sight of it. A neighbor given it to Di, who had promptly given it to Evelyn, for an aunt vaguely associated with presents. Now, Evelyn had passed her first fluffy charm, but the color of heliotrope still dyed the ends of its wings. It was lovely walking in the rain. Felicity listened to it pattering against the window panes, with the unwilling realization that even the rain wasn't soft and warm as English rain. She wanted vaguely to make these unbidden comparisons . . . of a host who had given them kindness and welcome.

Y came to the village of the little seaside resort. A knot of people waited at the post office, which meant the mail was not yet up. Several spoke to the English girl and her charming, sun-kissed children, as they went into the

then, Felicity saw him, the tall of- tightly buckled raincoat, rain shield and trim white cap, standing at a dis- counter. His back was to her, but there was something in the shape of his front forward intently, the width of his shoulders in Navy blue, that was both strong and heart-tugging. . . . David's was like that, always thrust forward and listened. . . .

stood holding the hand of each child, staring at that familiar back. It couldn't be, of course. . . . It was absurd. Something of emotion or shock within seemed to flow down her arms and communicate itself to the small hands she held. The twins looked up at her wonder- fully as she whispered, "Why, that looks like Daddy!" and they gave a leap of excitement, away to run the length of the store, shouting: "Daddy!"

"Davie, Di! Come back this minute!" Felicity explored, hurrying after them.

He had seized the young officer by the knees, and he rocked for balance, turning a bewildered and strange face to her.

"We're sorry!" Felicity gasped, pulling the children away. A blush swept her face. "Not at all," he stammered. Then he said, "I thought retribution was at hand and my past catching up with me!" She could not smile, just stared at him in silent distress, because he wasn't and he couldn't be David. Then she turned back and hurried off, leaving the young American officer staring after her.

The blessed sound of English voices in Mrs. Daniels' living room, that afternoon made the color rush over Felicity's face, so that when the gray, bristling lieutenant colonel took her hand, he smiled with pleasure at so pretty a creature. Her complexion, her very fair coloring gave her a delicate fragile charm, and the blue dress made her eyes more violet than ever.

Then she realized, with fright, that she did not know what the colonel had said, un- hesitatingly inquiringly.

"I'm sorry," she stammered, "I didn't know you, Colonel, because I—I was listen- ing to your voice."

His eyes twinkled. "Homesick, eh? It's true you couldn't live at Norfolk. There's

a nice little English colony staying there."

She clasped her hands, tightly. "Oh, I want to, Colonel! I've heard that British ships come into Hampton Roads for over- hauling. You've just been there—are any ships in, now?"

His face went quite blank. "I couldn't say, my dear. I'm an army man and I know very little of the navy's business."

She withdrew to a wide window, as new arrivals claimed the colonel. She stared out at the sea . . . then at the cocktail table—and saw again that familiar back. At that instant the American officer of the market turned around. He came straight across the room to her. . . . "Hello! This is the second time you've looked startled at the sight of me. Is anything wrong?" He smiled in a friendly fashion.

He did not look at all like David at close range. He had a quick, alert face and

recovered. "Perhaps you'd like me to stand with my back to you?"

She smiled, cheered because she had told him. "That wouldn't help."

He remarked, "Yesterday, I felt so optimistic, I knew those children were your small brother and sister . . ."

She laughed, shaking her head. "Twins. Mine." She picked up her bag and gloves. "And, I must go back to them."

"So soon! . . . But, it's blowing a gale outside, and getting dark. Let me take you?"

She stopped, surprised. "I don't even know your name."

"That's easy. I'm Bill Markham, Lieu- tenant, junior grade. The captain will vouch for me . . . I think! And you're Felicity Fenwick."

"How on earth did you know?"

"I asked," he said, blandly. "I always

them, and Bill! walked back to the corner with her, as she scampered off home.

Felicity was waiting in the lighted door- way, when he returned.

"I came back to say good night."

They stood a moment in the small liv- ing room. She did not ask him to stay. She saw that he was looking at a picture on the table in a tooled-leather frame. . . . An officer in the Royal Navy. . . . David Fenwick's deep brown eyes looked back at Lieutenant Markham, steadily.

Just then, the bedroom door swung open and a tousle-headed boy stumbled sleepily across the room. ". . . you were gone, Mums! . . . I thought you were lost! . . ." And Davie wrapped his arms fearfully around her.

She hugged him. "Oh, darling, you'll catch cold. It was only a bad dream. . . . I'll never get lost from you! . . . Run back to bed, darling!"

He sagged sleepily against her, and Bill said quickly, "Let me help," and, stoop- ing, picked the child up in his arms and carried him swiftly into the dim room. But, when he put him in bed, Davie aroused and protested, "Wait! I forgot to fix my shoes." He leaned out and turned his small, scuffed shoes upside down.

"What's the idea?" Bill grinned, as he covered him up.

"Why, you know!" Davie was sur- prised, and wide awake now, ". . . so if bombs land near and break windows, lit- tle bits of glass won't fly in your shoes to cut your feet up!"

"I see," muttered Bill. He came out, his face grim. "Whew!" He stared at Felicity. "Even the kids! . . . It makes you sick."

"They're young," she said, composedly. "They'll forget."

THEY walked to the door, and he asked with frank curiosity, "How did you ever land in this little out-of-the-way spot?"

"Living is cheap here," she murmured, "and the climate is gentle."

"Wasn't it difficult getting passage to this country?"

"Very. But we were sponsored by an American friend of the Fenwicks." She hesitated, then added, "Perhaps we came on false pretenses. You see, when we landed, I found that the friend was the head of a lecture bureau, and intended for me to lecture to women's clubs . . . about bomb raids and such things." She shivered. "I couldn't! I simply couldn't speak of what had happened." She raised distressed eyes to his.

"I don't blame you!" He was indig- nant. "Exploiting you like that!"

"No. She didn't look upon it so. It was her business. She wasn't unkind when she saw it was quite impossible for me. But I had to come away. I couldn't trespass upon her generosity any longer. There was a chance of coming to Florida. So we did."

She stood wondering why she had told him so much. It must be his frank inter- est and sympathy. He made her feel help- less and dependent, as if she needed taking care of . . . she, who had made her own decisions for so long. It was a dangerous feeling.

"Good night, Lieutenant Markham." She held out her hand.

After he had gone, she thought: I'll never see him again. But the next morning, the twins rushed in with stalks of sugar cane, cut neatly into short lengths. "Bill!" had brought it, they said, and had shown them how to eat it. . . . Wasn't Bill nice, Mums? Felicity said mildly, that he was.

Later that week he dropped by with a message from the captain's wife. He de- livered it so carefully, and it was so un- important that Felicity guessed he had

## MR. FALA OF THE WHITE HOUSE

by ALAN FOSTER

COLLIER'S

"Irresponsible critics are a disturbing element!"

his eyes were a reckless blue, instead of steady and brown like David's. He had perfect teeth when he smiled, which he seemed to do a lot, perhaps to hide the stubbornness of his chin.

He went on gaily, "You're English, aren't you? Then we're allies. We've got a lend-lease pact."

"Does that mean I should talk to you?" She smiled, faintly.

"Absolutely. I'll lease you my voice and you lend me your ears! We'll get along famously. . . . May I get you a drink?"

She indicated her glass on the window sill, and then she said nothing more, because she couldn't. She was overwhelmed by that same frozen despair which had swept her the day before in the market, because he was so like, and so unlike David.

He studied her in silence. "This won't do! The American Navy must be slip- ping!" Then he asked, gently, "What is it? . . . I look like someone . . . ?"

"The back of your head looks exactly like my husband's," she blurted.

He blinked at the impact of this, then

ask the name of the prettiest girl in the room."

"Suppose you help me find our hostess," she said calmly.

Outside, as they walked through the early dark, he asked: "Who stays with your children?"

"A baby-sitter. I must hurry home so she can get her lessons. A group of high- school girls make spending money that way. A young neighbor is our baby-sitter tonight."

HE CHUCKLED a little at the absurd name. They bent before the wind, and the moon, struggling out between racing clouds, threw their long black shadows ahead of them.

He looked up. "Nice . . . we've got a moon."

"A bomber's moon," she said, absently, thinking how still it was, except for the beating of the wind and that the stillness held peace. She did not know he was look- ing at her very hard.

When they turned at her corner, the dark little street did not seem so lonely as usual. The "baby-sitter" was watching for

# YES! A farm-fresh Vegetable Dinner — only 20¢\* a portion!

1. Now, with the shortage of meat and fish, is the time to chin up to a marvelous Vegetable Dinner—by Birds Eye! Cost: about 20¢ per portion!\*

2. The Fixins: Farm-fresh Cut Corn, tender Baby Green Lima Beans, and French-sliced Green Beans—all easy-to-fix—plus a baked potato (supplied by you.)

3. The corn is milky, sugar-sweet! The Green Baby Limas are tender, plump little nippers—delicious! French-sliced Green Beans are really sensational!

4. These vegetables are Quick-Frozen within 4 hours! Freshness, flavor, nutrition are sealed in! These vegetables are waste-free, cleaned, and shelled—ready to cook!

5. Precious hours are thus saved for War Work! And because you buy them ALL in one department, featuring great variety, Birds Eye solves your shopping worries!

6. Remember! Only 20¢ a portion, allowing for the baked potato! COMPARE BIRDS EYE PRICES! See how much you'll save, for every ounce is eatable!

"Don't forget to remove the restaurant wrappers from the lump sugar before the guests arrive"

snatched it from a casual conversation as an excuse.

The twins followed him up on the porch.

"We have a daddy just like you," Dave declared. "I mean, like your clothes."

"I knew that the first time," Bill told them, grinning, "when you tackled me like the whole Notre Dame backfield."

The twins bent double with laughter, and hung on his words, their round red mouths slightly open. They liked his laughing voice, the bright blueness of his eyes.

"It's really amazing, the thundering effort I made for a legitimate reason to come!" he declared. "I practically forced that message from Mrs. Daniels, and didn't fool her in the least. And I can't understand why I'm so repressed! . . . If I were stationed anywhere else in the United States, and there was a very pretty person . . . married—unfortunately, for me!—well, I wouldn't let it bother me too much."

Felicity's voice was light: "Perhaps you feel noble because I'm English."

"And I'm jittery all the time," he worried on, his eyes twinkling, "unsure of myself! The odd part is that women have been known to find me attractive."

"I'm sure of it," Felicity said politely.

"And there are thousands of American girls just as blond," he marveled, "just as fair. Prettier, even. Why must it have been you?"

"It's not I!" She stood very straight and tried to look stern. "You're very gallant and American and feel terribly sorry for us. That's all! You know quite well there is some charming American girl you're in love with." She saw his face change slightly, and added quickly, "And have quarreled with."

HE LOOKED away and his mouth grew tight, and she knew she had guessed correctly.

"That has nothing to do with this," he said smoothly. "I never quarrel with our allies. That's not the Navy's policy."

He took her hand. It lay cool and quiet in his. It was the first time he had ever touched her, and it was like touching a Dresden statue. Cool and quiet, with no heart at all beating through her finger tips.

Her violet eyes dwelt in his with depths in them he could not read.

He sighed suddenly. "Well, I've got to shove off." Then he threatened, "But I'm coming back!"

He ran lightly down the steps and she watched his back—that tall, familiar back, which always made her heart stop a little. She went quickly into the house, and stood leaning against the wall. To her surprise, her knees were trembling.

However, Bill's comings and goings while short and spasmodic, made a difference in their life. He was someone to swat with, in his off-duty hours, and he had light hand with an omelet, Felicity four. He fixed the floor lamp that blinked, and once helped catch a bird which had fluttered down the chimney, scaring the two out of their wits. And he even made fourth at bridge, one night, at the captain's house. An easy, effortless companion through bright days which grew short and cooler.

NOW, in the early morning, mist swirled thick and gray, waist-deep the trees, wind-churned waves rushed deserted beaches, gulls flew inland. Winter was coming.

Then it happened, with quick footsteps on the path, up the front steps one night and Davie and Di running to see who was. . . "It's Bill, Mums," they shouted excitedly, "with presents!"

Bill smiled at her, as the twins tore open toys and candy. "It's not a new approach he declared, "it's really goodby. I've been ordered away. Sea duty."

A shadow crossed her face. So, she would take him, too.

"When are you going? And where she asked.

Incredibly, he answered, "To Norfolk Tomorrow."

Her face paled slowly. "Take me with you."

He did not move, although she could almost see him reel from the jolt. He answered, instantly. "Of course. I'll be delighted. Have you any preference as to trains or automobile? I don't think I have time to go through the countryside."

"Train," she said, her lips still white.

He took her hand and led her to the couch. "Let's get this straight, Felicity, I take it, it isn't a joke? . . . No, I don't think so. Well, then, why?" He kept his hands firmly in his, his face carefully blank. "Any sentimental attachment for me?"

She shook her head.

He sighed. "Just for the ride?"

"I've got to get to Norfolk, Bill. Ever where I go people mention it—the English colony there, British ships in port. The place has haunted me. It's where I should have gone at first."

He nodded. "But I ought to warn you Felicity, there's not a chance in a thousand of your husband's ship ever coming into Norfolk."

"I tell myself that, too. But I'd be the if it did. And then I could live near other English people, who speak of persons at places I know. And we have friends the service. They might have news David."

"So the Royal Navy still leads?" She looked at him gravely. "Do you think it possible for me to change myself from one kind of person into another?" "I—guess I was crazy! But it sounded like if you had. It was my fervent hope!" "Oh!" She withdrew her hands, sat up very straight. "I see. Of course. Then forget I asked. I must have been mad. Anyway, I couldn't repay you for a long time, and it's far too expensive." "Not for me and Uncle Sam! Remember our lend-lease pact? . . . No qualms, now. You're leaving for Norfolk with me, tomorrow night. Er . . . just name the conditions!" "It's not for me to make conditions, is it?" Quick color burned over his face. "That's not fair . . . you're putting me on the spot!" Then he laughed, recovering himself. "Why, usually, when a lady asks me to elope with her—" "Poor Bill! It won't be very romantic eloping with us. Remember the twins—nothing of Evelyn and Ink!" "Good Lord, four obstacles to hurdle!" She laughed with him. "Oh, we'll find the pets good homes, here. But seriously, Bill, think before you commit yourself. Commitments are hard to explain to—other women. You see, I'm thinking of that girl, somewhere, whom you've quarreled with." "Where do you get such stuff? Are you psychic, or something?" He looked astonished, nettled. "You know very well I don't tell you I'd quarreled with her." "There, you've admitted it! Please be serious. Don't ruin your chances of happiness, by this gallant idea of helping me." "Perhaps," he said, low, "this is my chance of happiness."

THEN, before she could speak, he turned swiftly and called to the children, "How'd you fellas like to go to Norfolk with me, tomorrow night, on the train?" Davie rushed over, his eyes shining. "On a real train? Where will we sleep?" Felicity leaned back carefully against the couch, as if she dared not move too suddenly or breathe too deeply, lest this smothering bubble she lived in break. "I'll get you a little room, if possible, for you and your mother," Bill said. "I know," Di cried, rapturously, "like a little house. We peeked in, on the other

train." Then she added, generously, "You can sleep there, too." Sudden, hysterical laughter crowded Felicity's throat at Bill's blank face. Joy was tearing at her control. They were going to Norfolk! Nothing mattered but that. "Oh, I wouldn't dream of crowding you," he said politely. "As a matter of fact—" "You mean, 'as a matter of fancy,' don't you?" she said, her eyes shining at him. They both laughed, in abrupt release.

IF FELICITY had any doubts, the following day, she thrust them away from her. She packed rapidly, stripping the shabby little house of her own few belongings. When they went for the mail, she told the real-estate agent that she was giving up the house. She left careful instructions at the post office for mail to be forwarded to her, in care of the British Consul, Norfolk. Just writing the name sent a surge of excitement through her. And she resolutely kept her thoughts away from Bill Markham and the advantage she was taking of his friendship.

The long day passed. Then it was supertime, and it seemed that a very short day had passed. The three of them were dressed in their traveling clothes, feeling queer and stiff and very formal.

When Bill came for them, he was formal, too. A brother officer was driving them to the train. He showed no surprise at their traveling arrangements. He thought it was nice for Bill to have company; Felicity murmured that it was nice for them to be assisted on their journey; Bill remarked that the twins would cheer up anybody. Amid such formalities, they made the train.

The twins were enchanted with the drawing room, and Bill helped stow luggage and tossed Davie into the upper berth to try it out. He left them being firmly put to bed, and sat outside in the car where the porter made up berths. Then Felicity joined him and they sat quietly talking amid the steady clatter of the train, the passing of passengers.

Felicity stared out through the darkened window, beyond her own transparent face, where shadows of trees and houses and street lights flickered by. It was as if she had left reality and was swept by a rushing wind to some unknown destination. Somewhere away, beyond knowl-

edge or wish or thought. It was a queer dream-like moment, empty and vague, as if there were no twins, no David. She tried to summon their merry faces, David's steady eyes, but there was nothing there, only the dark trees swinging by and the shadow of Bill's profile beyond hers.

"Please let me know the exact amount of our tickets," she said quickly, "so that I may repay you."

"Certainly," Bill said mildly. He was very quiet, as if he were tired.

"You've been very wonderful to your allies, Bill."

He did not smile back. Instead, he rose to his feet. "Here comes my porter now. I'd better tuck you in. I know you're tired."

They went to the drawing room. Di woke as the door opened. She held up her arms, sleepily. "I want to kiss Bill good night."

He came in and bent softly over her. He was tiptoeing to the door, when she said, surprised, "You forgot to kiss Mums good night."

Bill said, "So I did. . . . Good night, Felicity."

She stood swaying with the motion of the train. The dim light made her face look very pale.

Bill bent his head. "May I?"

She nodded.

He caught her shoulders, pressing her hard against him. When he kissed her, her hand went up and touched the back of his head.

He pushed her away, jerking down her arm. His hand was clenched around her wrist. "You closed your eyes and thought I was David, didn't you?"

"Please!" Her lips trembled.

His eyes burned into hers. "How could you? . . . When I love you so . . . !" He wrenched open the door. Because he was so angry, so bent on getting out of there, he did not hear her whisper, "I had to think of David. I was afraid not to . . ."

The door closed between them, and she was left staring in terror at its dark polished panels, where the white blur of her face was reflected. . . . A whole, dim, strange outline of herself was reflected, as if she were turning into another sort of person, after all.

THE windows of the apartment in Norfolk overlooked Willowby Bay, and beyond that, the gleam of Hampton Roads, where sometimes English boats came into dry dock for repairs. It was surprisingly wintry, the trees stripped and bare, the water cold and gray and desolate.

Felicity moved restlessly around, getting settled, unpacking. The British con-

## SMALL TALK FROM AUSTRALIA

IN COMIC strips, when a wandering American speaks with a native in a distant or primitive land he uses a combination of slang and Brooklynese which is supposed to be pidgin English. Actually, pidgin is of China Coast origin, and it doesn't sound like comic-strip talk. American troops are picking up pieces of it in the Southwest Pacific, but fundamentally it's not easy to master, and because it's a living language it changes constantly.

For instance, *balus* used to mean pigeon; now it means airplane. A *garamoot* is a native gong, and *musket* a firearm. Recently *Garamoot belong musket* was coined to describe a machine gun. *Lamp walkabout* is a portable kerosene lamp, which is not used as much now as a *shootlamp* (flashlight).

The written vocabulary for pidgin looks—and is—simple; the catch is to use the proper pronunciations and inflections which are based not on English but on tribal dialects. We can't be sure of the proper inflections on the words in the following typical pidgin sentence, but there it is, with a translation.

"Ear belong you 'e want 'im spell; me workim moulic, one time sugar. You savvy finish?" ("If you're tired listening I'll go off and make myself a slightly sweetened lemon drink. Do you understand?")

Several soldiers, just back from the battlefield, unanimously agreed that a bull session was in order and that they could reminisce much better if they had some beer. A Southerner in the group thought he knew where he could get a bottle or two and was elected to fetch it. Time passed—slowly—but eventually the Southerner returned with a bulky, newspaper-wrapped bundle. Triumph and supreme achievement showed in the smile on his face.

"Did you get the beer?" chorused his eager pals.

"Nope," he said. "Something bettah."

"Wine? Whisky?"

"Nope." His smile was even broader. "Watermelon."

An American warship came limping and listing into an Australian port with its superstructure damaged and gaping holes in the hull. It had been outnumbered in its engagement with a portion of the Japanese fleet, but it had fought hard enough to sink two enemy ships and to damage two others. The sailors, naturally proud of their achievement, wanted in some way to distinguish themselves from the crews of other ships. The problem was finally solved. Every man went out and bought and put on a pair of gold earrings.

Technical Sergeant Ira Kannard, originally from Oregon, was amazed when he received in Australia a birthday package that seemed to have been sent from the States just six days before. To add to his surprise, the package had been incorrectly addressed and had bounced around several camps before it reached him. While Kannard was marveling at this sort of delivery service he looked again at the postmark. The package had been sent a year previous, for his last birthday.

PVT. CHAS. D. PEARSON

sul had helped her find a place to live and meet the English colony. There was even a day school where the twins could go, leaving her free to find work.

But she had a let-down feeling. She was in Norfolk and nothing had happened. Had she actually expected to see the Sussex, gliding silently into port, as she came into the city? It was childish of her. Such things only happened in books.

It was the telephone that bothered her the most, she decided, as she wandered restlessly through the apartment. She never looked toward it, but it was there waiting and still, challenging her. Perhaps it was because she was remembering Bill's words when he said goodbye and left them

in the consul's care. . . .

"I won't see you again unless you send for me," his voice so impersonal, his eyes their most blazing, reckless blue. . . . "All you have to do is call me—if you want me—and I'll come."

She stared now at the phone as if it were some instrument of magic . . . black magic. Unbidden, she remembered the strength of his hands, his tenderness. . . . Hands strong enough to let her go. . . . The phone seemed to draw her across the room. To get away from it, she flung on her things and went out to walk for a long time down cold, strange streets.

Then one day something snapped inside her, like a string pulled too tight for too long a time. She walked straight over and picked up the phone. It was cold and black and heavy in her hand, and she spoke to someone, saying piteously, "It's been so ghastly lonely . . . for so long."

But no one answered, and she began to dial a number with cold fingers.

In the midst of this there was the scramble of feet on the stairs outside, the high clamor of children. They burst open the door . . . the twins, home from day school, their hands full of gaily crayoned papers . . . and mail!

"Look, Mums, what we found in the box. . . . A letter!"

Across the room, the small white square in Davie's mittened hand seemed to glow with a luminous quality.

Automatically, carefully, she put the phone down and stood breathing quickly as if she had been running. Running away, again . . . this time from herself.

The letter was from David, forwarded from Florida, ironically. She sat down because her knees would no longer hold her and tore open the envelope.

It was one of those V-letters, sent on microfilm. Its photographed copy in her

shaking hand did not seem quite real. David's hand had never touched this sheet of paper. But it was his writing—he still didn't cross his t's properly—and it was real, because David asked if she'd heard whether the strawberry plants had bloomed this year. Had anyone written her whether the évacué children from London were living in their house as they had planned?

She read the letter to the children. And now, all the loneliness was gone; she was herself again.

She sat for a long time, the letter on her knees, reading it over and over. Her arms were wrapped tightly around herself, as if she must hold something close within

her, warmth or joy, or her very heart which was beating in great, slow, full beats, as if it had just got around to living again.

Then, that night, when she came in carrying their supper in her arms, the twin staggering under bundles, there was Bill Markham waiting disconsolately on the top step in the dusky hall.

"Bill!" The twins dropped their bundles in delight.

He hugged them, looking at Felicity over the tops of their bobbing heads. "Had to come after all. I've only an hour before I leave—"

She interrupted: "I've heard from David!"

He stopped, dashed, then exclaimed "Why, that's fine, Felicity! How grand for you. What's the news? Did he say anything about an overdue leave?"

She shook her head, then said, con- tritely, "But you said *you* were going?"

"Yes. This is really goodbye." He began helping the twins with their bundles.

IN A FLURRY of excitement, they got the door unlocked and the twins, themselves, and all the bundles into the apartment. On the way to the kitchen, Bill murmured, "Our last moments together are always so domestic, Felicity."

She stooped and picked up a thin kitten. "Don't step on it!" She looked at him troubled. "We're going to miss you."

"Are you all settled and happy, Felicity?" Bill asked.

She nodded. "The letter . . ." she hesitated . . . "made me myself, again."

He glanced at his watch. "It's very odd," he said, with difficulty, "to leave a place or a person or a moment, and feel that never again will it figure in one's future."

"Now is so terribly important. Bill. There's no time to worry about any future." Then she said steadily, "But the girl of yours we talked of once. I can help thinking about her. . . . She might be crying, right now, about you—"

"Probably in some other fellow's arms," he said, harshly.

Felicity smiled, gently. "Well? . . . And you . . . ?"

He colored, painfully. "Felicity, do you think I'm a heel?"

"I think you are a very great gentleman," she said, softly, "and it would quite break my heart if I thought I had—spoiled things for you. . . . Write her, won't you?"

He began walking to the door. "If I will make you happier," he muttered.

She gave him her hand. "Thank you, Bill . . . for everything."

The children followed them to the door. He shook hands all around and they said goodbye, casually, and Felicity was painfully reminded of other goodbys. There had been so many partings in her life. And you never knew which goodbye was forever, until afterward.

WHEN the door closed, she went once to the wide window overlooking the bay, as if she must cling to it. Cling to that strip of water that gleamed under the quiet stars like dark, rippling velvet. All around them lay the dim city.

After a long while, the incessant ringing of the doorbell brought her to herself. The twins ran to open the door. Over their brown heads, she saw a messenger boy holding out a blue envelope . . . cablegram.

Somehow, she crossed the room. As she was suspended in timeless waiting until she signed the book, tore open the cable and read the words: "CHRISTMAS LEAVE WITH YOU. DAVID."

She found herself at the window again, the twins tight in her arms, tears raining down her face. Together they watched the darkening water, where sometimes English ships came in from the sea.

THE END

# CHAMPION SPARK PLUGS

firing at

the extreme pressures and temperatures encountered in our latest turbo-supercharged, high altitude aircraft engines have compiled an unequalled record for dependability. Champions are on active duty on every front.

In the piercing cold and rarefied atmosphere of the sub-stratosphere, where air supremacy is gained, spark plugs must provide their life-giving spark under most abnormal conditions. The same exhaustive research, specialized engineering and uncompromising manufacturing standards which have made Champion Spark Plugs the ultimate in dependability for every earth-bound engine are combined to give to our

air forces and those of our Allies spark plugs with the same characteristic dependability. Your spark plugs are of primary importance in getting the utmost in performance and economy from your car. Have them cleaned and checked regularly every 4,000 miles. When it is necessary to replace worn-out, inferior quality spark plugs which waste precious fuel, be sure to insist on Champions.

**TO SAVE GASOLINE—KEEP YOUR SPARK PLUGS CLEAN**

# Freedom of the Air

## *is the Beginning of all Freedoms*

★ It is now clear that Freedom of the Air is the crux of all we fight for.

Our enemies planned to dominate the whole world by dominating the air. They have taught us that control of the air in ruthless hands can mean enslavement of the peoples, lands, and seas beneath.

Now we see that Freedom of the Air is the beginning of all freedoms.

The air is the crucial battlefield because the air is the highway of the future, and because the airplane is destined to be the key vehicle of transportation. Our military planes, the fighters and bombers that America's gigantic aviation industry is putting into the air by the ten thousands, are the emergency weapons we have been forced to draw to clear the skyways for free men to fly.

The air is waiting for passengers and freight to move upstairs. It is waiting for men of good

will to come and go anywhere, anytime. It is waiting to bring the good things of the world to fireside and factory.

It is waiting to quicken the fellowship of free peoples. Along its broad highways course the hopes of democracy.

Here then is a high purpose that gives democracy meaning. Here is something bigger, more final, than our old earthborn belief in Freedom of the Seas. For we have found the controlling freedom, without which all others wither and die. America's very hope of existence as a good place to live depends on Freedom of the Air.

With such a destination no sacrifice can be too great, no effort too much. For such a cause no American will hold back his substance, his hands, or his will.

Freedom of the Air is greater than a doctrine. It is an aspiration worthy of the sons we send to battle, and of the love we send with them.

# CHINA FLIGHT

BY PEARL S. BUCK

ILLUSTRATED BY MARTHA SAWYERS

## Story Thus Far:

WHILE houseboating in China with his friends, the Hatfords—Arnold Hatford and wife, Leone—Lieutenant Daniel ("Dan") Hatford, of the U. S. Marines, hears about Pearl Harbor. Losing no time, he goes to Shanghai; his ship has sailed, and he is arrested.

With him, when he is interrogated, are two women: Jenny Barchet, an American newspaper correspondent; and a Mrs. Shipman, who runs a house for unfortunate girls: the "Gate of Mercy." Shigo Kuyoshi, a Japanese official, controls all three of the prisoners. He sends them to prison. He has the girl and Mrs. Shipman interned.

Wanting to see James again (she has fallen in love with him), Leone Hatford deserts her husband and goes to Shanghai and takes refuge in the home of her grandfather, old P'an Lao-yeh. While, Jenny realizes that Shigo is in love with her. He makes many advances; then, guessing that Jenny is in love with Dan James, he asks James to become his ricksha man!

A short time later, assisted by Shigo's chauffeur, a man named Ling, James gives his guards a slip and goes to the home of P'an Lao-yeh. Convinced that her girls are in peril (Shigo has abducted one of them), Mrs. Shipman closes her house and she, too, goes to the home of P'an's grandfather.

In an evil mood, one day, Shigo goes to Jenny's room (on the third floor of her hotel) and attempts to force her to accompany him to his home. But Jenny defies him; running to a window, she jumps out. The fall does not kill her; it renders her unconscious. And Shigo takes her to his establishment.

Learning of what has happened to Jenny, Ling goes to James. The American—alone and unarmed—can do nothing. But Mrs. Shipman tells her she can save the girl. Rushing to Shigo's home, she makes her way to Jenny's bedroom. Finding the girl still unconscious, she insists on staying with her, watching over her as a mother.

While the Japanese search for James, Leone Hatford, noted Chinese guerrilla leader—the "Silent Wolf"—enables him to make his escape from the city. The Silent Wolf does not accompany the American: in love with Leone, and hoping to see her, he remains at P'an Lao-yeh's. . . . Under Mrs. Shipman's watchful eye, Jenny regains consciousness. Whereupon, Mrs. Shipman and Ling, working together at night, carry Leone through a window to Shigo's wall-surrounded home. While they are climbing the wall, someone sees Mrs. Shipman. "They've got me!" she cries. "Run for it, Ling—save the girl!"

## VIII

LEONE looked down in the darkness and saw the dimly outlined faces of two guards. There was nothing for it, she thought. Better it was to save the girl and herself than for all of them to be lost. She dropped the strip of cloth he held and slipped lightly over the wall and picked him up and seizing Jenny under her arms, fled with her to the Chinese city.

"Mrs. Shipman," Jenny whispered. "Where is she?"

"Maskee," Ling said shortly. "She come over side. Too heavy."

"Oh, but is she safe alone?" Jenny asked.

"I can do—can do," he said. If he told the girl the truth now she would want to back. There was nothing to do but to go and save two lives out of three, at least.

IT WAS not quite two o'clock when Leone heard on her door the soft scratch of an old nurse's fingernails. She called "Come in, Foster Mother."

The old woman came in without lighting a lamp and feeling her way to the bed she had over and whispered:

"The foreign girl is here."

Leone sprang from her bed and buttoned a robe quickly about her.

"Draw the curtains and put on the light in this one room," she said, "and bring the girl here. Is Ling with her?"

"He is," the old woman replied.

"And the Old Foreign Mother?"

"No, only the girl," the old woman replied.

Mrs. Shipman was not there! Then where was she? How had Jenny escaped without her?

She waited anxiously until she heard the footsteps coming near her door. Then quickly she put aside the curtains and Ling came in still half carrying Jenny.

"Oh," Leone whispered, "quickly—put her down on my bed. She is fainting."

But Jenny shook her head. "No," she gasped. "I'm not—I won't—"

"Lie down," Leone said with soft authority. "Do not speak. Ling will tell me everything." She turned to the old woman, who stood wringing her hands. "Foster Mother, bring some hot food for her, something easily eaten, soup and a little hot soft rice."

The old woman nodded and went away.

"Now," Leone said to Ling, "tell me first, where is the Foreign Mother?"

Ling had been thinking what to say about this Old Foreign Mother. Well he knew that by now she was already in the hands of the guards, and he knew that if he told Leone so and especially if the American should hear it, such were their natures that they would immediately wish to return to rescue the old white woman. Yet of what use would that be? It would only mean that all would be caught in the trap of the enemy, and doubtless all killed or at most put in the vile prison they kept for those who tried to escape. So he had already made up his mind what story he would tell and now he told it, and thanked heaven that the American girl understood no Chinese.

"The Old Foreign Mother fell and hurt

her ankle as she came over the wall," he said glibly. "You know how much she weighs. Well, when she rose, I saw she could not walk, and rather than lose all our lives, I told her to escape by the back gate to the house of a friend of mine, and the old cook helped her. By now they have her in the fuel house hidden behind the straw where I told her to hide, and there she will be safe for a while, and I told them you would reward them well."

"I will, indeed," Leone said gladly, "and tomorrow I will go and see her myself."

"They will not thank you for that, lady," Ling said hastily. "It will be better if no stranger goes to see them. No, let her rest there and after a day or two when the first noise of the escape is blown away, I will go and bring her here myself secretly and so will all be saved."

"But you," Leone said, "you cannot go back to that enemy house."

"No, I will never go back there," Ling said. "I am escaped also, and they will soon guess it is I who helped in the escape. I will go outside the city and fight beside the guerrillas from now on."

Then he told Leone of how they had escaped, always staying by his lie that the Old Foreign Mother was safe, too, and so there remained at this moment only the question of what to do with Jenny. They both looked at her now and she lay there awake but so pale that her whiteness frightened them.

"Certainly we cannot let her go on tonight," Leone said.

"No," Ling agreed. "Besides, there is the matter of how she is to go. We cannot proceed with her as she is, past the guards at the barricade. She must be disguised, and yet what shall we do to her eyes? There is no stain we can put into them, is there? The hair and skin can be dyed. Can she pretend to blindness?"

"Let us not decide it now," Leone said. "I will keep her here in my room and say nothing until tomorrow. If we can get her

Leone looked at this girl whom she would like to have been. What man could help loving her, she thought

away without telling my grandfather, it will be so much simple good. Now you must go and rest in the rooms where the cook sleeps and tomorrow we will plan."

She pulled out a table drawer as she spoke and took out some silver, and Ling started back as though he were affronted and she pressed it on him, but still he would not take it. Then she said, "At least take it because it may be you will have to spend some money on the Old Foreign Mother before she is safe. There will be someone to be bribed and you ought to have your pockets full." Only then would he take it for the sake of his lie, and he went away.

Then the two were left alone together.

LEONE went over to the bed and sat down and she looked at this girl whom she would like to have been, and the more she looked the more sad and gentle her own heart grew. But of course a man would love this girl, she thought. What man could help loving this beautiful creature? Her soft, fair hair lay on the pillow and her eyes, very brave and blue, looked up.

"How can I thank you?" Jenny whispered.

"You need not thank me," Leone said. "What I do is for someone else—someone who loves you very much."

Over the transparent white of Jenny's skin there came a faint rose. "Is he here?" she whispered.

"No," Leone said gently, "but you will see him soon."

She rose, then, unable to bear more, and pretended to smooth the quilts, and at this moment the old woman came in with the food, and she tasted it to make sure of the

(Continued on page 81)

## Those Beautiful Beginnings

Continued from page 12

their natural response to anyone who was young and pretty and eternally gay. . . .

Julie was on the phone, and Martha lingered in the dining room, listening to the only available end of the conversation. This she did, it would seem, simply to torment herself.

Across Julie's face was flickering an amazement that gave way to delight.

"Garth!" she cried. "Well, am I surprised, for heaven's sake!"

Garth. Martha set her lips in a firm line. Garth was the one before the last. A nice boy—an ensign in the Navy. He was in town, Martha gathered, on shore leave, and he wanted to see Julie very much. Julie, in the meantime, was thinking on her feet.

"Naturally I want to see you! Why, you know I do! But let me dope it out a second. Well, how about lunch? Before I go to the canteen? That would be simply *too* wonderful, Garth!"

Julie put the phone back in its cradle and at once it started to ring again. This time it was Bob.

"Oh, my!" cried Julie. "I'd love to, Bob—you know I'd love to! But, I already have a lunch date. . . . Well, it's with kind of a nice old lady. . . . I know, but she's an old friend of the family and I couldn't very well tell her. . . . Oh, yes, of course I will, Bob! . . . Yes, Bob, darling . . . right after lunch—at the canteen!"

She put down the phone.

"Well!" said Martha.

"Martha! What else could I say?"

"I don't know. But did you have to say Garth was a nice old lady? Did you have to be so *fancy* about it?"

JULIE lifted wondering eyes. "But don't you realize how Bob would hate it, Martha, if he knew I was having lunch with a Navy man?"

"That's the point!" Martha snapped. "You shouldn't be having lunch with him!"

Julie was shocked. "And let him go overseas without seeing me? Let him think I wasn't even a *friend*?" She looked at her sister in deepening perplexity. "Listen! What did you do before you finally decided to marry George? Didn't things ever get kind of a little involved?"

Martha forgot that George had never had any very serious competition. "Of course they didn't!" she said. "But I was a girl who knew my own mind. And now there's just one thing I want to tell you," she went on, even more forcibly. "Sooner or later they're going to find you out—all these poor young men you've befuddled and befuddled. And they're going to leave you high and dry, Julie. You just mark my words!"

But Julie had never been able to mark Martha's words. There were too many of them. Then, too, Martha had always felt it was more important to be truthful than it was to be kind. A sound enough philosophy, but a bit too arid for Julie. She herself had never been able to bear the idea of making people unhappy.

"And particularly when they're in the service," she observed, aloud. "Why, it would practically be sabotage!"

But Martha had failed to follow this trend of thought. She was stalking out to the kitchen, virtue bristling from her very shoulder blades.

Julie soon shook off any slight uneasiness this conversation may have caused her. When the time came to meet Garth, her conscience was as clear as a child's.

And Garth was charming. There was no doubt about it. He was big and blond and sunburned, and he had his own slow and easy way of doing things. Seeing him again was like hearing an old song she had

once known and loved. Her eyes were misty.

"Oh, Garth! Life's sad, I think—life's awfully sad!"

He lifted one eyebrow. "I hope you haven't been doing any thinking, Julie. It would ruin you."

She shook her head. "Now that was the trouble," she told him. "You never took me seriously enough."

"Hey! Sure I did! Still do!" He put his hand over hers. "Haven't you managed to make up your mind, puddin'-face? About you and me? The preacher and the rice and the orange blossoms? You ready for 'em, Julie?"

Julie drew a long breath. Here, as she knew very well, was the time to tell him about Bob, and she meant to do that. She meant, moreover, to be wonderfully gentle and tactful and kind. And no doubt she would have been all those things if Bob hadn't chosen that moment to come barg-

The cheerful smile on Julie's face was getting a bit stiff and anxious. It might have been better, though, if she had continued to turn this smile, carefully, from one to the other. It might have been better if her eye hadn't happened to fall, just then, on a boy called Clem Loomis.

Clem was in the Army. He was a sandy-haired young man with a very earnest expression and he hailed from some little town in Arkansas. That was all Julie knew about him and she hadn't actually been interested in knowing anything more. But at the moment, this previous indifference seemed something to turn to good account. Now she had a way of showing Bob that it was her nature to be friendly to all the world. It wasn't just Garth she was singling out. He'd be able to see that. At the same time, it would be a discreet way of letting Garth know that her interest in him meant no more than her interest in a casual acquaintance like Clem. It would be,

She found it advisable, though, to leave the canteen as soon as she could. She murmured some little excuse about a errand for her sister and tripped out of place without an escort. Safe at home she thought, she could deal with Bob Garth in turn. It would be so much simpler over the telephone.

But the sight of Martha's troubled face put these tactical little problems out of mind.

"It's just been a perfectly fiendish trick," Martha said. "Junior's been having tantrums—and the laundry's lost three of George's best shirts—and now they've got Gladys as the last and final straw. I suppose it's anything serious," she said on, a shade defiantly, "but I've put her to bed and called a doctor. I thought I'd be on the safe side."

Julie was all sympathy at once. "I'm sure you were absolutely right," she declared. "Now you just go and take care of Martha. I'll get the dinner."

Martha was in one of her comical moods, but she could make no real objection to this. Julie—and this always applied to everybody—was a truly wonderful cook. What she could do with a steak and a few potatoes and onions was something to put George Prentiss into a good humor for a whole evening. And later on, he was as much—which was not too tactful a thing to do in front of Martha, a practical person in her kitchen, and economical—never really inspired.

She looked with a dubious eye on the pudding Julie had made. Then, even more dubiously, she tasted it. "You've put too much vanilla," she said.

George immediately rushed to an impassioned defense of the pudding, but he did not linger in the dining room to hear it. The doorbell had rung—and he was already on her way to the door.

THE caller was Clem Loomis and he was naively confident of his welcome. "I thought it would be all right," he said, "for me to drop around."

Julie had forgotten his existence. She had to pull herself together hurriedly. "Why, of course!" she cried. "How wonderful!"

But she was relieved when George came in to take over the burden of entertainment. She had to decide what to do about Clem. She was just feeling her way to some discreet little mention of other engagement when George, who had taken a fancy to the boy, dragged him to the kitchen. They would mix a cocktail of drinks, he said. Julie glanced up at the telephone. Bob, she thought, was not going to like this.

But Bob didn't bother about the phone. The doorbell rang again—and this time it was Bob in person, with Garth standing beside him.

"Well, for goodness' sake!" said Bob with a feeble little smile. "It never rains but it rains!"

They didn't think this was any funny. They came into the room gracefully like a committee. They began to speak without further ado, about the business hand.

"Julie," Bob said, "we want a secretary!"

Julie glanced uncertainly toward the dining-room door. Martha, she knew, would be somewhere around that door listening in to all this.

"Of course," Bob added, "if you're interested—"

"We'll go away!" said Garth.

Now they were so friendly they could both get into the same sentence. They looked at them in growing alarm.

"Of course I'm interested. Only,"

"I want a volunteer for a dangerous assignment. The colonel's looking for a secretary"

JEFFERSON MACHAMER

ing over to their table, looking as if he were in a tank.

He acknowledged, stiffly, his introduction to Garth. Then he turned back to Julie. "Funny thing! I had an idea you were having lunch with an old lady. A nice old lady tottering around on a cane. Now where'd I get a cockeyed idea like that?"

Julie looked at him reproachfully. There was no need, she thought, to be sarcastic. "That poor old lady's got a headache," she explained. "A perfectly splitting headache."

"I'll bet she has!" said Bob.

Julie gave him a placating smile. "Now, Bob," she said, "Garth just happens to be an old friend of mine too—and I think it's wonderful you could meet each other. And isn't it quite a coincidence—our all getting together like this?"

Neither of the young men, it was plain, found it an altogether delightful coincidence. They addressed each other with a guarded courtesy. Neither of them would yield one romantic inch to the other one. Both of them accompanied Julie out of the restaurant and across the street to the canteen.

In the canteen, the situation became even more difficult for Julie. When she glanced in Garth's direction, the line of Bob's jaw would harden to an alarming degree. But when she turned back to Bob, Garth would sink into gloom like a fog.

Julie thought, the smooth way of handling the matter. It would be precisely what a woman of the world would do.

She turned, with this reflection, from both her old love and her new. She leaned forward, with an air of breathless eagerness, to hear what Clem had to say for himself.

"Out my way," he was telling her heavily, "it's very hot. I mean in the summer it's hot."

Julie managed to look remarkably wistful over this. "I'd simply love to go to the Middle West," she said. "It must be fascinating. All those prairies!"

"Well," he admitted, "it does kind of get you." Then he looked at her with compassion. "You mean you've never been out of New York?"

"Oh, yes!" Julie said. "Once to Cape Cod. And several times to Florida."

CLEM dismissed Cape Cod and Florida with a tolerant wave of his hand. He went on talking about Arkansas. In the meantime, Julie observed out of the corner of her eye that Bob and Garth were no longer glowering at each other from opposite sides of the room. They were over by the soft-drink stand, dishing away like old pals. Julie beamed. She saw herself suddenly as a gracious influence in the lives of men. It just went to show, she thought, what a little feminine subtlety could do to a situation.

**T**OUGH as nails. Fast as lightning. Dependable as the fighting men who man them—Willys-built Jeeps are sparking the attack of American and Allied fighting forces in every thundering theatre of war.

added, "I hate people being so mysterious!"

"Julie," Garth said, "you're the mysterious one."

"No," Bob said patiently. "It's simple. He thinks you're *his* girl. You've got to tell him he's wrong."

"Well—" said Julie.

"Look!" Garth said. "Bob thinks he belongs in this picture because last night he had a date with you. But he's not a guy who'd be jumping to conclusions. Why would you let him get away with an idea like that, Julie?"

There was one of those hearty masculine bonds between them. It irritated Julie very much. She looked coldly from one to the other.

"I didn't think you'd talk about me," she told them. "I didn't think it was considered the gentlemanly thing to do."

"We didn't talk about you," said Garth.

"We've got to know where we stand," said Bob.

"Sure!" Garth agreed. "That's reasonable!"

BUT it wasn't, Julie thought, in the least reasonable. She looked at Bob moodily. It was natural enough for him to be jealous; it was to be expected. But it was not natural for him to be on terms of great amity with the person of whom he was supposed to be jealous. It did not indicate the blind and frenzied ardor to which she was accustomed.

Looking at Bob, she saw him stepping back into the past—with Garth waiting for him there. Before her very eyes, he was fading into yesterday—like an old snapshot, like a half-remembered song. Just for a second, she felt a little pang.

Then her thoughts veered to Clem Loomis, still rattling bottles around in the kitchen. Well! She and Clem could just have a nice quiet evening at home. They could listen to the radio with Martha and George.

"It's a good thing," she announced, with dignity, "that we found out in time about the terrible mistake we were making."

"Wait a minute," Bob said. "Who was the mistake? Him? Or me?"

Julie sighed. "Well," she said, "I guess you both were—weren't you?"

Their lives weren't ruined, but their pride was rolled flat. They almost seemed to have, by this time, a common pride. Together, in a very indignant fashion, they marched out of the house, and Julie looked after them a bit wistfully.

It was not often, after all, that two exceedingly attractive men went out of a

person's life in a single instant. But she summoned a brave little smile for Clem—as George brought him back to the living room. Clem wasn't really such an awful-looking boy. It might be better, anyhow, to have someone around who wasn't too devastating at first sight. A person like Clem, Julie thought, could grow on you.

The first thing to do was to discover the tastes they might have in common. She had just opened her mouth to ask him how he felt about the movies, when he

put down his drink, shot his wrist out of his cuff and stared at his watch.

"Well!" he said. "For Pete's sake! I've got to be going!"

"Going?" echoed Julie incredulously.

He nodded. "Got to get down to Penn Station," he said. "My girl's getting in on the nine-fifty-five."

Julie was stricken dumb—but fortunately he didn't notice that. He had been fishing in his wallet for a snapshot of his girl and now he was handing it over

proudly. The girl was a rabbit-faced person looking self-conscious in a haystack. Julie achieved a smile.

"Why, Clem!" she cried. "She's darling! She's simply too darling words!"

MARTHA was ready, the instant the door was closed, to say what she had in her mind to say. She was prompt in a virtuous and honest wrath. She was quite beside herself.

"I knew it!" she said. "I knew it!"

Julie looked at her uneasily. "What, Martha?"

"Why," cried Martha, "I knew it happen sooner or later. Playing fast and loose the way you have, Julie, I just you'd be left high and dry like the told you often enough. I've told you told you."

"Now listen," George said. "You maybe a little overwrought, my dear."

Martha swept him aside. "And you won't see Bob Waldron again," she told Julie; "and you certainly won't see Garth Randall. And you can't fall in love on this new boy the way you thought you could. And all because you wouldn't take a word of advice from me or anybody else. So what are you going to do? You have a friend left in the world. And I hope you're satisfied!"

Julie's eyes filled with tears. She saw herself as Martha saw her. She saw, stretching ahead of her, a whole time of dreary days and lonely nights, saw herself fading into spinsterhood.

The doorbell rang; she answered because she thought it meant anyone was coming to see her, but because it was her nature to respond, on the instant, to the ringing of a bell . . . any bell.

So it came about that she opened the door—and lifted startled eyes to a stranger who stood on the threshold.

"My name's Cairnes," he explained. "Doctor Homer Cairnes. I believe I'm supposed to see a little girl with a cold."

He was young and—although a little older—he was attractive. He was amazingly attractive. And Julie knew from the moment—as she was to tell Martha the next morning—that he was the one. He was really the one. A sort of para-normal warmth was stealing over her. She felt little dazed and breathless.

"I'm sorry," she said. "I didn't mean to be staring. But—haven't I met you somewhere before?"

THE END

"Mr. Barker says you may all go for a bite of lunch now"

Italians receive special shipments of food from Yugoslavia and Bulgaria.

One night I was caught away from home at midnight, Greece's hour of curfew, and forced to go to a hotel for the night. While I waited my turn to register, a German officer slammed his fist down on the hotel counter. His cheeks emptied and filled like a bellows, fanning his anger.

"This has got to stop!" he shouted.

The hotelkeeper blinked in amazement. "Yes, Herr Captain, I agree," said the Greek, trying to accustom himself to the novelty of a humane German. At the same time, he wondered how Herr Captain proposed to remedy the situation.

Later, I learned about the outrages that were disturbing Herr Captain. This night and every night, it seemed, Italian soldiers had been bringing young Greek girls to the hotels of Athens—sometimes girls hardly in their teens. Herr Captain, it appeared, had young daughters of his own, and his concern was personal rather than official.

To the Italians, their right to the girls was indisputable; they had bought them, part and parcel, from their parents, and paid for them with that most precious of commodities—bread. The price would frequently range as high as a full loaf, although in cases of extreme starvation, the family might settle for some fraction of a loaf. Starvation not only consumes the body, but enfeebles the mind and destroys the spirit.

### Enforced Starvation

These starvation conditions did not just happen. The Germans knew only too well what they were doing. For one thing, they hoped that if life in Greece were made unbearable, the Greeks would consent to go to Germany as workers.

But the Germans had still another reason to encourage starvation: the black market. The black markets are run by the occupation troops with food taken from country villages. The confiscation is car-

ried out with typical German thoroughness. A strong force of soldiers driving trucks, cars and motorcycles, surround a village. All the inhabitants are herded into the central square and ordered to turn over whatever stores of food are available. Those who refuse are shot at once or removed to concentration camps.

The Germans then establish the black-market prices to suit their fancy. Only the very well-to-do can afford to buy. I left the house some mornings with 10,000 drachma (about \$100) in my pocket. With this sum, I was able to buy about one pound of whatever kind of meat was available, assuming that any was available. With a ration card, one can buy three ounces of bread for 50 cents three days of the week, and five ounces for 50 cents on the other four days. Those are the official prices. At black-market prices, one ocre of bread (a little more than two pounds) costs nearly \$30. Soap, when you can get it, costs about \$70 an ocre.

But the black markets feed only a few,

and only sporadically. In the twin cities of Athens and Peiraeus, the normal rate used to be 40 persons a day. During the two winters since the occupation has seldom fallen below 500 a day. When Allied food shipments were delayed, it rose to 1,700 and stayed at that level for three days.

What about births, the positive side of the picture? There are no longer many births in Greece, or at least so few that they are entirely negligible. Furthermore, a large number of Greek women are no longer even capable of child-bearing. Acute undernourishment enfeebles vital organs and frequently results in premature menopause. Not that any Greek woman desires motherhood today. It is a struggle enough to keep alive herself, whatever children she may have alive.

Greeks are not allowed to enter an American restaurant that has been appropriated by Germans or Italians. Neither are they permitted to sing in Greek or show the Greek flag or listen to the radio. The movie

still open, although the only films shown are German, French and Italian. Greeks who have not enough money for food can still afford movies, which are cheap. There they go in large numbers and try to get their minds off their hunger. I was watching a German-made film one day when a table laden with food was shown on the screen. The audience, almost to a man, rushed from their seats and ran up to the screen with hands reaching out greedily. Reason is no match for hunger.

After all the Greeks have been through and are going through, it is astonishing that there should still be resistance. I would not even attempt to explain how that is possible. As a doctor, I know far better the reasons why it should not be possible. The resistance being made by these hungry, enfeebled people makes me very proud to be a Greek.

### Their Resistance Unbroken

No chance is overlooked to show their contempt for the enemy, to sabotage his war effort. Greek nurses have refused to attend German soldiers. As a penalty, they were no longer allowed to be nurses. The German and Italian officers' club in Athens has been destroyed. Seven Greeks suspected of being in on the bombing raid paid with their lives. When twenty English soldiers were led to prison recently through the streets of Athens, the citizens greeted them with cheers.

From the mountains of Epirus, Macedonia, Peloponnesos and Crete, guerrillas descend periodically to disrupt vital enemy communications and supplies. To put a stop to the cutting down of telephone wires in Athens itself, the Italians devised what they considered a neat system: The residents of each neighborhood were made responsible for the telephone wires in their section. Greeks were assigned to various shifts during the day and night and whoever was on "duty" when the wires were cut was executed.

The wires went on being cut just the same. While they were down, the train leaving Athens for Salonika would mysteriously never reach its destination. That

supply line has now been permanently destroyed by the blowing up of the mountain bridge in Papadia. For this act of sabotage, 300 Greeks were shot and about a third of the city of Lamia was burned.

Greeks still continue to escape in droves from the islands of the Aegean. They flee in small boats to Turkey and from there make their way down to Africa, where they join the British army or navy. Some friends of mine were not so fortunate.

A brother and sister tried to escape with party of forty, but their boat developed motor trouble and had to put into port Kythnos. There they were captured. With them were three British soldiers—who made things look even worse for them.

The brother was locked up with the others in an underground cell about twelve feet square, while his sister was shut in the water closet next door. They had no blankets whatever and were given water only once every three days. During the bitter winter the prisoners were filthy with lice and had to huddle against one another to keep warm. The sister developed pneumonia and pleurisy, but miraculously recovered. Both brother and sister are still in prison.

The mother of these two is a widow. Her husband died horribly of tuberculosis after his health had been broken by lack of food. The mother's one consolation is the belief that her other son, a flier, is fighting with the Greeks in Africa. What she does not know is that he was killed in a plane crash the day before he was to start active operations.

### The One Bright Spot

For those who remain behind, the one bright spot on the horizon was the beginning of food shipments from the Allies. Today, eight Swedish ships, chartered by the Greek War Relief Association, carry 18,000 tons of foodstuffs to Greece monthly—a magnificent contribution; before the war, Greece imported 100,000 tons of foodstuffs monthly. The 18,000 tons provide meager subsistence ration for 3,000,000 Greeks. The remainder of Greece's 7,000,000 population starve, or go hungry.

The Nazis tried to establish a National Socialist club for Greeks. In other words, a club for Quislings. A night was set for the first meeting, but before the meeting ever convened, a bomb was set off and the clubhouse was blown to smithereens. A second attempt to organize such a club has been made by the Nazis.

While there is a breath of life in the tired, sick bodies, the Greeks won't give up.

THE END

way. The road was strite for them as knew it, he said. He sat up with the driver who stopped cursing but seemed a bit suspicious. Didn't like the pipes, he didn't. Ned Pan said little, tootling away and speaking to us only when the driver elbowed him gingerly and bade him answer the gentlemen's question.

When we got to the entrance of the camp and had shown the guard our passes, we looked around for Ned. But Ned was gone, seeped back into the night and the fog just as he had emerged from it. A little way off we heard his pipes. You could almost see him smiling as he blew—a smile of elfin disdain for Americans who were lost in the night, who were bewildered, who had given him half a crown in their childlike delight to have found someone who knew the way.

We were all for chasing back, for taking Ned Pan in with us. But the sentry said that we had better play our luck and stay put. And that was the last we saw of Ned Pan, although the American Red Cross told us later that he, too, was now an American Army nephew, pipes and all.

This nephew-and-niece business started last Christmas. It is known as "The Stars and Stripes War Orphan Fund." Just whose idea it was is of no consequence now. It is something of a hang-over from the first World War when the American doughboy in France became the rich godfather of many French kids whom war had orphaned.

Last December, the American Army newspaper, The Stars and Stripes, began to publish stories of how the homesick American soldiers in the British Isles were preparing to play Santa Claus to blitzed British kids in their camp areas. The idea swept the American troops. There was neither plan nor form to it, and presently it threatened to get out of hand.

A soldier would hear from home—from his children, from his kid brothers and sisters. There was no chance, of course, to send them presents. Therefore, he would do it by proxy. The individual soldier could make or buy such toys as there were and give them and money, and issue candy and cakes to any kid he happened to know.

After all, he didn't care who the kid was. It was the Christmas season, and nine tenths of his heart was three thousand miles away west. The lucky British kid, his arms and stomach stuffed to capacity and more, was only a symbol. Or if an outfit from squad to squadron went to it as a body, they decided after much argument what the child should be—sex, age, and so forth—and put it up to the local people to produce. And that was where eventually the American Red Cross came in.

## Made-to-Order Relatives

Thus far, the American soldier afoot, on wheels or awing has posted about fifty thousand dollars with the American Red Cross. He is doing it by personal contributions on payday, by shows, dances and various kinds of parties. He or his outfit merely specifies what sort of a kid they want to make life easier for. The Red Cross, drawing upon the lists of the British social agencies, finds a fatherless, motherless, or wholly orphaned young one, almost invariably picked out of the slums like Ned Pan, who meets or closely approximates the dream kid specified.

The lads are then notified that they are sponsors of 'Alf, 'Erbert, 'Ennery, Margaret, Jane, Gwen, Vi or Phyllis (last name never given), and a whole crop of new uncles has been created.

Each soldier gets a photograph of the blitz kid he is helping to uncle, and when-

ever it is possible, the child is taken to see his uncles, who give him or her, among other things, the keys to the cities of New York, Chicago, San Francisco, Boston and Atlanta. Quite often the youngster goes home with a massive stomach-ache and a lasting conviction that all Americans are millionaires, wildly generous, affectionate—and slightly screwy.

To be eligible for such sponsoring, it is necessary only that the blitz kid be the child of poverty, that the parent or parents he has lost be the victim of Hitler's bombs or bullets, blitzed at home or slain in battle. For a little more than eighty dollars, a blitz kid can be clothed and saved from malnutrition for five years.

The fund grows daily. So does avuncular rivalry. Having seen the sponsored child, or even a photograph, individual uncles or uncle groups are quite likely to declare that this child is indeed the most beautiful, most intelligent, best behaved, most deserving and altogether the most lovable brat in all Britain and they act financially accordingly. Thus, after having subscribed the money necessary to become a child's uncle, they proceed either to become the uncles of more kids or donate additional funds to the welfare of their selected pride and joy.

## Birth of an Uncle

Ned Pan delivered us that night in time to hear a large uniformed citizen of Texas—Sergeant Morton Popeye Billtong—announce to a mess hall full of American soldiers that on such and such a night, no member of that outfit was expected to drink more than four beers. Moreover, no man was expected to be out of bed later than midnight, leave or no leave. In the morning, shaving should be extra clean, shoes overbright, uniforms fit for inspection by the commander in chief himself.

Sweet Pea, seven years old (the daughter of a guy who died at Dunkirk, whose mother was killed by a taxi in the black London night on her way home in cruel exhaustion from her charring job) was coming on the morrow to visit her uncles. Furthermore, Sweet Pea was fetching her uncles a present, a trifle she had bought with half the money the lads had sent her to go shopping with—an American flag. They knew that she was bringing the flag because she had written to Sergeant Popeye:

"I am telling you what the present is so that you can let me know whether you would rather that I should change it for something you would like."

We couldn't get to sleep for a long time that night. The radio had told us good news and bad. The Japs were taking a lacing off the shores of New Guinea. The Allies were not faring so well in Africa. Russia was crushing forward to Rostov. Politicians in America and England were viewing one another with alarm. Two soldiers were sentenced to be hanged for murder.

Not that the lads in the camp Ned Pan had guided us to seemed to care. For a long while after Sergeant Popeye announced that Sweet Pea was coming, they talked about her.

Nevertheless, we lay awake a long time down there in the West Country. All night it seemed, planes roared over our heads. All night, soldiers trudged past our barracks, their boots squishing in the soft black mud. And yet, somehow, we seemed to hear, over and over, the eerie, small refrain blown on shepherd pipes by a wizened kid from Mile End—a kid who was an old man. And we could see the pinched small smile on his face when between tootles he told us: "Since 'Itler came over I ain't afraid o' nothin', sir."

## China Flight

Continued from page 73

eat and salt, and then took it to Jenny and held the bowl while Jenny lapped from it. She watched the girl eat, her face tender as though she looked at a child, and when Jenny had eaten she herself took a soft cloth dipped in hot water and wiped the girl's face and hands to refresh her. Then she said to the old woman: "Go you go outside my door and stretch yourself on a quilt there, and I will lie at the foot of this bed, and so we will all rest here or two until morning tells us what we must do."

The old woman went away and Leone lit the lamp and she said to Jenny, "Do you mind me if I lay myself at the foot of the bed?"

"I would like to have you here at my side," Jenny said. "It makes me feel more comfortable here—the bed is so wide, and we are not very big, we two."

Leone shrank from this intimacy. "I would rather lie at the foot," she said in a soft little voice. So she stretched herself under a corner of the silk quilt at the foot of the bed and lay so still that soon she heard Jenny's breathing in quiet sleep. "I shall never sleep again, I think," Leone told herself, and within her bosom her heart retreated into its loneliness. She had sent Jenny on her way, and the two of them were gone away together, what reason had she then to live?

MRS. SHIPMAN clung for one long moment to the top of the wall. Then her legs were jerked and she fell heavily.

Two little Japanese soldiers went under her and she was not hurt. She stumbled to her feet and other soldiers seized her arms and collar.

"You needn't grab me," she remarked calmly. "I know what's happened."

A tackle of furious talk burst from them but she ignored it. "Even if I could understand, I wouldn't," she said. Her old head fallen off and her white hair straggled about her face. She seemed to see no one and she talked aloud steadily to herself after the habit of these days.

"Now what'll I do? It doesn't matter for me, but I've got to give that poor child some time. If I can keep 'em busy a little, that's the best I can do."

She tramped solidly along between the soldiers, her big plain face solemn and her eyes bleak. The house was full of noise from top to bottom, and she heard Shigo shouting.

"He doesn't sound good," she said. "Well, I'm afraid of him."

They were hustling her up the steps now suddenly she heard the sound of something being beaten. That is, she heard the sound of rattan or leather through the air. She heard the cutting thin sound of a blow, and the hiss of indrawn breath. There was no outcry. They hustled her into the hall and into Shigo's office. She knew that he was beating the old Japanese woman with a rattan cane, and the sound of his own breath was his own, hissing through his clenched teeth as he beat the old woman. She stood clinging to a chair to keep from falling. Blood streamed down her right cheek and her face was olive-green. She was silent—she did not look up when Mrs. Shipman came in and the frozen soldiers with her. But Shigo's head fell under Mrs. Shipman's furious

"You—you brute of a man!" Mrs. Shipman gasped. "You—you—you Satan—" Shigo threw down the cane and spat a word to the old Japanese woman, forcing herself to move she crept away. Then he turned upon Mrs. Shipman. His face was crimson as though he had been drinking and his eyes were glittering. He stared at her for a second and

then burst into shrieking laughter. "You were going to escape!" he screamed. "You didn't escape!"

"Don't holler at me," Mrs. Shipman said in her loud, flat voice. "I'm not deaf, young man."

There was actually froth of saliva at the corners of his mouth, she observed, like a mad dog.

"Wipe the spittle off your face and stop acting like a crazy fool," she said imperiously. "It makes you look silly."

For one moment Shigo was struck to his heart. Did he look silly? Before his soldiers? They did not understand this woman, but anyone could see that she was not afraid of him. Wavering between her scorn and his pride he suddenly lost himself. He would make her afraid! He felt his brain whirl inside his skull and his heart suffocated him. He clawed the air with his hands and in a tornado of rage he leaped upon Mrs. Shipman and bore her down to the floor. She felt his nails in the flesh of her face and she struggled against him.

"You—you wildcat!" she shouted. Then she felt his doubled fists pounding—pounding—pounding in her lips and mouth and eyes. She heard him shout a command to the soldiers and she felt upon her old body the heavy blows of the butt ends of their guns.

"Paul!" she gasped. "Oh, Paul!"

Shigo leaped to his feet and shouted a command. A soldier whipped a gun to his shoulder and fired into Mrs. Shipman's heart.

LEONE rose before dawn and crept about the room quietly. She changed her outer coat and washed her face and hands and combed her long hair and coiled it freshly. Then she went over to where Jenny still slept. Her breath came long and evenly. This was good sleep, Leone said to herself, healthful sleep. Every hour of it would strengthen the girl and make her ready for the next hardship—whatever it was! For who knew what lay ahead of this lovely foreign creature? Her fair hair was tumbled about her sleeping face, and how could all this foreignness be hid?

Leone sighed and shivered. Somehow she must think of the way to hide it. She must somehow bring these two together again, Daniel and Jenny. In the denial of her own love it seemed to her that if she could see the two together and know that somehow love could be fulfilled, though not for her, it would bring her peace.

Yet how could she do this alone? Who could help her? Her grandfather would only be more terrified if he knew that Jenny was here in his house. Then she thought of the Silent Wolf! He was still here. She had only yesterday been uncomfortable because he did not go away. The days had passed and he made no sign of going away. Why did he not go, she had asked herself, who was so clever at disguise? She had seen him twice talking to her grandfather and once she had been called to eat with them both, but she had not spoken to the Silent Wolf alone and indeed she had kept away from where he was. Now she was glad he had not gone.

She hastened softly across the room on her satin-slipped feet and opened the door and there outside it upon a mat her old nurse was curled and still asleep. She bent over her and whispered. "Wake, Foster Mother!"

But the old woman slept soundly, and Leone did not hurry her for she well knew that the soul must not be rudely pulled back from sleep, lest it injure the body by its too swift return.

"Foster Mother!" she whispered again. This time the old woman moved and

market -*

opened her eyes. "Go to the other guest and see if he is awake," Leone commanded, "and ask if he will speak with me in the big room. Tell him it is urgent and ask his pardon for calling him early." The old woman struggled to her feet and rubbed her eyes and trotted away on her hands and knees, and Leone waited where she was, leaning back and call and there be none to hear her. In a very few minutes the old woman came back and she said:

"He says he will be there as soon as he has rinsed his mouth and put on his garments, and I sent hot water in for him to wash his face."

"Good," Leone said, "and now you are to stay here lest she wake."

The old woman nodded, and Leone went her way in the main room and sat down. Soon she heard the footsteps of the Silent Wolf coming heartily across the stairs and in another moment he was seated at the open door, and all the light of the morning shone down upon him. At that moment she saw most unwillingly that there was a very handsome man, young and strong and his flesh so firm that the early morning became him like a garment of shining silk.

"You sent for me," he said simply, and she marvelled again that this man who could stammer so much sometimes when he spoke with her was able to speak clearly without defect.

"I am in trouble," she said, and with a movement of her hand to invite him to sit down, she went on: "Last night the American girl was brought here."

His brown face broke into the gayest smile at this news. Now the truth was that the Silent Wolf could hardly have had news that pleased him better than that for he was anxious enough that the foreign girl be found and restored to the foreign man and so divide Leone very early indeed from that one. He cried out before: "How was I not called?"

"I did not want anyone called," Leone said, "lest my grandfather be waked. He does not love such disturbance and at his age he ought to be spared. But here is my trouble: Doubtless the whole city will be searched today and for many days and what if they come to this house? Here we enter you and this girl, and how can we protect you if you are found here and she is?"

Now the Silent Wolf saw that it was a very dangerous thing indeed and he thought first of Leone. If it were known that she sheltered a fugitive, she could not live with her life. He looked exceedingly grave and pulled his lip and frowned.

"Is she able to walk?" he inquired. Leone shook her head. "She cannot walk far, be sure," she replied. "She is lying now and will eat when she wakes, but how is that enough to give her strength all she has suffered?"

"It is not enough," he agreed, and he rested restlessly and began to walk about the room so that the blood could flow more freely to his brain and stir his thoughts up. "She must be carried," he mused. "But how? If we put her behind the curtains in a bride's chair, the guards, being rude men, will lift those curtains to see if she is beautiful or not."

"A bride's chair will not do," Leone said quickly, "for she is very fair and her hair is yellow and her eyes blue."

"So she must be buried, somehow," the Silent Wolf mused. Now as he said these words, he suddenly thought of a plan and turned impetuously at the end of the room and cried:

"Your grandfather—he is so old a man he has a coffin, doubtless, ready for himself?"

"It has been ready since my grandfather died," Leone said wonderingly.

"Where is it?" the Silent Wolf demanded.

"It is in a small room near his study," she replied.

"Let us go to see it," he said and so she rose at once and led him to that room and there the great coffin was, of black wood, double thick, and covered with dust in its waiting. He heaved at the heavy lid and put it to one side and peered down into it.

"Yes, it will do," he said. "It is so deep that she can lie at the bottom, and we can put a false bottom over her. That we will cover thick with lime, as is done over the dead."

"**W**HY should we not simply seal it?" she asked.

He shook his head. "You do not know those enemy guards," he said. "They have been many times deceived and they thrust their bayonets through bundles of straw and packages of all sorts and perhaps they will demand that the coffin be opened, and we must be prepared for it." He frowned and thought a while. Then he went on: "We will send one to find some offal at a

"How many cursed foreigners are in this cursed city?" the Silent Wolf asked, but with good will too.

"She is old and wrinkled," Leone said, "and she has lived here so long she looks like one of us. Ling will manage it."

"Send him in to me with my breakfast," the Silent Wolf commanded. "I am already very hungry now."

He smiled at her and for her life she could not keep from laughing again, so full of merriment his smile was and so bright his eyes, and he laughed too.

"You are better to look at when you laugh than any woman I ever saw," he told her.

This frankness made her blush and she hastened away saying, "I go to send Ling to you and your food."

So she went away and the Silent Wolf strode back to his room very well content, and when Ling came in a little later with a mighty breakfast of meat dumplings and sweet dumplings and rice and fish, he told him all that he was to do, and Ling was pleased beyond speech. All he could do

"I decided to be perfectly frank about them"

butchershop and if it is old so much the better, and when the lid is lifted, they will smell the offal and close it again." He laughed gaily. "A good trick is worth doing well," he cried.

"And then?" she asked.

"Then we will have a funeral procession," he declared. "You must be the chief mourner," he said, "and your old nurse. And I"—he grinned with pleasure in his plot—"I will be the husband of the young dead woman, who died of—of—of Heavenly Flowers—"

"Smallpox!" she cried. "Yes, they will be frightened of that."

"And those dead of Heavenly Flowers are very foul," he said.

They laughed together and Leone thought to herself, half startled: How long it has been since I laughed!

"Now," the Silent Wolf said in yet more triumph, "we will not do it this morning for they will be watching every gate the first morning, but we will do it tomorrow before dawn, at the time when coffins are taken out. But first where is a man to go and find me the offal and the lime and all I need?"

"Ling is the man," Leone said, "for he is a slippery, clever fellow and can make himself narrow enough to go through a keyhole, I think." Then she thought of Mrs. Shipman. "Oh, and I will bid him manage somehow to bring the Old Foreign Mother here today, and she will be another mourner."

was to bob his head up and down and say over and over again, "Eh, that I will—I know how to do that—I can—"

"Do it then," the Silent Wolf said, his mouth full of meat dumpling.

**N**OW Leone would not let Jenny be waked and Jenny slept on and on. That she was not fallen into a trance again was clear enough, for she turned her face, sometimes and smiled in her sleep and sighed peacefully and went on sleeping. Leone and the old nurse both looked at her again and again and whispered together whether they should wake her or not, but the old nurse shook her head.

"It is better not to call back her soul before it wishes to come," she whispered. "You can see it in some happy place and it lingers there."

Leone took Jenny's white wrist delicately between her fingers and tested her pulse and found it strong and so she nodded her head to agree with the old woman, and they let Jenny sleep on. But either the old woman sat in the room to be there when Jenny waked or Leone sat there, and so the day wore on to mid-morning and to the hour when Mr. P'an always rose. He washed himself and rinsed his mouth and ate his little bowl of rice gruel and sat alone for a while in his study. Then he decided that he would send for Leone, his granddaughter, and tell her what the Silent Wolf had said concerning his wishes toward her.

He was prepared for her first refusal but he was determined that in the end she must not refuse. Therefore when he had straightened his little beard and smoked his water pipe a while longer he clapped his hands and when a manservant came running in, he said:

"Tell my granddaughter to come here to me."

"Sir, I will," the servant replied and went and told Leone's nurse, who was combing her gray hair. She had the tail of it between her teeth while she bound the black cord at her neck.

"Tell your mistress the Old One wants her," the man said.

The nurse ran at once, her hair still in her teeth and told Leone, who sat in the room with Jenny.

"Your Old One wants you," she said.

Leone rose in alarm. "Has he heard?" she whispered.

"How do I know?" the old woman said, and now remembered the tail of hair in her mouth and took it out and held it. "There are always too many in a big house like this," she said. "It may be that he knows. Well, he cannot kill you my sweetmeat, and so do not fear him. Old scholars can only make a big noise however angry they are. Their galls are small."

**S**O SAYING she sat down to take Leone's place and Leone went slowly toward her grandfather's study, preparing herself for his anger.

How surprised was she, therefore, when she entered that room half fearfully to see that old man sitting in his chair, his face wrinkled in smiles! Could he be pleased, she asked herself amazed, at what was now going on under his roof? It must be that he did not know, she told herself, and so she sat down and thought that she would not speak of anything until he did.

"You sent for me, Grandfather," she said gently.

"So I did," he replied, "and it is to tell you some very good news. It is true that there are obstacles in the way but these doubtless can be put aside. That is, Heaven's will can be done if men but have the will to do it. I am not one to say that anything is impossible, and while I wish no one dead, I know that Heaven has its own ways of removing those who obstruct the destiny of the ones it loves."

This the old man said without once stopping to take breath, and listening to him Leone could not make out its meaning any more than if it had been wind passing through pines. So what could she do except to nod her head in agreement.

"Yes, Grandfather," she said, in her soft, pretty voice.

The old man pulled his beard twice and coughed once and then said in a loud voice, "In short, he wants you for his wife."

She was so bewildered by now that she could only open her eyes wide. "Me, Grandfather?" she asked faintly.

"Yes," Mr. P'an said firmly, "and I say you must marry him for you will never have a better offer."

"But, Grandfather," she faltered, "who—who—"

"The young man," he said impatiently, "the one who changed clothes with the foreigner—who else?"

"The Silent Wolf!" she whispered.

"Well, that is only his nickname," the old man said pettishly. "He has other names."

He pulled his beard again and she sat staring at him, too much astonished to speak.

"Well, speak!" he cried at last.

So she stammered forth, "B—but, Grandfather, I am married. Arnold—"

"That marriage!" he snorted. "Well, it will be easy enough to—it never was any sort of a real marriage so far as I am concerned. How can a marriage to a foreigner—it can be managed, doubtless. I will pay

## NEED A LAXATIVE?

### TRY THIS HEALTH DRINK INSTEAD

Juice of 1 lemon  in glass of water  first thing on arising 

Has a natural laxative effect for most people, and it aids digestion, supplies needed vitamins, builds resistance, too!

Here's a surprisingly simple way to avoid the usual harsh laxatives.

Most people find that the juice of one lemon in a glass of water, taken first thing on arising, is all they need to insure prompt, normal elimination—gently. And lemon and water is good for you.

**Lemons Build Health!** Lemons are among the richest sources of vitamin C, which restores energy, helps you resist colds and infection. They're the only known source of vitamin P (citric) and

supply valuable amounts of B<sub>1</sub>. They alkalize—aid digestion. Millions not troubled with constipation take lemon and water daily just as a health builder.

**Why not keep regular** with this refreshing morning drink that builds health too? Try it ten days, first thing on arising—see if you don't benefit!

**P. S.—LEMON & SODA** • Same prefer juice of 1 lemon in half glass water with ¼ to ½ teaspoon baking soda (bicarbonate) added. Drink as foaming quies.

Keep regular the *Healthful* way!  
**LEMON and WATER**  
...first thing on arising

"Today at the Duncans"—CBS, 6:15 P. M., E. T. — Fridays

## It's Spring!

### Get your car in tune, too!

Just because you're driving less, don't think you can forget about your car's annual Spring tune-up. War-time driving makes a Spring tune-up more important than ever.

See your service man for a Preventive Service check-up. A P.S. check-up will tell

**P.S.**  
PREVENTIVE SERVICE

Sponsored by Collier's  
for Motor Car Owners

you what's wrong with your car—what's wasting gas.

Send for the **FREE P. S. Check List** today. This is the form that helps your service man tell you just what Preventive Service is needed on your car now—and what can wait.

To get your P.S. Check-List, merely write to Collier's P.S., 250 Park Ave., N.Y.C.

## FOOT AND LEG PAINS?

Rheumatic-like foot and leg pains, tired, aching feet, sore heels, or callouses on soles, may be due to weak or fallen arches. Dr. Scholl's Arch Supports and exercise help give relief by removing muscular and ligamentous strain—the cause of your pain. Adjustable to aid in restoring the arches to normal. Can be changed from one pair of shoes to another. Expertly fitted at Shoe, Surgical and Dept. Stores everywhere. **FREE** foot booklet, write Dr. Scholl's, Inc., Chicago.

**Dr. Scholl's** ARCH SUPPORTS

There is a Dr. Scholl Foot Comfort Appliance or Remedy for Every Common Foot Trouble

him off. Besides, you told me you would never go back to him."

"No, I will never go back to him," she echoed. "But—but—I don't want to marry anyone, Grandfather. I want to stay here and live with you."

"Now what sort of talk is that for me to hear?" Mr. Pan said violently. "Am I a foreigner that I allow my own daughter's daughter to live unwed? Is that my duty to you? An unmarried woman is a disgrace in any family, whether she is stubborn or she has a secret disease or the family does not do its duty. No, I will not have you unwed when here is a good son of Han that wants to wed you. You shall do it—or I will have you no longer in this house."

NOW he was angry, and she saw it and what could she do? She could only soothe him because of his age and so she said:

"Grandfather, let us not talk of it now."

But how could he be soothed? He refused her gentleness and when she saw his old blood mottle his yellow cheeks she made up her mind quickly to tell him about Jenny so that he might be diverted from his dear plan of marrying her away quickly, whether she would or no.

"Grandfather!" she said, and she made her voice very firm. "Indeed, it is no time to talk of marriages now. We are all in grave danger." She leaned forward and whispered: "Last night the foreign girl came here. She and the Old Foreign Mother escaped together, but the Old Foreign Mother is hiding elsewhere."

Now she saw him forget all else indeed. He put on a look of horror and he gasped: "Yet another foreigner! Why is it they all come here to my house like bees swarming into a hive?"

"She is very young," Leone said quietly, "and she has been very ill. But we have plans to get her away tonight."

"Today," old Mr. Pan said violently. He rose and began to walk back and forth in the way old scholars walk, planting his feet with the toes out and swinging his robe from side to side.

"No, not until tomorrow morning, Grandfather," and to quell him she said, "The Silent Wolf has planned it all."

Now nothing indeed could have quelled him like that name and so he sat down again.

"Well, if that one is doing it, perhaps it can be done," he said more mildly than he had yet spoken.

"Let me tell you the plan," Leone said, and so she told him. He cried out sharply when she said that his precious coffin would be taken out of the house, and so she made haste to say:

"We will send it back again, Grandfather—it will not be gone above a few days, and we will send it back empty, saying it is a new coffin ordered from Naziang where the coffins are so good."

"What if my day to die would be while it was away?" he asked in some fear.

She smiled at this. "Your day to die is a long way from now," she said.

So she mollified him and indeed he forgot all else except his anxiety to get the foreign girl away, and he said:

"As for me, I shall not stir my feet from this room until she is gone. If any must talk with me let him come here. But tell me no more than I must know. And do not come here and tell me at what hour you leave and tell me nothing of where you are going, either."

He sat thinking for a moment. "You say you and that Silent Wolf are going together?"

She saw his cunning old mind at work again and she blushed deeply. "Grandfather," she said, "put that thought away from you. We have work to do."

He did not answer, but she saw a secret smile hiding in his beard and so she rose hastily and said, "If there is nothing more,

Grandfather, I will go about my business."

"There is nothing else," he said, and she saw good humor come out of his eye again, and so she hastened away all the more quickly, lest he speak out what the good humor meant to him and so make her ashamed still more before the Silent Wolf.

When she went again into her own room she found that while she was gone, Jenny had waked. The old woman was standing by her bed holding a basin of steaming hot water.

"She waked easily and sweetly as a little child," the woman said with pride, "and I have this hot water here for her to wash with."

"I will help her," Leone said, and she hastened forward. There Jenny's face was upon the pillow smiling, and her eyes were as blue as a kingfisher's feathers.

"Do you feel yourself?" Leone asked and she could not keep back her smiles even in the midst of her secret pang at this girl's great beauty.

"I feel nearly as well as ever," Jenny said. "Only my legs seem not quite to be long to me yet. But my head—I feel quite clear. And I remember everything. Then she looked grave for a moment. "Has Mrs. Shipman come yet?" she asked eagerly.

Leone shook her head. "Not yet," she said, "she will come today."

She took the hot white towel out of the steaming water and wrung it dry and began to wipe Jenny's face and hands gently. "How beautiful your skin!" she murmured.

The old woman watched her. "What does this foreigner put on her skin to make it so white and smooth?" she asked.

"She was born thus," Leone replied.

This astonished the old woman well enough. "Do they come out of their mothers' wombs this color?" she cried. "I thought they put something on themselves to fade their eyes and skin and hair."

Leone laughed and told Jenny what the old woman said and they all laughed, and the old woman, encouraged, went on:

"And I have heard some say that these foreigners reverse human nature and are born with white hair and it grows black with age."

THE two girls laughed again, and in the midst of all this danger and trouble somehow it was sweet to them to laugh together, and it was sweet indeed to Jenny to know that she was alive and out of that fearful house.

Only when she had eaten and after the old woman had brushed her hair and she lay ready for what must come next did her face shadow. Leone, watching its every change asked:

"Why are you sad?"

"I have to forget so much," Jenny said. She covered her face with her hands. "I want to forget everything of these last months."

"You can forget," Leone said most kindly, and then bit by bit she unfolded the plan that was being made that day and Jenny lay and listened without a word while Leone told her everything, and how it was planned that she and Mrs. Shipman were to escape.

"And after we come to the village, then what?" Jenny asked.

Leone flushed and her heart ached, but she paid no heed to that heart of hers. She said bravely: "Daniel James is there—waiting for you. I think you will be safe enough."

The two girls looked at each other and in that instant Jenny saw Leone's secret clearly. She put out her hand and took Leone's hand and held it.

"I must thank you for everything," she said softly. "And I will—as long as I live."

Now Ling had spent his whole day at one place and another, to find out in any way that he could what had become of

the Old Foreign Mother. First he went to the teashop near the Japanese compound sitting himself at the smallest table in the dimmest corner, he listened to the gossip he heard about him. But he heard nothing except that the foreign girl had escaped somehow and that the Japanese Shigo Yoshi was in such a torment of rage that he bit his own fingers until they bled. He tore the curtains at the windows and behaved as though he were mad.

At the second place Ling went, which was a bean-curd shop, he heard that in the Japanese compound an old woman had died. He was uneasy then until he bethought himself of a way to find out who she was. He bought a tenth of a pound of pickled bean-curd and while it was being wrapped in a lotus leaf, he said carefully:

"These little devil dwarfs, they do not bury their dead decently. I'll swear they burned the poor old woman who died, yesterday."

The man who was wrapping the bean-curd said innocently. "That they did. I heard it from one who had heard it from the cook there. He will not buy his bean-curd from me, because he has a fifth of sin in the shop on the next street and he does not get benefit from him, but it told me that the cook said that they burn the old woman to ashes and put her in a bottle and sealed it to return to her country."

Then Ling knew it was only the old Japanese woman who had died, whether by his poison or by Shigo's anger, who was? He was sorry if it were by his poison, for he was averse to taking any life and he had tried most carefully to poison her only so much as would let the prisoners escape. But still he was not sure enough to be sure that the Old Foreign Mother was not also dead.

While he was thinking of burying and dead he bethought himself of a coffin maker who lived near by, and it came to him that since this man was near it would be the likeliest place to order a coffin if one was needed. Thither he went then, chewing his dried bean-curd as he went, and he entered the coffin shop and found the old carpenter busy with his plane and his foot rule thrust into his collar.

Now when Ling came in he made his sign, but very small, so that if the coffin maker did not belong to the brotherhood he would not see it, and if he did he would know it and make the sign, too. The coffin maker had very shrewd eyes deep in his face like a monkey's eyes, but he was sure he saw that sign when Ling made it, and without speaking he made the sign. Then Ling knew that he could speak freely and so he did.

"I am sent here to ask if there has been an order for a wide new coffin within

the last two days," he said in a whisper.

The coffin maker answered in the same low whisper: "There has been. I was given the order from a Japanese and I was told to work all night and finish it—a cheap coffin made of the least good wood, boards nailed together, they said, and when it was finished it was night and my son took it there and what went into it we do not know."

"What was its size?" Ling asked.

THE man pursed his wide lips and remembered. "It was so long," he said, and he measured a space on the wall with his rule. "And it was twice as wide as the usual coffin I make—it was as wide as this—" and he measured another space on the wall.

"Was it so?" Ling murmured aghast. Now who in that house could need so wide a coffin, except the Old Foreign Mother, and for whom else would they order so cheap a coffin?

His heart dropped down and he said sorrowfully, "Thank you, Elder Brother, you have told me what I feared." And he went away, knowing very well that the Old Foreign Mother was dead, and who knew where she had been buried?

All that day he busied himself with the things which the Silent Wolf had told him to prepare, and as he was busy he tried this way and that to think how he would tell Leone the old white woman was dead, and he wondered whether she would blame him.

"Yet had I stayed, all would have been lost," he still told himself stoutly, "and perhaps three of us killed."

So he could not find anything to blame in himself over what he had done and he went doggedly through the day and when night came he gathered everything together that the Silent Wolf had commanded. Last of all he went to a butcher-shop at the other side of the city where none would know him, and he asked for offal they had cast aside, saying that he had a pet bear to feed, and he told them he was a traveling actor with the bear and he made little money in these times and could not buy good meat. They took his few pence and pointed to their offal hole, and he dipped up some of the half-rotted stuff into an old jar he had bought for it and went away with it quickly, holding it to windward of himself.

When darkness fell he went to the Silent Wolf and laid everything before him, and the Silent Wolf examined all, and praised him and said, "You-you have done so well that from now on I command you to stay by me always and be one of mine."

"I will, indeed," Ling said joyfully and was then and there rewarded for everything he had done.

(To be continued next week)

"It's not so hard to tell them, really. Now the one on the left is something high up in the Army and the other's a lieutenant commando"

COLLIER'S

## MANPOWER

**T**HIS war is too big for human comprehension. The requirements of an all-out global war are so vast and so complex that no man has the knowledge or the wisdom to forecast accurately what will be the most pressing needs of even a few months ahead. To balance accurately even the types of fighting materials, airplanes, ships, tanks, submarines, antisubmarine weapons calls for prescience that stretches to the limits the capacities of the most highly gifted military leaders.

To fit these military needs into the living necessities of a civilian population that must live and produce prodigiously if the fighting men are to be supplied calls for wisdom of the highest order. To perform these Herculean tasks and at the same time to reconcile conflicting claims of various groups and particularly of their political spokesmen, who are not always disinterested patriots, adds to the difficulties of the problem.

This, essentially, is the underlying reason for much of the confusion over manpower policies in Washington. Paul McNutt has the responsibility for applying the policies determined by the Manpower Commission. Neither Paul McNutt nor anybody else in Washington or in any other seat of authority can

do more than estimate future urgencies. Both Paul McNutt and all others charged with responsibility in a democratic country have to take into account the feelings and the attitudes of powerful political groups including farm and labor leaders.

But the fact is that the public has been and is gravely disturbed by the variety of statements about manpower for war that have come out of Washington. Men of military age especially have been confused. The President's 48-hour week helped to clarify the situation, but much more remains to be done.

First, a group of citizens of the eminence and of the intelligence of the Baruch rubber committee should make a quick and thorough analysis of exactly what American war effort requires during the next year in the way of men under arms, labor on the farms, labor in factories and in various essential civilian services.

The disinterested factual approach of ex-President Hoover's testimony before Congress exemplifies the constructive spirit in which this should be undertaken. A simple, competent report on manpower needs would be received as enthusiastically by the public as was the Baruch rubber report. Ameri-

cans will cheerfully and willingly make any sacrifices which they believe to be necessary for the national defense.

Once this convincing analysis is made, special legislation would naturally follow. In a matter so important, laws are better than directives. In particular, it will be necessary to revise some labor legislation. Men forced to get war jobs ought not to be compelled against their wills to join unions. Certainly they should not be subjected to the exacting of the racketeers who have operated in the building of Army camps.

Finally, we need a national policy that keeps the fighting front and the civilian front adequately supplied with man- and womanpower. We have so many men and obviously they must serve where they can best serve the national interest. The man doing his best making munitions, producing food, doing anything else essential to the national defense might well be given insignia to show that he is performing his assigned duty.

If Mr. McNutt makes his appeal on the basis of simple, clearly understood and obviously sound policies, Americans will respond with energy and enthusiasm.

## "You Help Someone You Know—"

**T**HE USO has now passed its second milestone: and we think it merits a loud round of applause for what it has done and is doing for the men and women in the services and the war plants.

United Service Organizations, Inc., was formed by the Y.M.C.A., National Catholic Community Service, Salvation Army, Y.W.C.A., Jewish Welfare Board, and National Travelers' Aid Association. The fears and misgivings that attended its birth were dispelled at least a year ago, and it is turning in a huge,

splendid and smoothly-functioning performance.

In a typical recent month, the USO reported: Group activities including 24,896 groups and events, 65,072 sessions, with a total attendance of 5,979,524 persons; services to individuals—906,188 information aids, 92,280 persons advised, 9,200 individuals or families receiving case-work service, family hospitality arranged for 68,910 persons, 47,173 hospital patients visited, more than 6,421,115 USO envelopes and pieces of stationery given away, 84,504 books

loaned, 324,842 magazines and 181,101 pieces of religious literature distributed.

The organization is active at this writing in 48 states, the District of Columbia, and 16 U. S. territories, possessions and off-shore bases.

All this is Service with a capital S—and service to men and women who need the USO's varied services.

"You help someone you know when you give to the USO," as the USO slogan has it. In our opinion you can't give too often or too liberally.

## Rickenbacker

**C**APTAIN EDDIE "INDESTRUCTIBLE" RICKENBACKER came back from his latest bout with death and at once began to talk loudly and often about the evil of absenteeism in war plants, the outrage of strikes in same, and the likelihood that returning soldiers will not relish the idea of the government's making them join unions in order to get jobs.

The reaction in radical and left-wing New Dealer circles was typical. Instead of attempting straight answers to Rickenbacker, a smearing campaign got

promptly into high gear. Rick is called a hidebound, antilabor reactionary and other fighting names.

We think most Americans are weary of these tactics. Americans like fair play and hate unfairness. Some, at least, of the heavy anti-New Deal gains in the elections of last November 3d happened because so many people were tired of hearing various candidates blackguarded and defamed.

As for Rickenbacker, he is saying nothing that a lot of other people are not also saying. War plant

absenteeism without cause is the dirty outrage against our fighting men that Rickenbacker says it is. War plants should not go on strike, and that is that.

We think it is time to call off these smear campaigns against persons who don't invariably sin with the New Dealers; and it is time to be making frank, honest answers to the contentions of those persons when there are such answers, and try to remedy the conditions complained of when there are not.
